### South African Diamond Mines.

a general description of the methods of mining in these dismond-fields, the articles having been from the pen of Mr. Williams. In recent numbers of the Press we have given with his family, to go to take charge of the De Beers mine in the Kimberley diamond-fields of South Africa. Mr. Williams goes out as gen-tral manager under two years' engagement. Gardner F. Williams, for many years identi-fied with the hydraulic interests of this State, left his home in Oskland on Thursday last,

employs about 2000. There are only about 200 to prospect or to work. The trip is a very ex-pensive one. Most of the men employed there are natives, of which the De Beers mine alone are no place for people to go to from here, either to prospect or to work. The trip is a very exground comprises about one acre in extent only. Mr. Williams states that the diamond-fields in the famous Kimberley mine. This piece of evail yeaf areed ed to tant-enim elodw evil you quequoo done T a mon besadoung este barong to quits a suffice to so monition that a bar The De Beers mine is one of the largest in Africa and is valued at about \$25,000,000.

The company have diversed all of the ground in the immediate vicinity, forming one

grace. They are pretty good workmen for the shout four or five days in a week with a good to 300 white men who are mainly contractors, overseers and guards. The Kaffirs only work

runs quite even, and the general average of the diamondiferone material is about as etated. In fact they isld will be 14,000 loads a day, Each load is 16 cubic feet, and each yields, about 14 carats of diamonds, worth say 20 shillings a carat. The ground they will have a hoisting capacity of about other shaft will be sunk 800 feet. - One of these is now down 600 feet. With all the shafts shafts will be sunk to the 700-foot level. is 537 feet deep vertically and 600 feet deep on the incline. Mr. Williams will sink a new staft with two double compartments; these three loads are hoisted in each skip. The shaft running in these shafts, they have been able to hoist 1900 loads in 10 hours, each load consist-ing of 16 cubic feet of diamondiferous material; dends last year, working only a portion of the amine, but they now have all the ground, as stated above. Out of a 5x7 shaft they hoist 3400 loads a day, besides sending down all the material, men. etc., but the present arrangement is very inconvenient. With two small skips is very inconvenient, they have been able to running in these shafts, they have been able to plass of work they do.

The De Beers mine paid \$1,000,000 in divi-

new shafts, almost a whole forest was cutdown, the forests being very small, and the Govern-ment forester prevented any forther cutting on this trace, so that portions of the timber had to No timbers are used in these mines, except in the shafts, timber being very scarce in that country; in fact, in obtaining the timber for the every day, the outpur being very uniform.

convenience for working. claims and made single mines of them, better small tracts. Mow, however, they are owned by companies who have purchased all the small The native workmen, however, find no inconvenience in this, Most of the mines in the Kimberley fields were formerly owned in very four months of the summer are exceedingly hot. that for eight months in the year the olimate is not as disagreeable as many suppose, although bring the water 20 miles, piping it up 600 feet and then piping it down. Mr. Williams stated then by robbing them atterward. A railroad now runs from Cape Town up to the Kimberley mines, 640 miles. Water is brought into the two mines by the Kimberley Waterworks, who England; that is, by leaving roofs and pillare and the same as adopted fin the hematite mines in be secured from private owners. ico, the Germans and other European residents confine themselves mostly to merchandising, very few of them bothering their heads about with some small interests elsewhere in these vast regions. But these interests count so little, all told, that the ever-slert Briton may be said to have possessed himself of the mines in these south-lying'republics; for here, as in Mextones as outh-lying'republics; to there, as in Mextones the mines in the said to the said of th little toothold in the United States of Colombia, control in nearly all large mining operations, which, it is needless to say, are in these countries numerous and important. During the past to wasts the Morth Americans have got some test parts to the Morth Americans have got some test to the the Morth Americans and the contribution of nodon. In Central and South America the English

to increase rapidly in the future. ightened policy being pursued by that country and the extension of railroad facilities, is likely per annum, a sum that, with the present en-American countries, being also large mine proprietors. The Republic of Mexico is now producing bullion at the rate of \$26,000,000, people sharing more equally with the English the mining industry, the Mexicans themselves, contrary to the usage in most other Spanishmines or mining matters.
Coming north into Mexico, we find here our

yields probably the largest percentage of gold.

Our placer mines give decidedly better returns
than those of Australia, for the reason that
while they are quite as rich, we have more amless cost than in California, though our quartz very marked for some time hereafter. Owing to an abundance of cheaper labor, quartz is being milled in Australia at somewhat undergone a slight increase, and, as quartz operations are now being largely extended, there is reason to expect this increase will be been arrested, the gold yield of the country has and continued so to do for a period of more than 25 years. Latterly this decline having no list of asged silertenA to touborq aoilled mormons output of gold following 1851, the contains an immense extent of goldfields, every-thing is, of course, in the hands of the English. After having for a number of years made an In Australia, which, in its several provinces

being owned exchasively by Russian subjects and largely controlled by the Government. Owing to the nature of the deposits, not much capital has been invested in these mines, they than five or six months in the year. No foreign deposits are rich, but cannot, owing to the severity of the winters, be worked for more ate of about \$22,000,000 per annum. of allavial or placer deposits, are yielding at the ple supplies of water for working them.

The gold mines of Siberis, consisting mainly

addition to the world's stock of bullion \$200,ver; Australia, \$24,000,000, all gold; making the America, \$15,000,000, 60 per cent silver; Mexico, \$26,000,000, all but half a million of it sil-Africa, \$5,000,000, all gold; South and Central this can in no proper sense be called bullion, it is not included in the above total. Europe, \$9,000,000, 80 per cent of it silver; Asis, Si-borist included, \$55,000,000, the most of it gold. 000 of silver. Of the annual bullion product nearly credited to this country, over \$18,000,-000 is composed of copper and lead. But as which \$37,000,000 consists of gold and \$58,000. United States of North America, Alaska and British Columbia included, \$95,000,000 - of world may be set down about as follows: The capital is required for working them. Summarizing results, the gold and silver yield of the leading bullion-producing conntries of the

CORRUGATED IRON CASES.—Casks made of corrugated and galvanized sheets are now becoming the transport of the transport of inguise and galvanized sheets are now becoming injudied which are liable to expand considerably with a rise of temperature. They are lighter than wooden ones, and last much longer, lighter than wooden ones, and last much longer. The corrugations of the sheets urn parallel with the hoops, which are either iron bands lined with wood or fron fabric the bung and spliced, while the bung and spliced and soldered, while the bung and spliced bolds are provided with serew plugs. They can stand an internal pressure of 30 pounds to the seare provided with serew plugs. They have stand an internal pressure of 30 pounds to the standard an internal pressure of 30 pounds to the standard and internal pressure of the seare provided are now being used for the and quite recently also for beer.

WILL KING IRON BE DETREMENTED?—An eminant scientist prophesies that iron, which is now anch an indispensable condition of all manufactures and commerce—the foundation of all increased commerce—the foundation of all increased chain of social intercourse which keeps grand chain of social intercourse which keeps are need together, will eventually be determed, and another will sake its place. This prophet holds that iron will be "as completely superseded as has been the stone of pletely superseded as has been the stone of the Aborignes." What is to be its successor?

TESTING CAST-RON PIPE.—Cast-iron pipe oan be tested for unequal thickness by being rolled slowly over level stitle by a single operator. Tolled slowly over level stitle by a single operator in the test position to get away should be allowed, in fact, be sided in, the bendency. The best place to do this is in the the upper state of the importance of this were the tipe factory, before the upper sample into the test path, and if the importance of this were the large of this world be done.

IRON CARS.—Some hundreds of railway care, almost wholly of steel and iron, are being built in England for Hindostan, in the expectation that they will prove less perishable in that climate they will prove less perishable in that climate they will prove less perishable in that climate than care of wood. The time will soon rail saids from upholstering which will be employed in the manufacture of all first-class care.

Tur American Institute Fars.—Hectrical machinery will be the chief feature in the next fair of the American Institute, in New York City. The principal manufacturers of electrical appliances in this country have promised to appliances in this country have promised to appliances in the Third rate almost half of the space in the Third avenue building. No prizes will be offered.

instance, 700 pounds of cosl are required to melt 500 pounds of metal by the present processes. Now in those 700 pounds of only 256,000 heat units, and yet only 256,000 heat units are required to melt those 500 pounds of metal. Here is a waste of nearly 10,000,000 heat units in one obarge of the turnsce—all gone up the chimney, completely squandered. Thus 97 per cent of the heat value of the oaal is wasted. This should be stopped by a resort to gas, or This should be stopped by a resort to gas, or greatly reduced by more improved processes for but of the total. The Power Required for Modern In-MECHANIGAL PROGRESS.

High they work that the state of the process of the state A LOCOMOTIVE WITH PROULIAR FEATURES.—
The Hinckley Locomotive Works, Messcabnsetts, are building an averses locomotive with a
single pair of driving wheels. It is intended
to use it on the "Flying Yankee" hash train to use it on the "Flying Yankee" hash train which runs over the Boston & Maine and
Maine Central roads. It possesses many peoulist features that are experimental. All the difffoulty of slipping drivers can probably be overcome by the use of the sand blast now successtally used on many English roads and underginey trial on the Chicago, Burthngton &
Quincy. The sand being thrown on the rail
before the wheel reaches it. Experience in
England goes to prove that the sand supplied.

MORE COMBINATIONS.—It is reported that another in manesely powerful syndices is in another immensely powerful syndices is in progress of formation, and this finne for operations are Seastor Payne, Seastors Burke and Edichie of Obio, Ersagus Wyman and A. McLaren of Obio, Ersagus Wyman and A. McLaren of Obio, Persagus Wyman and A. McLaren of Obio, Persagus Wyman and A. Debe to richest iron country in the world. The rapid of the compiler is to secure the countriol of all the known valuable iron deposits in Canada, nove the news of paties of the syndicate, which is already pledged. The synthiates of which is salt-and was allow over 100 properties in the world. The synthiates of the properties in the world. The syndicate, will own over 100 properties in different parts of Canada. Great mineral distances is suit, and on the control and enhance prices, and to need to obeapen produces, it is quite con other employed to out on trol and enhance prices, and to heece out operators of smaller capital.

AT a special meeting of the Board of Trade at Los Angeles, resolutions were adopted faround to the project of a standard gauge railroad from Salt Lake City to the Angeles, and piedging the support of the board in carrying out the plans proposed by the projectors at Salt Lake,

Peat and its Uses.

Translated for the Parss from the French by M. M. M.

in see which are at present made of this coal in formation. We know that it is the only fuel of chemones peasant. Now, thanks to M. de strion at the only seeded of the Ardennes peasant, you legation at the ansate, we can indicate some of its various mass. Turf is now worm in veets, shawls, and clothing of all kinds. M. Barand, a Limbourgeois, has given his rame to a kind of these nour general method of these nor seed that a special seed of the source of the seed of seed nases which are at present made of this coal in formation. We know that it is the only fuel Concerning the utilization of turt or peat, the Independence Beige says: While our tourbiere (turt-pits) of the Yagne are slowly burned, it is not without interest to recall the principal and without interest to recall the principal.

Like cotton. A the trust between the same made and adde the lorgune or its inventor. The Trike and of them cloth is man, and so them cloth is man, and of them cloth is man and in supersone. The tiesue inoresees in flexibility and is deperatore when the betandine is min. Fig. 4 with an equal quantity of wool or cotton. Make for each as office-cappets, curtains and voltains for apartments and parlor carpets, ordinary coverings, contain 30 per cent. With 10 per cent or capets, outlains for apartments and parlor carpets, wool, they make from it blankets for poor tamperson, wool, they make from it blankets for poor tamperson, and wool, they make from it blankets for poor tamperson, of wool, the demand for beaudin as adments and captured of wool, the demand for beaudin as admentally seed and horse-cloths. At each rise in the price of wool, the demand of the capture of the same, would be activable only of the capperson of the same, would be actively the same of the countries of their beauges of this pet of the same, would be actively and purity, and the same, would be actively and purity, he cause of various disease. The other same, would be actively and the evening the overing an unwholesome of their colleges, the cause of various disease. The horse labories and does not tain the fash nor seen in the capture, and also the properies of particular despites of past into orderson. A French physician has recently received a patent for the discovery of the properties of past.

Origin of the Indicator.

The origin of the steam-engine indicator is not clearly upon record. That Watt knew of and raed it in a more or less completed form is cornaded it in a more or less completed form is problematical. In the following description of the instrument, from his own pen, for which we are indebted to the Boston Journal of Comrances, it will be seen that he does not directly claim it as an invention of his own. The instrument was, of course, designed for use upon strument was, of course, designed for use upon a congines in which the work was nearly all done as one helow the atmospheric pressure, and were congines in which the work was nearly all done at or below the atmospheric pressure, and were graduated by the use of the barometer, and were graduated by the use of the barometer, and were graduated by the use of the barometer, and were graduated by the use of the barometer graduated by the use of the barometer.

About the first suthentic allusion to the in-diotor which we have been able to find, says the Journal, is an appendix written by Mr. Watt to the article upon the steam-engine in Robinson's "Mechanical Philosophy," pub-lished in 1822, in which the indicator is referred to as follows:

Hards the extinct of the stranger of the stranger of the protocol of the protocol of the contents of the conte

Labor-Saving Machinery.

The introduction of labor-saving machinery, people of several production of labor-saving machinery, been, more or less, opposed by employes, nuclear the impression that in some way it was going the impression that in some way it was going to be diseatons that in some way it was going such ing their wages or depriving them of labor should be diseatons to the case, At a council of manu-saving said that the the case, At a council of manu-saving said that the the case, and that the production of cloth per nanufacture that the production in a period of some dy years the operatives had risen in the same time fully the natural result was reached by using the dy operative had to manufacturer in the same time fully the natural result was reached by save worked out by a thorongh statisticiar. And should be expected. For example, supple, supposing a fabrul that the one assing dispose of three times this production might be increased to and the such that the supply the open the same in the same times the supply the count of his product. If he was obliged to extent to supply the open that the supply t

connot define the entering of the greater produced time.

But if labor-saving machinery be introduced which wind will easile the old number of hands to produce three times the amount of goods, it is avident that after the onst of production will be another that after the onst of production will be another the street of goods, it is another of the cost of production will be but also for an increase in the wayer is opened not only for a reduction in the wayer of goods, operatives. The facts produced by Mr. Akkingon, in a recent paper published by Mr. Akkingon, of the relation that one is a similar expensed by the maching the problems, which are see easy of solution, not stop to work out in this own when the interesting in the jumps at the conclusion that the introduction of any may now device to save labor is good under the public of the min a hardship by depriving ing to work for him a hardship by depriving ing to work for him a hardship by depriving ing to work for him a lardship by depriving in the form of the magne of any apport,

Wolf Creek.—Several placer claims have been ocsted lately on Wolf creek and rich gravel beds tre reported.

worked by drifting.

THE OLD DUTCH LEDGE.—This quartz mine was a ton in free gold, regardless of sulphurets, in which a ton in free gold, regardless of sulphurets, in which he aronk is very rich. It is on Powell creek near the heperate, Biglow has relocated the ledge and has a connect on the surface. Recent assays has opened the ledge with three tunnels, one of them has opened the ledge with three tunnels, one of them has peperate to tap the show that the quartz is improving in richness, and has the LEDGE.—Mr. Keissling is pushing work on the Knox LEDGE.—Mr. Keissling is pushing work on the Knox ledge, also in the Applegate country, and has tun a tunnel ras feet on a feeder work on the Rox ledge, also in the Applegate to the main ledge, taking out good pay rock at every foot.

PLACER AND QUART.—Jacksonville Times, Sept. 24; Miners are getting ready for winer, I. M. K. Lytle is engaged in crushing some one from the Roten ledge, which promises of from the Roten ledge, which promises in the Coff & Triplett placer unine in Bushy well. J. B. Hutch bas purchased for gason a bushy one on bush of the Lytle base some set and Mining and Mining and Mining and Mining and Mining and Mining the set of the Rote of the County, which are said to be quite inch. The Jackson county, which are said to be quite inch. The Jackson county, which are said to be quite inch. The Jackson in going down on the ledge where the rich ployed in going down on the ledge where the rich ployed in going down on the ledge where the rich ployed in going down on the ledge where the rich ployed in going down on the ledge where the rich hill subtime soon as the large well which is being the furnish the water supply of water. They will five them a good supply of water. They will be said to have a first-class mining claim in Grave also may as soon as the large well which is being several new claims will be opened during the rich will give them a good supply of water. They will new ledge district are on the will shop by Grant's pass never leading the next shop in the worked by distributions. A number of new months, and improved machinery employed altoge on the said of the new of the worked by distributions. The number of new worked by distributions, has commenced and is being worked by disting.

The DUTCH LEDGE.—This quarts mine was aton in the going worked by disting.

The DUTCH LEDGE.—This quarts mine was also in the going to go with an arears and paid \$25 and the place of supply with an arears and paid \$25 and the going and supply should state the supple supplemental and side supplemental s

MHOTESVIE.

San Francisco Metal Market.

THURSDAY, Sept. 29, 1887.

Quickelly Respond to the control of the control of

Mining stocks continue very dull indeed for a long stocks and prices are low. Meter a long time before has there been any and depression as now exists. The public seems have given up inferiest in the whole thin pave given up inferiest in the whole thin pave with speculative propensities seems in passed the steam of the properties of the particles and direction in the direction purchase of land or lots and dropped the hardwest.

Meantime, however, up on the Comstock the Meantime, however, up on the development. They are etarting up new mills and working their mines, apparently, for what there is in them, rather than for stock-market purposes. The output of ore is increasing, as is the bullion production, yet there is less public interest in the developments to-day than was the case when most of the mines were being worked as when most of the mines were being worked as stock-jobbing operations.

The San Diego Union says: John B. Farrell, amperinteendent of the Owens mine, located at amperinteendent of the Owens mine, located this city yesterday. He reporte the claim as looking well, and says that in a short time the working of the Old San Diego the will be renewed. Spesking generally of the miney interests in this county, Mr. Farrell says they are all doing pay work, and to be made valuable ore-producing properties all that is necessary is deep working.

MOTS.—Copies of U. S. and Foreign Patents furnished & VOTS.—Copies of U. S. and Foreign Patents (by mail to Potents and Poteign patents or telegraphic ordor). American and Foreign patents for Pacific Coast inventors transacted with perfect seourity, at reasonable inventors transacted with perfect seourity, at reasonable states and in the shortest possible time.

### Notices of Recent Patents.

worthy of special mention: Foreign Patent Agency, the following are Among the patents recently obtained through Dewey & Co.'s Scientific Press U. S. and

Foreign Ratent Agency, the following are overly of special mention:

Ore Coucentratore.—John A. Jones, Tusca-Ore, Mo., Wo. (No. 370,145, Dated Sept. 20, 1887, This is an improvement on that class of concentrators in which an endless traveling belt is carried by a shaking frame or table, the being fed on the entrace of said belt, to are being fed on the entrace of said belt, to gether with a stream of water, whereby the lighter or worthless particles are carried down in the intention of the belt, while the heavyer particles for carried down up by it and finally washed off below in a stank through which the belt passes. This inventor, to accomplish the desired movement, places a track, the farmes and belt may have in moven or corrugated surface, on the nature that the desired movement, places a track, wheels travel over the ententing table as track and one and the shaking table as track and hear the strack out the entention to the corruption of the suck arising to said by means of the other moved from side to saide by means of the other moved trom side to saide by means of the other moved trom side to saide by this inventor is to other method devised by this inventor is to other method devised by this inventor is to the orang frame. This movement, in addition to the orang tends to keep the ore in suspension, whereby tends to beep the ore in suspension, whereby tends to be or sulphurets are more effectively separated from the talings.

In the best or sulphurets are more effectively separated from the talings.

### Mining Tunnels Under Private Ground.

Hining Tunnels Under Frivate Ground.

The Supreme Court has handed down its decision affirming the judgment of the lower court in the case of the Amador Queen Mining Company vs. William Dawitt, the action becomen a right of way through a turner gelein and Murphy and land of since the right of way through a turney glock, and olsines the right of way through a mining men, as it involves the question whether than mining men, as it involves the question whether than the cometavy. The case has been watered by the Suprey on a sight of the company was the company which is affirmed by the Suprey of the company of the constructed, as the the trace of the right of way the the company of the compan

OUR miners are very much indebted to the Minute And Sourwritte Press, of San Francisco, the Rocky Mountain Mining Mew for copyling extensively from the Courier, and so aiding in fetting people know that we have a rich mining the Courier.

## A Paying Drift Mine.

ons week's labor, 60 men working, was 252 comees. There were several large and handsome some nuggets, and all was very coarse gold—as nice looking as any seen in Sierra county. have taken out \$10,400 for the claim, and two cleanups are yet to come for September. The cleanup, on the 19th of September, for the previ-September. This last payment returns to the cone safe of the contents of the cone safe of the cone of some dividends, aggregating \$21,000, and an-For four out of the past five months the Bald Mountain Extension drift mine, at Forest City, Sierra county, has been yielding hand-

mining; and when they started to work the extension of the famous Bald Mountain drift mine, he was one of the company who began eventually became an owner in a newspaper in that county. Being located in the midst of this goldfield, he naturally took great interest in Sierra county years ago to learn the printer's trade. He stuck to the printer's case, and an apprentice with the proprietors of this paper, and was originally taken by him to One of the owners of the mine was formerly

to those who go about it as a legitimate busiany other place in the world, men have oppor-tunities which few places offer. Energy, some judgment and judicious investment in gold-mining property is likely to yield large returns to those who we objust is as a lenitimete husiand after following one business for years, a venture on another may put it within his reach. In this State, where there is more gold than come to a man from the direction he expects it, for month after month it was all outgo. But finally the channel was struck, and now the mine is paying well. Fortune does not always there was a long succession of assessments, and For a long time, while the tunnel was being run for the channel, and the mine being opened,

ness proposition.

A correspondent of ours at Downieville writes as as follows concerning the mine:

it is expected that the output for the year
will reach the grand total of 500.

UNAECESSARY STRENGTH IN STEEL, — Mr. Wrightson, a prominent English ironmaster, Wrightson, a prominent English ironmaster, and deciares that he are never really called into play, steel which are never really called into play, and get a steel which will bend their minds to the quare inch, they would, he or 28 tons to the equare inch, they would, as believes, he really getting a material which would be of very much greater value than one would be of very much greater value than one many engineers specifications in in many engineers' specifications to nime in the contractions of the

Business of preserved and the friction is a consecuence of preserve, it is reasonable to presume that, other things being equal, sugine friction varies directly with the increase of pressure or varies directly with the increase of pressure on rate of capacity with the increase in the rate of expansion, and within moderate limits of change is not materially affacted by variables in piston speed. Experiments which have been made tend toward the same conclusions, but more data must be furnished before the except and the change in ordinates of working conditions, can be formulated and working conditions, as he formulated and the capacity of the change in stuffing-boxes and pistons in cylinates of steads and pistons in cylinates of such as a stuffing-boxes and pistons in cylinated by the case of steam-packed pistons.

MECHANIGAL PROGRESS.

First Principles for Young Mechanics.

Electricity-What is It?-Its Possible Future.

A well-grounded knowledge of the great law or principle of concervation of energy should be founded knowledge of the great law or principle of concervation of energy should be so taught with the multiplication table. It can be so taught if the teachers themselves are certain that there is in the universe only so much once than already existed. With a clear uncore than already existed matched and few a

HIGH SPEED AND WEAR.—It is charged against the blanks of the bight speed engine that it wests on the states that it wests on the sense usus separate This is true, but not in the sense usus speed engine. It sets itself to pieces "is not true, when the engine is properly designed and true, when the engine is properly designed and true at the speed it was intended it should be repeat the speed engine. The high-speed engine on the properly designed high-speed engine are actually less then those upon a low-speed engine. The high-speed engine wears out in one-half, one-third or one quarter cive more rubbing and for no other reason. The guides that have a cross-head moving back send forth 200, 300 or 400 times a minute will wear out in one-half, one-third or one quarter went back and forth 100 times a minute. The word fact of the dylinder, the connecting-road same is true of the dylinder, the connecting-road passes, the main bearing, and, in fact, every place on the engine where we went because of the engine where we went the engine where wear comes.—Wood passes, the main bearing, and, in fact, every place on the engine where wear comes,—Wood and Iron.

We hear or read almost daily of the wonders of science, and what is to be accomplished by electricity. "It is to be the great power of the future." Is it a power now? We may make it indirectly to drive machinery, we may make the indirectly to drive machinery, we may make use of it to prepel the care on our street roads, but is it a power in the sense that steam is a power, and our factories are power? Let make of this a few moments. We call steam a power, and our factories are driven by yellong a power, or we call water when falling a power, and we drive the machinery in other factories by water wheels. Where we have the it is and it and it is and other to tall it is milling the wind is our power; these and other sources of power may be eatled drived the may be called the wind is our power; these sand other sources of power may be eatled by maker which is our power.

primary of the metal countries and the state of the motor of the metal countries and in the metal countries and the countries and countries and countries and countries and

bam remarks that as to me which cannot be about a consequency of the electron of market that as to me which has not been divided, but rather as one which has not been the divided, and rather as one which has not been the constitution of market have been the scientistic and many minds from olden time strate many minds from olden time strate many cases architectural outcome constitution of market now recognized as different many cases architectural outcome and market now recognized as different many cases architectural outcome. The second market now recognized as different many cases architectural outcome.

The speaker next proceeded to ask and examine a figure of Atoma.

The speaker next proceeded to ask and examine what light the researches of Deltorian atoms have he are successful and the subject of Deltorian about the direction what Delton had regarded as implied the researches and conclusions of Losobmidt that the diameter of an atom of oxygen or nitrogen was only one ten-interteenth part of a centimeter was nitrogen or entired to the part of a centimeter was only one ten-interteenth part of the same. To put it in the part of the same. To put it in the part of the same. To put it in the part of the same. To put it in largine a stoms of an atom of a subject of the carring power we can distinguish only the one-forty thousands part of the example of the part of the part of the stoms of the stoms of the stoms of the stoms of another than the subject of the carring between a heap of small shot and a heap of oricket-balls.

In regard to the divisibility of atoms, Graphen each of the speculative ideas with regard to divided, but rather as one which has not been shown and the defined, not as one which has not been divided. The speculative ideas with regard to divided, but rather as one which has not been the constitution of matter have been the scientific relations of many minds from olden time to the present. ACTION OF SLICA ON GOLD.—Gold will only male at a comperators, as we all know, but what is not generally known, we all know, but what is not generally known, the Jeweleys Journal says, is that if we per cant of silica be added to the gold it can be melted over the flame of a common candle. From the same source the reader may learn that a pretty alloy, said to resemble gold extince and you platinum. The copper and platinum are covered first with borax and then with powdered charcoal and melted, then the since added, and the alloy thus produced is exceedingly malleable and can be drawn into the flacest wire, while it never tarnishes.

ACTION OF SILICA ON GOLD. -Gold will only

DISSIPATING THE SMOKE OF CANNONS.—The discovery, by Mr. Lodge, of the curious effect discovery, by Mr. Lodge, of the curious discovery, by Mr. Lodge, of the curious discovery, by Mr. Lodge, of the curious discovery, by the construction of an apparatus for the smoke derived from the discoverge of the smoke discoverge of ordnance of every kind. Mr. Lorrein procommunication with appropriate conductors as maploy an electrostatic generator in communication with appropriate conductors as a conductors, he prefers a light wire lattice provided with points that permit of obtaining vided with points that the sure disconductors, he prefers a light wire lattice provided with points that the sure disconductors. The generator rises he proposes is Wimshurst's, this being less silest the proposes is Wimshurst's, this being less may be placed anywhere, and be actuated by any being energy any permit of motive power desired.

Snow AESORPHON OF SULFHUROUS ACID.—
The results of the examination of snow taken from different places in Aunich and its neighborhood by Mr. Sendthen, says the Pharmar. Self of the could seem to interest Journood by Mr. Sendthen, has a considerable centical Journal (London), would seem to interest Journal London), would seem to dieste not only that snow has a considerable faculty for absorbing suppurous acid trom the atmosphere, but that the absorption goes on cortained that, on one day when now [ell, sulpraviously for some day when now [ell, sulpraviously for some day when new [ell, sulpravious acids were present in it in fairly equal proportions, but on the second day almost all the vicinity of chimneys and proportions, but on the second day almost all proportions, one day when so certained that, on one day wince to sulpravious and sulpring vesting greater. This great absorption would of course be sulprintous and sulprints coid is considered of sulprints the destructive influence of snow upon marble structive influence of snow upon marble strainty.

Monther Carron by Ressure.—According to Maginecaring, M. Amagat has aucoesded in solidating the arious liquids by compressing them in their grantous in the corpus and steel. He has also photographed the crystalls after orystallization by means of a ray of electric light traversing the interior of the vossel by glass comes serving as panes. The stages of orystallization can be about the their context. The stages of orystallization can be and it is seen that the process varies with the the edge of the luminon the process of the decoration of the decoration of the first country of the decoration of the luminons field and grows to the decoration of the luminons field and grows to the becomes obscure, then the dege of the luminons field and grows to the field becomes obscure, the stage stage of the luminons field and grows to the field and the liquid state is reproduced. Is steam the Best for Power?

The conversion of water into steam absorbs such a large amount of latent heat that many gersons have endeavored to obtain some subsituate which produces a vapor by absorption of less beat. Such attempts to obtain economy of and are not likely to be successful, not on somants of mechanical defect, but because of the inherent physical properties of the vapor produced.

duced from a colored properties of the vapor produced.

The mechanical value of the expansive force of different vapors depends upon the bulks produced from quala bulks of different liquids, and duced from quala bulks of different liquids, and asteomated from the conversion into other liquid, the amount of vapor produced, but the first bulk for bulk, is greater than it is with other bulk for bulk, is greater than it is with other produced, other liquid, the should be norme gain were it oct that for the equal volumes of these vapors; over nearly equal.

There would, therefore, he no economy in using its elements and there are recomenced to the control of the

Nevada.

PROSPECTIVE MINING.—Graestle, Oct, 1: The Mining and Milling Company which filed Solvetock Mining and Milling Company which filed satisfies of incorporation in the office to the Secretary of State at Sacramento, under date of September 13, of State at Sacramento, under date of September 13, of the September 14, of the state of the satisfies of the September Mining September 15 and the Shorlock Mining Dispate the Dilks mine and the Shorlock Mining Dispate the Dilks mine and the Shorlock Mining Dispate the Mining Sprosperity.

METIDOSS.

MOUNTAIN LEDGE.—W. W. Casselly, superin-tendent of the Mountain ledge, owned by G. H. O. Sunderhaus, Sierta City, reports good progress at the mine. A good trail is being constructed, and at boarding-house, will soon be built. Twenty-three men are employed. A tunnel will soon be started for the ledge. This property is one of the most valuable in old Sierra.

Definity is well watered.

PLUMBAGO QUARTZ.—Mountain Messenger, Oct.

1: Parties site at work prospecting the old Plumbago quarts ledge at Minnesota, from which very tempts to prospect it have been made during the past so years, but have been abandoned without actempts to prospect it have been abandoned without actempts to prospect it have been abandoned without actempts to prospect it have been abandoned without actempts in the property of the prospect of the prospect of the property of the prospect of t

per ton; the first lot returned them too.53 ounces silver ton. The core its shipped to the Reno Reduction Works. The silver its in masses of bright crystals mixed with gray quarts. At first sight these crystal line masses might be taken for ordinary gelena, but no return for lead has yet been made from the ore. So far as opened this ore body gives indications of being extensive and provings a very valuable proper, by. Mr. Greenly operated at Cerro Gordo in its fast as writing and he says this is the best crome be even that is the core of the fast seem of this ore yielded over that is not yield; same parties have found a vein of gold-bearing or that is seen to be some parties have found a vein of gold-bearing or that is seen to be some parties have found a vein of gold-bearing or the some parties have found a vein of gold-bearing or the or oper for. The vein is well was a seen done upon it. Deep Spring promises to be gold on the C. & C. it allroad. The ceast from Alvord on the C. & C. allroad. The country is well wastered and there is plenty of timber of the country is well wastered and there is plenty of timber.

GOOD ROCK.—Caleverse Chromicle, Oct. 1: We were shown some overy the specimens of rock taken were shown some very the specimens of rock taken (Toon the California mine, owned by S. C. Putnam & Co., the other day. The mine is and a half above the the Nokelumne river, a mile sand a half above the cuesting of the Kalivorad Flat section of country. Like many other mines in that section of country, this way worked to a certain extent by Mexicans in this was worked to a certain extent by Mexicans in this was worked to a certain extent by Mexicans in this was worked to a certain extent by Mexicans in this was worked to a certain extent by Mexicans in coulds and solomon tried to work the lead, but could prospeots. A shaft was sunk 35 feet, showing rich not make it pay, Some three months ago, Messre, A shaft was sunk 35 feet, showing rich to tap the vein at this point.

STARTED UP.—All the necessary machinery for bother works the work shaft was the worke works thought in & Co., near the fluench-house, and everything being in readiness, the worke were all the extra the fluench-house, and everything being in readiness, the worke were into the part Tuesday, and are now running steadily everything being in readiness; the worke were into the part Tuesday, and are now running steadily deverything being in readiness; the worke were into the part Tuesday, and are now running steadily the weath and the steady.

EMERRALDA.—Prospect, Oct, r. A large boiller in the book of the point of the part Tuesday, and ste now running steadily the worke were the thouse were the thouse were the thouse were the thought were the thouse were the difference of the part Tuesday, and ste now running steadily the part Tuesday, and ste now running steadily the part Tuesday, and steady of the part of the part Tuesday. Bette better the part of the part Tuesday, and steady of the part of th

ESMERALDA.—Prospect, Oct. 1: A large boiler was taken to the Exmeralda mine last Wednesday. It is to take the place of the old boiler now used at the ten-stamp mill. The mine is looking better than the ten-stamp mill. The mine is looking better than ever and the proprietors are feeling in good spirits over a rich surke of late.

CLIFF MINE.—Independent, Sept. 27; Greenly Spring, in the Inyo range. They are saking out most springer in Deep and springer in the last shipment was of two IDYO.

perous winter at North Bloomfield is said to be cellent. The Derbec and Mabel mines, both worl by the drift process, are being run to their full capacity. All things considered, it is safe to intat there is a prosperous future for Morth Blooms. The contraction of the contraction

GOLD VALLEY.—Sierra Tvribune, Sept. 29: At the Gold Valley mine about six tons of ore are being reduced daily with good results. The mine is improving constantly and competent judges are of the opinion that it is destined to be one of the big properties of this section.

The opinion that it is destined to be one of the big properties of this section.

FOREST KING,—The management of the Forest King mine changed hands a short time ago, The mill has not yet started up.

### Siskiyou.

COLORS FROM THE MINES.—Yreks Union, Sept. 29; Ex-Lieutenant Governor Daggett of Black Bear bas just returned from a trip to Knownothing creek and writes us that he can truthfully say that the quartz outlook in that he can truthfully say that the quartz outlook in that the can truthfully say that the quartz outlook in that district is good. The success of these mines is another irresistible argument mountain from Eina. Geo, Smith of Eina has mountain from Eina. Geo, Smith of Eina has mountain from Eina. Geo, Smith of Eina has amountain from Eina. Geo, Smith of Eina has arructing a large dright to he mise on Mochádam curedy been foreing a large dright to he mise will probe entering the farm of the mine in the entering pumping and hoisting machinery, which have shaulting a large dright to has have all the time work was suspended in this mine it was larged to men, that the time work was suspended in this mine it was the first the time work was suspended in this mine it was min of such of the man. Harry Doney and Ed Carlack in the work was suspended in this to McCloud note; where they suspended in this work was full care way, will return as soon as they can get away.

Will return as soon as they can get away.

Trinity.

HULLYCHOOP.—Trinity Yournal, Oct. 1: The Bullychoop mining district is gradually coming to find from the front. The Cumberland Mining Company own or have an interest in most of the mines in the district, and they are making preparations to push trick, and they are making preparations to push a crack and a shoot by which to rapidly convey the areack and a shoot by which to rapidly convey the core from the Eureke mine to the mill. None of the ore from the Eureke mine to the mill. None of the present from the Eureke mine to the mill. Mone of the present as a prosperious an owners will keep up the present methods of operations and the continues to pay as usual and the owners will keep up the present methods of operations as long as the mine has as prosperious an outform as long as the mine has as prosperious an outform as one as in the mine has a prosperious an outform as one as in the shall when the first mail and freight, and all parties arriving passentions and the present methods of portions are boptiably eared for at the botel of Smith & Johnston.

Dead as the mining and the present method of Smith & Johnston.

DEADWOOD DOINGS.—Mt. Henry Martin of the Brown Best mine was in town Thursday and informs us that Deadwood interests are progressing favorably. Last week Mr. Wm. Blegrave found a brown Best Company. The Last Chance turned bas been driven in to a distance of about 500 feet when the fouring of the air necessitated the raising force of men is working at each end of the sharing expect to have it completed in about six weeks. The mild at the Brown Best is tunning steadily on one which averages about the same as usual, and the one which averages about the same as usual, and the company is continually prospecting and developing tip property.

Persons receiving this paper marked are requested to examine its contents, terms o subquested to examine its contents, terms of such give it their own patronage, and seription, and give it their own patronal times in the more widely known to others, and extending its influence in the cause it taithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

#### Don't Fail to Write,

THE relative cost of lifting water from mines by steam and Cornish plunger pumps, is to be beeted at the Little Mismi share at Lesdville, where several large steam pumps have lately been placed at quite a depth. The test will be made by competent parties, and will consist of the water evaporated in the boliers in litting a certain number of gallons a collers in litting a certain number of gallons a positive.

Its most parts of the United States, and in Colorado sepecially, the miner who is so fortunate as as to develop a good ore-body has a property which will at once bring him handsome error united. He can sell his ore on the dump, or employ teameters to hearl it to a railway and sinp it to public samplers, or direct to smelters of the control of the co

A. Wilsow of Mimshew has sold the Oro Fino mine, adjoining the Cole claim on Big. Butte (Butte 0.0.), to an Eastern company be. In Edura, he should be supply be. Gravel Minng Company, and reported to be a rich company with plenty of capital to back it. It is now paying \$200,000 a month in dividends,

This invention relates to the class of refrigera-tors for the preservation of perishable material, and consists in a peculiar construction and com-bination of devices.

#### "Black Sand" as an Industry.

EDITORS PERSS:—Since the appearance of my article, published in the Mining And Solky.

THEO PERSS some weeks ago, on the subject of dold in the black sand what might be produced from it, I have received from a number of parties letters, showing the amounts that they could be gathered from their respective properties. So flattering have been the respective properties on sands I have investigated, that I article state on sands I have investigated, that I article lettering have been the respective properties. So flattering have been the respective properties on sands I have investigated, that I can table industry. There seem to be two observing and especially in the winter months, a prolection for the sands, after they are gathered. To we to collection and extraction of gold can be made consumply matter, and both the collection and extraction of gold can be made configurable.

To me, this is a simple matter, and both the collection and extraction of gold can be made comparably in the last in the way in the waying drift or hydraulic for operating and paying drift or hydraulic washings.

Yallo will run less than the drift or hydraulic washings.

Some may say, If they are so good, why don't washings.

Some may say, If they are so good, why don't and some may say, If they are so good, why don't are some and and so we have don't are so good, why don't are some may say. If they are so good, why don't are the sour so good, why don't are so good, why don't a

washings.
Some may say. If they are so good, why don't I take hold of it? I will snewer this by sayings.
I have my hands the list sheady, and cannot spare the time, besides, I do not own in any hydranlic or drift mine or river claim. There is one the time, besides, I do not own in any hydranlic or drift mine or river claim. There is one thing I can do—instruct him, and he can I will select a party, instruct him, and he can but keep energy instruct him, and he can but keep not be so and select any late the necessary works in shape. The fact is here are millions of dollars locked up in the hole of this State, to say nothing shout late an emillions of dollars locked up in the an industry that will give employment to khous an industry that will give employment to khous and action the per ton in gold I have extracted from them. Altarial B. Paul., tracked from them.

### Mining Share Market.

While the stock market here continues dull and uninteresting, affairs in the Comstock are full of interest. Both the California battery and pan-mills were shut down a few days since,

and pan-mills were shut down a few days since, and pan-mills were shut down a few days since, to arrange for the water-power. As soon as the connections are made, in a few days, the entire complement of 80 stamps in the mill will be all will will be activated a complement of 80 stamps in the mill will be weekly bullion output from the mine will the weekly bullion output from the mine of \$108,000, makes the fenth consecutive mouthly dividend declared aince of \$108,000, makes the tenth or nearly \$100,000. The last force monthly dividend declared aince of \$108,000, makes the tenth or nearly \$100,000. The share the fenth of the share of the state of the state of the share of the share of the share of the share of the payment for the next two years, and, if the area of ore is alleyed of a suspension of the payment for the next two years, and, if the area of one of regular monthly dividends by the company of regular monthly dividends by the company of regular monthly dividends by the company of regular monthly dividends by the strength of the next the same of the old. The recent recent of the strength of a strength of the new strength of a strength of the new strength of a strength of the old. The recent strength of the strength

STAMP MILL DOORFE "ECONOMIC"

We have here the Stamp Mill in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 lbs, each) of our stamps, and the rapidity (300 strokes each per minute) with which they rep. There are 4 shoes in each stamp, so any other are 4 shoes of the shee since on the dies per minute. Less power is required than in that there are 4800 strokes of the shoes on the dies per minute. Less power is required than in The Morter has screens at both ends, giving ample discharge. There are no came or tappets to wear or the adjusted. The stamps adjust themselves as the shoes west.

FEEDER AN AUTOMATIC ORE

## Goes with each Mill, We also have a suitable

#### Breaker. ROCK

Several Mills are now in the mines doing excellent work. The 'Economic" is not only a mill for small mines, but we believe it is destined to superezer the old stamp in mills of the laterest caracter.

OR VANNING MACHINE, THE FRUE ORE CONCENTRATOR

## (00'0995) FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the colebrated "Triumer" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their frames being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built as compactly as their requisite strength will permit, weigh less, regaines as for motion when operated. They are built as compactly as their requisite strength will permit, weigh less, the quire less freight space in boxes, by which their their teams and county less mill room when set up.

An important improvement has recently been introduced into their construction, which consists of a kirwitz Park. Plark, placed in front of and which takes the discharge from the feed and amplies to an introduced into the shaking frame to which the table is attacted to this table by the longitudinal motion of the shaking frame to which the table is attacted when the imparted to this table by the longitudinal motion of the shaking frame to which the table is attacted we have at hand many testimonials, from well-known Superintenders of mines in different mining districts of the United States, bearing evidence of the efficiency and superiority of this form of Concentrator, and we shall be pleased to send Circulars covering such letters of testimony, as well, directions for setting up and operating these and are ready to quote special prices are are as a such superiority of the stable by the case of motion and appearable order.

### Chlorination of Gold-Bearing Sal-

puides.

The following paper was recently read before

The following paper was recently read before the American Institute of Mining Engineers by Gybon Spilsbury of New York City;

In a paper read at the last meeting of the Institute on Scribton, Pa., I referred to the proposed introduction at the Haife gold mine, proposed introduction at the Haife gold mine, sont I have since them feet experimenting from I have since them feet experimentally from I have since them feet experimentally with this method and operating it on a regular scale, and I think it may be of interest to scale, and I think in a scale, and I think it will be seen experimentally and the content of the content of the feet experimentally have in the search of perfection by our fellow-member, Mr. Adolph process, as is well known, consists in particulars, the charge of ore to be chlorinerated by the ordinary metallurgically, is very objectionable in some particulars, especially the diffinculars, especially the consists in the stuffing-boxes and the consent escape of chlorine, while fairly of keeping tight joints in the stuffing-boxes and the consecuted and requires now adopted is extramely estable and requires now adopted is extramely estable.

The cost of repairs has also proved excessive, simple and requires now adopted is extramely estable.

The system is a sufficient on the stufficient of the consecuted in the requires of a plain from the stuffice of the st

simple and requires no tight dishes the blacked.

The Chlorhestor.

The Chlorhestor.

Consists of a plain iron barrel lined with lead, and provided with a manhole on one side for party give ore. The ore is and provided with a manhole on one side for charging and disobarging the ore. The ore is partially filled with water; then a sufficient of partially dilled with water; then a sufficient of partially dilled with water; then a sufficient of the ore is poured the region is charged. On authority of chloride of lime is dropped in, on the partial search is extrement to recover is put in place and thoroughly secured, and the barrel is etarted and chloride of lime from coming in contract is to prevent the sulphuric acid the contract is to prevent the sulphuric acid which the other charge is completed the closed. When the charge is completed the contract is the prevent as been devised which there is the contract of the contract is contract of the cont

When this operation is completed, enough water is introduced to nearly fill the barrel, which is again revolved, so as to thoronghly wash the ore and

Dissolve the Ohloride of Gold.

The barrel is then opened and the liquor is decaded off upon large shallow filter-beds. Another water is then put into the barrel, other water is then put into the barrel, which is again revolved for a few minutes and then decanted upon the filter. Ultimately the way, and a final wash-water is given on the filter. The results so far obtained have been fitter. The results so far obtained have been result of the last sight charges run. Each charge contained a little over one ton of ore of through a 100-mesh and 60 per cent through a formed a little over one ton of ore of shory in the seasy and a seasy and of the ore through a 100-mesh and 60 per cent through a 150-mesh and 60 per cent of it would go a little over one ton of ore of through a fore one showed 36.70 gold per ton. get a rush of people to the place, and it often cocurs that persons come in from the mines with a fabulous account of riob strikes and of the biggest thing on ice that they have struck, and all that is needed is a small capital which by the millions.

The sgricultural and timber lands must also be puffed away up above all comparison. While we are willing and anxious to boom anything and anxious to boom anything we are willing that has just merit, at the same that the strict of the truth, at least that we are on the side of the truth, at least that we are on the side of the truth, at least that we are on the side of the truth, at least that is the sim of the Recovd. It is a well-that we can be side of the truth, at least that is the sim of the Recovd. It is a well-that is the sim of the second. It is a well-that is the sim of the second. It is a well-that is the sim of the second. We have also many good-paying gold mines and there is a large part of the scounty that has note of them are built in this section, it will sail before seeing the part of the county that has not for the seen prospected at all, and still many places we are told by impayen not been prospected at all, and still many other localities where gold has been found that have not been prospected at all, and still many places we are told by impayer not been prospected at all, and still and that the receiper this is the fact of the constitutions. In many places we are told by impayen and the sections this is the fact of the constitution of the recover are told by impayer in the section which will such be to the record which will such be seen of a some of our mines that be washing. One sengers long truther all many making an examinar. One some of our mines that have already been opened.

H. F. LANDON has been appointed Assistant Secretary of the San Francisco Board, vice Banaman removed.

QUARTA DISCOVERIES AT UNGA ISLAND,—Last spring a prominent firm of this city dispatched Acrobi Affactedhian, an experienced miner and discoverer of the famous Treadwall property, to prosecute a search for supposed locations north for Island. The firm has received advices that Molkethian has made some surprising discoveries of quartz leads which are setonishingly coveries of quartz leads which are setonishingly rich and unlimited in extent.

An IMFORTANT FIND.—Two skeletons dug up several months ago in a cave near the Orneau, in seletim the foliam, any distinct record exists. These prehistoric nidividuals were contemporary with the mamneth, and inhabited the country before the great toe ago. They were short and thick-set, with bread shoulders, supporting a long and with bread shoulders, supporting a long and manner of the country head.

FORESTRY REPORTS,—The State Board of Forestry has received from the State Doporter meant at Washington a most valuable book on forestry in Europe. It is made up of the representation to the forestry of the nations to which they are accretized. These reports were ordered by the accretized, thou State Brate had of Forestry of State Brate ordered by the Chistiman of the State Brate ordered by the terested in forestry can obtain this book by applying to the secretary, Mr. Sands W. Forenam and the secretary, Mr. Sands W. Forenam and the secretary of the secretary of the secretary of the secretary of the secretary. Mr. Sands W. Forenam and the secretary sand of the secretary of the secretary.

THE History of Nordon News is any regularin the same form and manner as the
tion, in the same form and manner as the
original London edition—both editions issued
simultaneously. The enterprise of the publishers in presenting this reprint for its American
casters, at the low and popular price of 10
contrs, will certainly interest a large number of
our readers. We have several numbers before
our readers. We have several numbers before
our readers. We have several numbers before
us. The edition for Angust 27th contains 18
illustrated pages—making in all a 32-page
journal, elegantly printed upon very superior
paper. It may be had of news agents general.

Jy, New York office in Potter building.

A NEVADA MINE SOLD.—D. H. Jackson has sold four-rights of the Bunker Hill gold mine. Battle Mountain district, to a Chicago and Denver syndicate, of a Chicago and manager, for \$75,000.

#### The Alien Land Law.

tal in developing our mineral resources on a large scale in the Territories. It may be un-fortunate that this is so, but it is none the less that we are largely dependent on foreign capipractically withdrawn from the mining field. In previous articles in the Press we have shown while the Act stands as it does now. They have hand, Attorney-General Garland has given an opinion that it does not. Still aliens will not now buy mining property in the Territories that it does apply to mines. On the other knowledges that he knew nothing of mines and had no intention of including them. But Senators Stewart and Jones and others all agree noticed. The member who drew the bill acas well as agricultural and grazing land. when the sods must be removed and dried. Its then ready for use sgain. Engines of this kind have been used in Europe, but these are the first in this country. \*\* SODA " EVGINE,—It is against the law for steeks in steeks engines to be run on the streets in Minnespolis. To do switching work there, two Minnespolis, To do switching manulachtering. The boiler will contain the tons gives an intense when dampened by steam, gives an intense when the sods must be removed and dried. It when the sods must be removed and dried. It

WROUGHT-IRON PIPES OF THE PAST.—A process for the manufacture of wrought-iron pipes was patented by Whitehouse in 1825, and pipes manufactured under this invention were gamies. Prior to this invention, for many years, old gun barrels were used for services, and when these became searce wronght-iron pipes were made by James.

A COMBINATION MAIL AND SCREW.—An East-ern inventor has devised a new sorew—half nail, half sorew—which is said to beat anything versart. Two blows of the hammer and two turns of the sorewdriver and it is in. Its hold-ing power in white pine is said to be 332 pounds against 298 pounds, the holding power of the present screw.

STEEL RAILS:—An interesting test of steel rails was made at the Troy Steel and Iron Comrails works, Troy, N. Y., on July 28th. A rail was struck free times in the center, which was unsupported, with a five-ton hammer, and could not be broken. FINE DEILLING.—Edward Peck of Woodstook, Ga., recently mended the winding that the of a watch by drilling a hole so small that the point of a needle served as a rivet. So small was the amount of point used that its absence could not be detected by one sewing with the needle afterward.

This late invention in iron and steel works practice promises to be of considerable service in processive and a steel works in preceding exconomy in the mills. It has been patented obeh at home and about a new furnaces in place of the mine or sand bottom invention consists in the substitution of a new basic slag bottom for mill and other repeating inpace of the mine or sand bottom nent advantages claimed for the invention are menerous and have been set forth as follows:

I. A decrease in furnace waste of \$2\$ per cent and content and revenient and reve forms an axellent fettling for the production of a menerous and have been set forth as follows:

I. A decrease in furnace waste of \$2\$ per cent face intent which is production of a face from the forms as axellent fettling for the puddling, in place of the ordinary flue cinter the puddling, in place of the ordinary flue cinter the puddling, in place of the ordinary flue cinter the puddling, in place of the ordinary flue cinter from the fortion.

A leaves of bars, plates, helets and other security or repairing and fettling the bottom, owing to the small amount of alag required.

The bottom is made as follows: The old sand mine bottom is cut out to a depth of the soul and mine bottom is cut out to a depth of about two inches is put in its place to a spread and mine bottom is cut out to a depth of a short two inches is put in its place, being the one fire an inches; and the basic slag in outes of about two inches is put in its place, the cinter of the surface, when the bottom is ready for charging. Thus made, the bottom is ready for charging. Thus made, woo out, to three owt, of slag per week is quite two owt, to three owt, of slag per week is quite woo out, beep it in axellant to continue the continue of the interesting. From and the continue of the interesting of the surface is quite to the own of the continue of the continu

A Saving of M Per Cent

A Saving of M per Cent

Is claimed for the invention—equal to \$35 to \$50, according to its quality, upon every 100 tons of iron melted.

This saving, according to the English correspondence of the American Manujuckurer, is due to the inet nature of the sale one formed really precedence, so that the scale from the bottoms of piles, tests the iron or steel from turbher waste. The bottom being quite free from silics, the cinder tormed consists of unalted seally which is an except the iron or steel from turbher waste. The bottom being quite free from silics, the cinder come consists of unalted seals, which is an exception to the tests of the saving is compared only many consistence of the saving is a seal of the consistence of the saving is compared to the saving in the saving is seal of the saving in the saving is sear and the saving is the saving in the saving in the saving is the saving of the patentian who have carefully compared the new basic bottom with the sand bottom.

The Actual Working of the Mey Invention.

The Actual Working of the New Invention.

The Actual Working of the Mew Invention. In the case of steel works which possess no puddling furnaces, the cinder produced from the mew bottom can be readily sold at \$5.75 per ton instead of \$1.37\$, which is the amount obtained for the ordinary fix from sand bottoms. At first the patentees had a little difficulty with sheet furnaces, as, owing to the large amount of damping down, the cinder would not run of damping down, the cinder would not run of damping. But he patent is working most successfully at Mesers. Brooks, Smethwick, and Mesers. Philip Fancett & Co., near Birming. Darn, both of which firms make a specialty of sheets. These bottoms have also been recently put in by several other firms and are fast coming in the patent of the patent and are fast compared to the patent of the patent in the patent of the pat

#### American Steam Engines.

SLEEP A PERVENTIVE OF HEADACHE.—A solution of the nature of the case, "Sleep, if select at the right moment, will prevent an attack of nervine writer asys." Sleep, if select of nervine solutions of its coming, they can notice that it begins with a feeling of weariness or heaviness. This is the time a select of an hour, or even two, as nature guides, will offectually prevent the headache. If not taken just then it will be too late, for, after the attack is far into the might, perhaps. It is there is a strate the people way, it is imposable to the the select of the intervent in these days for doctors to 'forbid having their patients waked to take medicine if they are select when the hour comes round, that the people have learned the lesson pretty well, and the people have learned the lesson pretty the rich the sick than medicine. But it is not so well, and the lesson pretty the they make the lease is better the sick than medicine. But it is not so well known that sleep is a seven in the select in the select well. It is not so ive of disease—better than tonic regulators and ive of disease—better than tonic regulators and the lates."

DANGEROUS DRINKS,—The Philadelphia News is suthority for the following: "A bartender plaintively bewailed the necessity of having to rub congesled drops of sticky beer off the bart. They not the wood, do they? Herefore of one seeking compassion, 'they? Herefore's 'They not the wood, do they? Herely repeated a beer-bibbler. 'They what in the name of common sense does doe to my stomach?' Replied the manipulator of drinks: 'It is beyond me to tell. Let me show you stomaton acres do to my shore of raw mest on enembing.' He placed a piece of raw mest on something. He placed a piece of raw mest on something. He placed a piece of raw mest on meant had dropped upon it a small measure of an imported ginger-ale. In five minutes the meant had parted into little pieces, as though backed by a dull knife."

FOR PALTING FOR TLOORS.—Some months ago the floors of many Austrian garrisons were painted with tar, and the results have proved so uniformly advantageous that the method is becoming greatly extended in its application. The collection of dust in croacks is thus preventing of the eye has been noted. Cleantiess of the form has been noted. Cleantiness of the form has been cotilitated and a consequent diminution in irritation of the form of the some familiar of the form and the constitution of the eye has been clearly added. The coording of tar is inexpensive, requires renewal but once a year, and presents but one disadvantage, namely, its somber color.

PREUMONIA EXPLAINED.— It is generally supposed that preumons is due to the acotapposed that preumons is due to the acotage dental penetration of specific miorobes into the Yakem, Dacoud, a Parent be observations of M. Jacoud, the disease really results from the development disease really results from the development permanently present in the system. A chief primanently present in the system. A chief preum of such development is a sudden condition of such development is a sudden collil, which explains the frequent coincidence of lung affections with about to change of temperature.

EFFECTS OF IMAGINATION.—A young man in Philadelphia was hurt at the locomotive-works and two physicians said his leg was broken. After he had been in bed a week another doctor was called who said the limb was not fractor was called who said the limb was not fractored, and the young man at once got up and tured, and they difficulty.

OUARTZ.—Jacksonville Times, Oct, 7: J. M. Casteel will prospect the McDonough ledge near Casteel will prospect the McDonough ledge near pended at the Round Mr. Shafer, a miner lately near the County. B. F. Taber is now enter lately from Colorado, are prospecting in the southern portion of Josephine county. B. F. Taber is now enter a two or three mines of his own, which he thinkes it wo or three mines of his own, which he thinkes it wo or three mines of his own, which he thinkes have a search at the Stanley mines in Evans creek district, which prospects the he times and prospecting it thoroughly. He has not one of prospecting it thoroughly. He has not one of the dump and expects to have a mill at prospecting it thoroughly. He has no tone of quartz on the dump and expects to have a mill at before long. Many placer claims have on it before long. Many placer claims have been taken up in Sucker creek district, Josephine county, by parties from Grant's pass and elsewhere. Excellent prospects have been obstained and a lively mining camp is in view. J. N. Casteel and B. C. Escellent prospects have been obstained and a lively mining camp is in view. J. N. Casteel and B. C. Escellent prospects have been obstained and a lively report that operations are still progressing tworthy in the Hope ledge. The mill is running day and right and crushing ten tons of a larr quality of ore every st hours.

### Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s Soientring Press U. S. and Foreign Patent Agency, the following sreporting a provided through Angeles. Wo. 371,140. Dated Oct. 4, 1887. This is one of that cleas of washing machines that of a confidence in which a cylinder containing the coldessis no communication being freely effected between the two firms and comists in the peoplies in constituted the checked to communication being freely effected between communication of devices. The confidence is to provide a machine readily operated, in which the clothes will be subjected to object is to provide a machine readily operated, in which the clothes will be subjected to object is to provide a machine readily operated. In which the clothes will be subjected to object is to provide a machine readily operated. In which the clothes will be subjected to object is to provide a machine readily operated. In which the clothes will be subjected to object is to provide a machine readily operated. In which the complete our outside into a steam throughout their mass, while they are prevented from pack-their mass, while they are prevented from pack-they was a complete and the mass of the pack-their mass.

MILE-BOILER.-Carl D. Salfield, San Fran-

Mike-Boilker.—Carl D. Saffield, San Francisco. No. 370,974. Dated Oct. 4, 1887. This device for boiling milk is designed to prevent the boiling over of the liquid. It consists of a supplemental chamber secured to one side of a supplemental chamber secured to one side of the vessel, which has an opening made near the supplemental chamber. Then flanged cover being also reduced so as to leave free access to the supplemental chamber. When milk is boiled in the vessel it becomes thicker on accessent of the cream rising to the top, and often count of the cream rising to the top, and often addedny rises so as to boil over; but with this mental chamber through the opening in the upper edge of the vessel, and the supplies mental chamber through the opening in the upper edge of the vessel, and the surplus will thus ber deduced and prevented from boiling over upon the stove.

The store of the store of the store of the store.

PACKING PLATES FOR HAISINS.—Truman C. White, Fresno. No. 371,013. Dated Oct. 4, 1857. This device for packing raisine consists of a plate having depressions made in its surties, which plate forms the bottom of the president in a certain position, so that when the raisine in a certain position, so that when the case for shipment those will have when the periminary box will form the top town of the preliminary box will form the top made of any suitable or desirable made of any suitable or desirable made of any suitable or desirable made in any form or the depressions may be made in any form or the depressions may be made in any form or the depressions may be made in any form or ing the same design.

ing the same design.

Hybrathic Euchrie.—Samuel M. Knight, hybrathic Euchrie.—Samuel M. Knight, and Euther Creek. Mo. 371,076. Dated Oct. 4, 1887. This improvement in hydraulic engines consists of a water-cylinder with a plunger moving therein, a pieton-rod consected with the plunger and extending through one end and noving therein, and extending through one end and head, balance-valves by which water is admitted and extended atternately from the opposite and a mechanism by which the valves are schuzted and balanced, and which the valves are schuzted and balanced aupplemental safety exhaust walves, and a supplemental safety exhaust walves, and a supplemental safety exhaust walves, and a supplemental safety ornare when the opicies to one and of the cylinder, and a mechanism by approaches to one and of the cylinder, and a supplemental safety ornare when the pieton approaches to one and of the cylinder, and a supplemental part of the cylinder, and a napproaches to one and of the cylinder, and a status on the state of an attached by a piece with a corragated front, so it can be used one round rods or pipes in the same menner that the one of the cylinder, and the supplemental plate or jaw is smooth on the piece with a corragated front, so it can be used on round rods or pipes in the same menner that the emphasion of the wrench is ordinarily used on angular under jaw of the wrench is ordinarily used on angular under jaw of the wrench is ordinarily used on a postery the inner tace of the one or provided with holding-teeth, orther jaw of the wrench with holding-teeth.

The pressure is such and with holding-teeth.

The pressure is such and with holding-teeth.

The pressure is such and with holding-teeth.

PACIFIC ROLLING MILL CO.,

Manufacturers of Mining and Sawmill Machinery, Engines, Boilers, Etc.

Several Mills are now in the mines doing excellent work. The "Economic" is not only a mill for email mines, but we believe it is destined to SUPERSEDE THE OLD STAMP IN MILLS OF THE LARGEST OAPAGITY.

Goes with each Mill. We also have a suitable

АИ AUTOMATIC ORE FEEDER

We have here the Stamp Mill in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the rate more than compensated for by the great weight (1200 fbs. each) or minute), which which they run. There are 4800 strokes on the shoes on the dies per minute. Less power is required than in that there are 4800 strokes of the smount of work.

The Mortar has screems at both ends, giving ample discharge. There are no cams or tapped to wear or he adjusted. The stamps adjust themselves as the coes wear.

(To be Continued)

OPTERIORT DECISION.—Judge Levy has rended a decision of interest to all advisors the playwriters whose works may be infringed upon. A suit was brought by William and Lizbe Vectorus zgainet as a copybric or a play on the copybric or a play on which they hold a copybric or a play on which they hold a copybride an ingubation was asked for, he having but yet a play on which they have a complaint, budge Levy states that Section III of the Revious in substaining a demurer to the complaint, vised Statutes of the United States exclusive the Rector of the Complaint, bion in all suffer at law and in equity under the patent and copyright laws of the United States or sull ander the patent and copyright laws of the United States.

It is said that irrespective of the copyright the patent and copyright the patent and copyright the patent and copyright the patent and one was relating the production upon which a stranger cannot treepast. Sufficient for an infraction of copyright and not for an infraction of hainfiff sues on the form an infraction of hainfiff area on the form an infraction of hainfiff and not for an infraction of a copyright and not for an infraction of a sufficient of her and suction was dismissed.

The action was dismissed, a many places about the copy of the patent and not be a copy or an analyse of the patent and not are also and the common-law rights.

SETLING GROUND.—In many places about town, says the Virginia Report, the surface has sunk two or three feet, and often as much as tan feet. In front of the Fourth Ward school the feet in the ground has sunk two and three feet in the ground has sunk about the old bullion well, on Bowers' grade, has sunk about the feet, and near the Sharon shaft, on A street, they have on the surface to make it level. This is caused by the caved workings it level. This is caused by the caved workings of years past, and the ground above these drifts has been settling and finally causing these cavities on the surface.

Heavy Travel.—The traffic on the line between Santa Barbara and Los Angeles has increased lately to so great an extent that the
company is now figuring on doubling the service. Should this be done there will be two
trains per day between Los Angeles and Santa
farbara interead of only one as as ty peacent. The
local braffic on the Southern Pacific line south
of Los Angeles has grown tremendously lately,
and the evening train is now accompanied as
far as Mojeve by a chair car, which returns
far as Mojeve by a chair car, which returns
with the morning train. It is invariably full of
passengers.

WHILE boring for artesian water at Raton, N. M., a flow of natural gas has been struck. It ignited freely and is sufficient in volume to inspire a local company to undertake its development more fully. Eaton is near the great cont measures of New Mexico, which extend southwest across Santa Fe county. ELECTRIC LIGHT IN MINES—Sixteen are electric lights have been placed in the Carbon hill cost mines, southeast of Tacoma. These mines belong to the California Improvement Co. of the Central Pacific system. The parties putting in the lights go to Alsaks in a few days to light up the Treadwell mines in the days to light up the Treadwell mines in the sense small server.

The Hoffman Furnace,

Which is a Bruckner cylinder with a fire-box at both ends, has had no application in Utah. Unless the furnace be longer than would be preciseable for other reasons, there is no apperent advantage from the fire at both ends. Escapt advantage from the fire at both ends. Escapt advantage from the fire at both ends.

Unting the closing months of Mr. Bruckner's life, he studied and patented different combinations of two cylinders for the perfect utilization of heat. He proposed also a slagging hearth, which would remove one great objection to the cylinder principle, by matting the charge, but he action to principle, by matting the charge, but he as careful study of such combinations, fired from one fire-box, I would reject them as too costly; frouble in one fureace would of necessity stop both, which would mean too much field plant,

Regarding Lead and Silver Losses,

It what I have to say about the past and present status of custing Rid of Sulphur. Present status of custing tubburets in Utsh affords any useful hints toward the more economic solution of the problem, the purpose of momic solution of the problem, the purpose of multipled.

In 1876 Mr. A. W. Geist put up and used a set Sandy. It had a five-box mounted upon the standing of matted material and short senal treek, to duide control of alra-admission. This prepared apove its level, for utilizing waster bear and allowed able five-box and the status of matted into a restrict the pertail prepared charge was raked into an inclined ohuse which conveyed it into the cylinder benefit was raked into an inclined ohuse which conveyed it into the cylinder benefit with the status of the cylinder benefit with the first of the moveral status of the cylinder benefit with the first of the cylinder the works were abandoned, and was find it did after the works were abandoned, and was find the more all the status of the cylinder property of the cylinder property of the cylinder property of the status of the cylinder property of the status of the status of the cylinder property of the cylinder the works were abandoned, and was finally purchased by the French Company for experiments of the cylinder property of the cylinder prop

before the American Institute of Mining Engineers.]
It cannot be said that the development of processes for reacting in Utsh has been evolutionary. Some of the essistence were controlled to the controlled of the controlled of the controlled of the exclusion of all others, at one works. This is certainly not because we have not bed suplur, in place, to contend with, but rather because we have not bed suplur, in place, and out of place, to contend with, but rather because we have not best of contend with, but rather because place, to contend with, but rather because we have not bear of best and out of some of the marking in America, a good share of oxidized ores. to vein or lode claims.

open to location.

EXPERIMENTS WITH GOAL GAS.—Some instresting expectable discovering experiments have lately been made by Mr. Witz, in order to determine the calorifle power of coal gas. The method pursued connected in the instance of coal gas. The method pursued competed of coal gas. The method pursued competed in the water steled in the water of salorimeter, the elevation of the temperature of which could be exactly mesanted. A business of a calorimeter, the elevation of the temperature of which could be exactly mesanted. A competency of a calorimeter, the elevation of gas at .0 degree which could be exactly mesanted. A competency of the calorimeter of trials led to the degree which could be exactly mesanted from a gas mixed with aix times a calorime of air. Before passing through the steled from a gas mixed with a stelled from a gas mixed with a collection of same gas had a caloring by puritying. If the face there are gas and a caloring by puritying. If the face of one volume of gas and the explosive mixture of one volume of gas and for partial man of a stelled for one than more than when fred with I.25 volumes of air to the caloring power is less by the caloring to when gas is mixed with air. When diluted with II volumes of arity for cont. It therefore decreases with diluted in the contrary, the caloring owner is less by the caloring volumes of air, the caloring volumes of air, the caloring volumes of air, Thus the effect of the extra dilution is inversely to what might have been dilution is inversely to what the might have been dilution is inversely to what the might have been also being the might have been the week of air. Thus the effect of the extra dilution is inversely to what the might have been dilution is inversely to what might have been also been also were the might have been and the contrary of the caloring the wolumes of air. Thus the caloring the might have been a caloring the might be a c

Moving with the earth's own rate, a celestial Moving with the earth's own rate, a celestial body would traverse in 50,000,000 years the distance separating our globe from the most remote of the 70,000,000 stars visible in the most powerful telescopes, making it possible that, known may have motions, any or every star with autable proper motions, any or every star with autable proper motions, any or every star ing the period commonly assummed by geologists to have elapsed since the first dawn of life. Intensely hot stars may have added materially to the carth's heat without coming sufficiently near to greatly derange the planetary orbits.

## SCIENTIFIC PROGRESS,

The Birth of Matter.

Human thought has never been able to form, a theory of the original market, life of force, any more than to conceive a beginning of time to layer been considered to the the 70 of the 70 of the form of the origin of matter, life of force, or limit of space. Of matter, life of the 70 of lawer been accustomed to think that the 70 of the 70 of the original and in presence of a distinate gualence, Mr. Wm. Crookes, F. H. S., guild and audience, Mr. Wm. Crookes, F. H. S., and in presence of a distinate gualence, Mr. Wm. Crookes, F. H. S., in matter fording to show that these acome have a series of brilling to some themselves evolved from simpler forms of matter searths, and to present it up into its fractions of the matter searchs and to be electric ourrent, the spectro-forms of matter forms of the control of th

SOLDERING CAST IRON WITH TIN—Many OTABERING CAST IRON WITH TIN—Many outside a tricles are made of cast iron variety decorated. The smaller articles of this budge decorated. The smaller articles of this anamer. Then the question artices how to manner. Then the question articles how to man different a question which puzzles many, but which can be practically solved. True, it is difficult to find a simple method, bocause cast iron has but a slight opportunity for the soldering can be made easier by first cleantre, which is not necessary when the first turn is of recent occurrence and the broken parts fracture is of recent occurrence and the broken parts are perfectly clean on their trees. With a breast parts are perfectly clean on their trees. With a breast should be continually secrubbed until they finally appear perfectly yellow, thus in a cervanty of the continually secrebed until they will be continually secrebed until they finally appear perfectly yellow, thus in a cervanty of the continually secrebed until they will be continually secrebed until they finally appear berievely of the fractery of the secrebed the continually believed the final sense being "day of the brassa from the fine writes very quickly. The brassa from the fine will make as brass is tinned, and then with more greater difficulty the parts can be soldered to-tinned just as brass is tinned, and then with no greater.

DETERMINING THE PLASHING POINT OF MINERAL OHLS BY ELECTRICITY.—The "dashing
point" of a mineral oil is the temperature able
which the liquid begins to give off inflammable
vapors. In America, this point is determined
by a simple electricial method known under the
name of the Seybolt process. The mineral oil
is placed in a vessel, open at the top, and heated
is placed in a vessel, open at the top, and heated
the distance apart hang just over the surface
of the liquid. By means of a small induction
of the liquid. By means of a small induction
of the liquid. By means of a small induction
and the semperature of the weter-bath being
fradually increased, the reading of the thermometer is taken at the instant the vapor
and the semperature of the water-bath being
takes fire. It is, however, said that this methskes fire, is in America one of commons
as the inductive is taken at the instant the teaulth,
as the inductive is the mether as the induction
of does not yield very concordant results, and

THE HUDSON KIVER TUNNEL seems to be in a bed way—decidedly apsemedic. It is reported that work on the tunnel has again been suspended, the reason it is said being financial. Bying as been carried on only in the north tunnel, which has been worked for 1840 feet from the shaft, or one-third of the distance across the river.

come quite an extensive one. Every mill on the river wastes great quantities of sawdust. It has not been available for shipping because of its bulk. Now a hydraulic press has been invented to press the sawdust and reduce its bulk some 75 per cent, and in this shape it can bulk some 75 per cent, and in this shape it can be be beloned.

DAUGURGOTS FLIES—STRAKGE APPLICATION.—

DAUGHER CATHER, a farm band, about 26 years of age, working near Belleville, Missouni, bas had age, working near Belleville, Missouni, bas had a singular experience the past few weeks. He was attached by poisonons dies, worked on a farm in Texas, and one day he lay not the fields to take and one day like a seleop he was attached by poisonons dies, which had orewise they laid their eggs. Criting nostrile, where they laid their eggs. Criting nostrile, where they laid their type head over his face and it he head to be suffered which had been came North about 10 days ago, He had been audering for week with a tarritiness in the bead, which nearly blinded him. Besides that, he suffered to mad for the past few days with a terrible pain, tice bas described in the order of the latter from the sufference in the latter from the sufference in the latter in the correct in the latter from the sufference in the latter of heat and in 10 to break them with a quarter to half an inch in length, so hard thet it was almost impossible to break them with a heat of the manner. The month is been with a sufference in the manner. The manner was very much relieved, but it is supposed that his beat is still full of the bar the southern line of the state of near further or the them the southern line of the State of an order. A LIVING POPOUN,—In the Eastern sees, from Ceylon to Japan, there abounds a little fath, belonging to the genus Chatdoon, which see the blow-pipe used by boys for projecting pears the blow-pipe used by boys for projecting pears and putty. The nose of this fish is a sort of pelling a drop of water with force enough to bring down a fly. Its aim is very accurately bring down a fly. Its aim is very accurately bring down a fly. Its aim is very accurately bring down a fly. Its aim is very accurately bring and it reside maters on a weed or tuft of grass near the water. The fish castiously approaches, the water and it teredy misses for the castiously approaches, teaching and on a water, teaching projects its trabe from the water, the set of the castiously approaches, the water of the water of the castiously approaches, so he swallowed by its oaptor.

Takking Our Grand Stors,—There are serven.

TAKTING OUT GREASE SPOTS.—There are several and efficient and several and efficient and several and efficient and several ereal effectual means of taking out grease spots.

Chlorolorm will do it; so will saft dissolved in and ammonia. Or you can wet the place with a mononia-water, then lay white soft paper over the ammonia. The new for the several ereal several ereal its and iron with a hot iron; or trub French chalk on the wrong side; let it remain a day; spite and siron with a prosecution on the spot or the several ereal ereal

RASPING THE HOOF.—Says an experienced blacksmith: "More horses' feet are ruined by ray other cause." This outside coating is impervious to water and does not evaporate. "When broken into by rasping, the moisture of the foot evaporates, required by the hoofs dry and brittle.

H10H LICENSE.—It is said that high license has increased Chicago's revenue from that source from \$200,000,000 a year to \$2,000,000, and has decreased the number of saloons.

INDUSTRY AND SCIENCE.—An international exhibition of industry, science and art is to be held in Glasgow, Scotland, extending from May to October, 1888.

Seven Ways of Curing Warsh. Any of the following named remedies, says the following named remedies, says the following named remedies, says the fosten the order warts and permenant of the formally our warts and remove them: 1. Moisten the warts and rube always and rub sel-ammonie well on them right and rube is a forthight a spolicition will involve gall two or three times a day. 3. Exp. look's gall two or three times a day. 3. Exp. look's gall two or three times a day. 3. Exp. look's gall two or three times a day. 3. Exp. and apply it to the warts. 4. Pare the warts and apply is to the warts. 4. Pare the warts and apply is to the warts. 4. Pare the warts and apply is to the warts which will soon be oured. 5. Touch the wart which will soon be oured. 5. Touch the wart with vincedaily, occasionally garing the wart with vincedaily, occasionminutes, and repeat several times during the minutes, and repeat several times during the minutes, and repeat several times during the wart with a context with a diluted one. Will they are green with bean leaves and they out they are green with bean leaves and they will disappear after a few applications. 7. Rub will disappear after a few applications. PLASTER BUSTS may be cleaned by dipping them into thick, liquid cold starch—that is, clear starch mixed with cold water—brushing them when dry.

GOOD MEALTH,

THE STABLE CUEE.—A correspondent of the Boston Post write.

Boston Post writes as follows: "I was not set in the best of health, apparently, an old streed, in the best of health, apparently, an old sequalitients one whom I had supposed to be filling a consumptive's grave long ere this. In answer to my inquiries he told me that when the medito men had exhausted their resources he definite to my inquiries he told me that when the medito men had exhausted their resources he estermined to put in practice a plan of his momental form the meditors. But in the second of Virginia, where he established himself in a farmhouse, and bought a farm bour the neighborhouse, and bought a fart about the neighborhood. At they, he told him about the neighborhood. At they, he told him about the neighborhood. At they, however, he told a stam, and we askeds more than 15 or 20 minutes at a time, and he had to pull very soon if the horse broke into a trot. Every day, however, he can be can be to a fact of any and a couple of health with very little stronger, and in a couple of the second in the action of the second and the attention of the second of the string and the second of the area of the second of the second of the action of the attention of a trot, it has a second of the area of the second of the action of the second of the second of the action of the second of the secon EFFECT OF AN IMAGINARY INJURY.—A GIT.—A GIT.—A GIT.—A GIT.—A GIT.—A GIT.—A GIT.—A GIT.—G. GIT. PETROLEUM AS A MEDIOINE.—Dr. Blache states, in the Bulketin Thermogentique, blat a treates, in the Bulketin Thermogentique, blat a treates in the Bulketin Thermogentique, blat a treater of petroleum, having been proinbited by a prefect from distributing petroleum in medioinal dose to its all doses, the fact led to an inquiry being made as to its alleged utility in affections of the cheek as the result, that in obvonic Virginia being that first preprimented with Dr. Blacke at see, as the result, that in obvonic bronchitis, with abundant expectoration, it capially diminishes the amount of the secretion and the paroxyams of congrings, and in simple formation of the secretion bronchitis, rapid amelioration has been obtoined for too shorts a time as yet to allow continued for too shorts a time as yet to allow beyond the fact that it diminiahes expectoration, which also loses its purulent obaracter. The petroleum is popularly taken in doses of a teaspoonful before sech meal, and after the free the come persons disappears.

MEN.—Galton has pointed out some very curious facts concerning the oblidren of profession one facts concerning the oblidren of profession ity of the members of some of the largest soien; this cocieties of London, that the legal profession presented the most eminent men and the towest idiots. The medical profession presented the most eminent men and the largest sand leadly elergemen, who produce the manner and the largest sand leadly elergement, men and the largest number of iminent men and the largest number of idiots and feeble-minded. The lawners are stoned or of idiots and feeble-minded in the law men as the clergy. The clergy gave origin to six times as many eminent the law men as the clergy. TELEGRAPH WIRES IN CITIES.—The troubles attending the carrying of felegraph wires in cities on poles at the usual elevation are many and well known. Placing them underground esticuely what is known as the "Iflad tower system what is known as the "Iflad tower system what is known as the "Iflad tower system" has been introduced into St. Louis, with they are out of the way of the Tire Department. The bight of ordinarily high buildings, so that they are out of the way of the Tire Department. The towers may be from 400 to 1400 feet apart, the streath, and may be used for telegraph, the streath and power purposes, including wires to turnish electric power for street rail-ways. The standards of the towers will be of large pipe, and will also be used as stand-pipes under control of the Fire Department, under control of the Fire Department, under control of the Fire Department.

WOMEN AS DOCTORS,—The proportion of men to women in the medical profession is 35 to 1. There are now 5500 women holding first-class medical diplomas, and sil of them have won their sheepskins since 1850.

## MINING BUMMARY.

### CALIFORNIA.

The following is mostly condensed from journals published in the interior, in proximity to the mines mentioned.

WOOD'S MINE.—Calaveras Prospect, Oct. 15: We have beard several good reports from the Wood's mine on San Antone creek. There are several fonct of on the dump at the mine and a rich body of ore has been opened up in one of the lower leads during the last week.

The ore now being mined will go from \$500 to \$500 to \$600.

Modoc.

Another Coal, Mink.—Independent, Oct. 13;
Supervisor Jacobs of Lake City dropped into the orlates of soal, which he said was face and left a sample of coal, which he said was creek canyon, about two miles above the policy where the road toresees the creek. Mr. Jacobs says that after the cloudburst, which occurred on the that after the cloudburst, which becourted on the that after the cloudburst, which become on the bedwards of the creek. Mr. Repart of the point the canyon, discovered among the debris that had Jacobs left home, the esbait was eight feet deep, and for about two miles, Mr. R. Deggan to sink a shaft fore some specimens which proved to be seed of the creek. Up to the time Mr. Jacobs left home, the sbait was eight feet deep, Algored down some specimens which proved to be so a some of the creek. Up to the time Mr. Industry the one was not continuous for the depth, there is a large body of the vein was not continuous for the depth. All though he coal swisting in that there is a large body of the creek. Up to the time Mr. The specimens that had not a supervised that there is a large body of the creek. Up to the time Mr. All the vein was not continuous for the depth. The specimens that have been taken out have undergone a fair test and readily burn in a blacksmith's forge, fair test and readily burn in a blacksmith's forge.

BODIE BULLION.—Esmeralda Wesses, Oct. 15: Joe Maguire was a passenger on the Bodie stage last Tuesday, or a route for San Francisco. He informed the writer that he shipped builton to the value of \$25,000 last Monday, which is the proceeds of three months' work on his contract in the Bodie mine, at months, work on his contract in the Bodie mine, at Bodie. The lease does not expire until next February, and Joe has a number of men employed taking out large quantities of ore.

Mono.

Inyo.

PAYING WELL,—Inyo Index, Oct. rs: Jos. Diaz, the recent strike in the Lensch mine holds out and the ore now being mined will go from \$200 to \$300 to the ton.

URIBYOTEB.

El Dorado.

GRIZZIY FLAT.—Placetville Observey, Oct. 11:

H. H. McClennan, superintendent of the Melton mine, Grizzly Flat, says there is a healthy sculvily in mining ciroles in his neighborhood, and that the general prospects were never brighter.

AIMBORING.

Ambador.

South Spring Hill.—Amador Ledger, Oct. 15; 16 South Spring Hill. The only work on hand is repairing the fasht, which gives employment to four repairing the shaft, which gives employment to four men. At the mill severything is at a standstill, washing for water, The ore bins are full, but milling is an increased water supply for the canal. Archibald and lines and a state supply for the canal. Archibald get the matters of the Mmador Queen Minning Co.

By McCaw of Oakland is in Jackson endeavoring to get the matters of the Amador Queen Minning Co.

Several Mills are now in the mines doing excellent work. The "Economic" is not only a mill for small mines, but we believe it is destined to supersede the old stand in mills of the languagest capacity.

Goes with each Mill. We also have a suitable

We have here the Stamp Mill in a cheap and simple form. The high diop of the old stamp is more than compensated for by the great weight (1200 lbs, each) of our stamps, and the repidity (300 strokes each per minute) which which they run. There are 4500 strokes of the aboes on the dies per minute. Less power is required than in that there are 4500 strokes of the annount of work.

The Mortar has screens at both ends, giving ample discharge. There are no cams or tapped to wear or be adjusted. The stamps adjust themselves as the shoes wear.

Over—Copies of U. S. and Foreign patents turnlahed by Oraw—Copies of U. S. and Foreign patents of the possible (by mail potential foreign patents of telegraphic order). American and foreign patents are foreign patents of Patents, at reasonable involver transacted with portice security, at reasonable involver transacted with patents are security.

### Notices of Recent Patents.

Foreign Patent Agency, the following are Among the patents recently obtained through Dewey & Co.'s Scientific Press U. S. and

S. F., No. 371,364. Dated Oct. 11, 1887, The cable to be used in connection with this grip has enlargements at regular intervals along its length. The grip, by its mechanism, is opened or closed, and when closed one of the enlargements comes in contact with the gripping mechanism, an air cylinder with a piston, and the air is gradually comvent a piston, and the call the gripping mechanism, an air cylinder with a piston, and the call the gripping mechanism, an air cylinder with a piston, and the call the gripping mechanism, an air cylinder compact with the enlargement on the cable.

Contracts.—James H. Culver, S. F. No.

Collyer, S. F. No.

371,489, Dated Oct. 11, 1887, This invention S. F. No. 371,364, Dated Oct. 11, 1867. worthy of special mention:

Cable-Railway Grip.—George Rischmuller,

771,489. Dated Oot. II, 1887, This invention relabes to certain improvements in calipers for talkers for exterior and exterior dimensions. It consists of a jointed leg upon one side, which allows the leg to be opened or closed, indecemently of the ordinary fulcrum-joint, and a stop and holding serew by which it may be returned to exactly the same point and locked. Inside measurements can also be taken, the legs of the calippers being covered so that the points project in poposite directions. The device is quite simple and by its peculiar construction it is possible to take and retain accurately the sizes of parts which could not otherwise be measured. Blass during could not otherwise be measured. 371,489. Dated Oct. 11, 1887. This invention

BLAST GOVERNOR FOR GRAIN-CLEAUERS.— Daniel Best, San Leandro, Cal. No. 371,411.

**Р**ЕАМЕ РОЕ ВЕАDING AND **М**ОМВЕЕ **С**А**R**DS. Daniel Best, San Leandro, Cal. No. 371,411.
Dated Oct. 11, 1887. This governor for the blast of grain-eleaners consists of vertically pivoted shutters extending across the air-inlet and obliquely projecting lugs, in combination with a uniting-bar pivoted to these lugs, so that frey may be opened or closed simulateously, the bar acting as a stop against the edges of the transverse bars in their open position. By the produced or closed simulated outlier, by the produced or closed simulated, will control produced, which, when adjusted, will control that the great adjusted, will control being blown over or lost.

Define blown over or lost.

Define but the perfectly elsaning-shoe so be sing blown over or lost.

being blown over or lest.

Frants Lu, Makson, San, Jose, No. 371, 385.

Dated Oct. II, 1887. This is a device which the inventor calls a 'reading language and number frame." It consists of jointed or inpeed standards with detached bases, having only not eside of the standards a board with detached bases, having poon one side of the standards a board with detached bases, having convenies for the reception of different positions. If the standards with detached of different positions. The standards with detached by the convenient of detached by the convenient of the standards with detached by the convenient of the standards and the standards and the standards of t

VANNING MACHINE, ORE CONCENTRATOR THE FRUE

## (COC'0995) FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the celebrated "Triumph" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the experior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their tranes being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are objust as compactly as their requisite strength will permit, weigh less, resteadiness of motion when operated. They are onstructed in the telegraph occurrence in the discharge transportation is reduced, and occupy less mill room when set up.

An important importeement has recently been introduced into their construction, which consists of a Airerle Thaire, eat notion which takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal information of the discharge from the feed and amalgam bowl. The improvement is in the reciprocal information of the discharge from the case in different mining districts and which takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal motion which is made in the recently been introduced into their ment of and which takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal motion in the land occupy less and many testimonials, from well-known Superintenates of mines in different mining districts of the United States, bearing evidence of the efficiency and appreciatly of this form of Concentrator, and we shall be pleased to send Circulars covering evidence of the efficiency and appreciatly of infections for setting up and operating freese for any considerable order.

Machine and are ready to quote special prices for any considerable order.

An interest of mines in different and occupies of the efficiency and upper order.

Chlorination Process in California.

Details of Operations in Amador County.

The following notes on the stamp-mills and chloring and consoli-

Small, E. M., Oconomowoc, Wie.: dated Gold Mining Company, Amador county, Cal., were read at a meeting of the American Institute of Mining Engineers by George W.

Small, E. M., Oconomowoc, Wis.:

The ore, as it is raised from the mine, has as average assay value of \$11 per ton, otherly in the form of free gold. All the ore goes directly to the stamp-mills, of which there are two. The older and larger mill contains 16 batteries of five stamps each, with one frues to vanner to each battery. The new mill is driven by each battery. The large mill is driven by feet, and a consumption of 600 miners inches each battery. The smaller mill is driven by "hurdy-gurdy" wheels with a pressure of 16 set, and a consumption of 600 miners inches of water.

of water, de the trailings from the stamps of At Doth mills the tailings from the of At Dese on their way to the Frues. In each set of plates are so-called or upper one is copper; the rest are so-called silver plates.

The bullion from the stamps is about 800 fine in gold and 200 in silver.

The Concentrates From the Frues

Average from the Frues
Average from the Frues
Average from 14 to 13 per cent of the ore
stamped. They very rarely exceed 2 per cent.
I was unable to get the exact assay value of the
and \$200 per ton.
The concentrates, but it is said to vary between \$100
and \$200 per ton.
The concentrates are breated at the chlorination works at the rate of 100 tons per mouth.
The capacity of the works is somewhat greater
then this, but as the supply of concentrates is
limited it is not deemed advisable to work them

THE FAY FALM.—Rev. B. C. Henry states that the fan palm of China grows only in the San Ui district, 20 miles long by 10 miles wide.

The trees do not yield leaves suitable for fans until six years old. Some trees are said to be over 100 years old. Some trees are said to be over 100 years old, but the tallest measure only about 12 feet. From April to November the leaves are cut monthly, from one to three to being taken from each plant, From 10,000 to 20,000 people are employed.

Cont. Dust Fuer. —Briquettes or fael bricks from coal dust are growing in favor and defended and in factors. Bookland in the the ranks of briquette-mating nations. The factors and pig-iron-making from there is now erecting a plant with a capacity.

Utah's Ore-Producers.

ing interests of the Territory, convened at the Chamber of Commerce rooms last evening. The attendance was quite large, including most of the beaviest mine-owners and ore-handlers in the city. The second meeting, says the Salt Lake Trit.

The second meeting, says the Salt Lake Trit.

was, of the Usah ore-producers, who have been working constantly of late for the organization of an association for the protection of the min-set in the protection of the protection of the protection.

The meeting was called to order by the tem-file offy.

The meeting was called to order by the teer the porary chairman, J. E. Dooly, and after the resport of the minutes on Organization.

The report was presented and after some dis-cussion on the eilver clause, and some amend-ments, the report was adopted as follows:

The Report Was adopted as follows:

The Report.

Ve, the undersigned, residents of Utah, and deeply intercested in her prosperity and particularly intercested in her prosperity and particularly intercested in the advancement and properties into an association to be called the Utah Ore-Producers' Association.

Its object shall be the better protection of ore-producers and the advancement of the minimal producers and the advancement of the minimal intercests of Utah. In pursuance of this, we piedge ourselves:

I. To stand together and support our mutual intercests.

ing interests of Utah. In parsanace of this, we pledge ourselves:

1. To stand together and support our mutual in a district the same of the partonize such reductions were as will meet us on fair terms, half-way, tween the miner and smelter, so we may obtain the atlants of the profits of our ores.

3. We pledge our support to independent as a miner and anelter, so we may obtain the anner and smelter, so we may obtain the anner and anelter, so we may obtain the anner and anelter, so we may obtain the anner and anelter and anelter and anelter and anelter and anelter and anelter and which adjusts its rates in a sampler and assayers

4. We pledge our support the miner and anelter and being considered—with the miner and anelter one our ones and bing the place and which adjusts its continuous and the continuous and the place our best endeavors, in conjunction and states, to ward off the legislation which and states, to ward off the legislation which and states to place lead ores on the tree list, and states to extend the coinage to the maximum and states, to ward off the legislation which allowed to expect the cour best endeavors, in conjunction and states to expect to order and action the interests of the assacration of the allowed the court of the saron connection to the interests of the assacration and the contract and and states and a state our best on the same before the country a knowledge of the massarreless mineral interests of the research of the interests of the operation and the organization.

5. In case on tair region, and streament of the investible of the casting works for the massarreles minerally and and one of the interest of the casting works for the manner of capital and the organization and the committee of the and actions of the sacontive committee.

6. The offers and prepare and may and the executive our interests and have the executive our interest of the and prepared our and prepared out and prepared out and prepared out and p

The treasurer shall keep the moneys of the association and distribute them on the order of the president or vice-president, countersigned the president or vice-president, countersigned by the secretary.

The executive committee shall make terms with smelters and relicoats; shall gather information regarding the Territory and the business of mining; shall, in short, be the working force of the association in any important contract without the association in any important contract without the approval of the majority of the memorial of the secons approval of the majority of the memorial of the secons of the memorial of the secons of the memorial of the memorial of the secons of the memorial of the memorial of the secons of the secons of the memorial of the memorial of the secons of the memorial of the memorial of the secons of the memorial of the memorial of the secons of the memorial of the memorial of the memorial of the secons of the memorial of the memorial of the secons of the memorial of the memorial of the secons of the memorial of the memorial of the secons of the secons of the memorial of the memorial of the secons of the memorial of the memorial of the memorial of the secons of t

association.

HALE AND MORGEOSS.—On the 1350 level the st crosscut from the bottom of the winze has been st crosscut from the bottom of the winze has been frended 48 feet, making its length tap feet, 70 feet which is in fine-looking quarts that gives some it assays. From this drift, about 70 feet back of a fact, have started a drift north in the quarts else.

This work will be finished this week, and work can then be tesumed on the several levels below the 80 level. Are adipping 60 tons of one per day to the Mexican mill, which amount will be increased when there is sufficient water in the Carson river to justify it.

the shell is a couple bundted feet, from which point a shaft is being aunk.

Above THE ONTARIO.—It comes from a reliable source that several sales of mining ground, situated been made recently by poor prospectors to one of the leading companies opening, many season in the leading companies opening, many season in the leading companies opening, many season in the leading companies opening, many forms in eventually for a share of the leading of the leadi

Andez.—Running a west drift on the 240 level.

ing well.

JUSTICE.—On the 250 and 350 levels the prospects are good and ore is being extracted. There are over 1000 tons of pay ore on the dump.

BEST AND BELCHER,—Have stopped the upraise from the 700 level in the east drift, and there is no total to to the 100 method of the seast drift, and there is no total, 327 feet. Joint Mexican-Union drift on the 1300 level is being driven.

JERRA MEVADA.—The south lateral drift was extended 84 feet, total, 519. The face is in a portant of the 100 method of the 100 meth

ALPHA, EXCHEQUER AND IMPERIAL.—Are cross-cutting on the 12s level 150 feet south of the north line of the Exchequer, All the machinery is work-ing well.

OPHIR,—The west drift from the winze on the agone level was advanced so feet. It is running to gooneed was advanced so feet. It is running to astronger of quartz and porphyry.

SCORPION,—Since the last report the east drift on East of the last report the east drift on the shelf advance do feet, making the length from the shaft soo feet. The lace of this length from the shaft soo feet. The lace of this and the shaft so feet. The lace of this and south in the wein; and are drifting north south on the soo level, also.

say, Oger, —In the last two days ore averaging from to go go per ton has been struck in the deepest on time, which is over ago feet from the satisface. It will take some time to determine its estation.

IMPROVEMENT IN MINING.—Elk Mountain Pilot, OCL. 20: The summer manney assoon is about over a face of the discount of the summer of the solution of the summer manney assoon is about over after of the summer between the seven years do the solution of the save been in the development of those who have fairfully study by their claims. Every year looks a little brighter, by their claims. Every year looks a little brighter, by their claims. Every year looks a little brighter, by their claims. Every year looks a little brighter, and with the same amount of courage and persevertand with the force of the same will certainly result in this country being the future great and with the same amount of courage and persevertand in the same the future great little worked and the Rorest Obers of the Ballion King has improved very much from this being worked and it proves to be the mine we have the force of years, and hit proves to be the mine we hear to be the mine we have in to be. Aside from these mentioned there of the force of the same will est to be. Aside from these mentioned there have no claims, and why mine-owners will let their claims remain idle in so rich a camp is a mystery that we cannot solve.

with the manufacture of the company is shipping its concentrates to San Francisco, and they form no small part of the bullion output. Work on the San Rales commenced this week and will be actively prose-

# continues to produce good ore, and that he will make another shipment shortly. Phil. ### Mining Share Market.

Although the news from the Oomstook mines is encouraging, stocke broke badly this week, There is more or less activity in shere; but the people who deat in them do not seem to be very confident of any marked advance, just now, confident of any marked advance, just now, confident of any marked advance, just now. The is the originis Chronicle says: In Crown Point The is considered an infallible indication that the originis considered and in the stand to a considerable depth, and it is now thought certain that its downward considerable depth, and it is now thought certain that its downward considerable depth, but of the follower to the follower to the down the follower to the down the down

The the contrary desired to the engineers were of the engine of the engine of the engine of the engine

The men who built the engines knew what The men who built the engines they could best and never forced them. Years afterward, when steem navigation on all seas was common, Mr. Napier said that his success was mainly due to the incelligent and able mechanics who were employed in his works, A mechanic binself, he could appreciate the merits of the men who worked under his direction.

difficulty in obtaining employment, at home or abroad, where there is any work in progress. This ought to be an inducement for young men who are learning trades to make themselves masters of their business.—Ex. Skilled mechanics of steady habits have no

A YANKEE PISTON IN A BEITHSH STEAMSHIP.

We made a note, last Pedrusty, of what we thought was quick time in making a new pist thought was quick time in making a new piston to the steamship Alaska, the work being done at the Delatmater Iron Works, in this receiving the other was 100 inches, weighed 15, 000 pounds, and was 100 inches, weighed 15, 100 pounds, and was med and work, but the belone as well as if two months had been taken in doing it. The sequel to this job pary's offices that there was, after a voyage across the Atlantic, no evidence of anything the mater of the year of Deglish make and a steel on the piston was put in its the words, on the bis did not court. The piston was put in its stand for the year of Inglish piston was put in its bis on the piston pounds of the 3d of July place, and its there yet, for all we know. Thus and the piston of the piston, "set a naught by the builders," he mater no doubt will last to replace sevend we have the fiston was put in its bright English relatives have for all we know. Thus and we have no doubt will last to replace sevend we have the piston, "set any the mater of castings that our mater and of the piston, while and the last to he piston, but this done will be the out the piston was put in its bright English relatives have been the builders," the mater of the piston was put in the piston, we set the some things that our pringent properties and the piston was put in its pringer by the piston, "set a naught by the pullers." One of the piston was put in the piston w

TNTERCHANGEABLE LOCOMOTIVE MACHINERY.

The principal proprietor of the locomotive works at Rome, N. Y., is T. G. Mock, a man of rugged appearance, but in reality one of the most genial of mon and a furst-class mechanic.

These works are now turning out locomotives upon definite plans with interchangeable parts, as that any piece of the machine can be exchanged with the same piece on any other local comotive of the same type. This is considered a great advantage, "The interchanging of a great advantage, "The interchanging of machinery parts was started in connection with

tion of such literature in the state of its an inventive in the state of interests of the discovery by taking photographs of several persons present, as the price of the second, and in a few minutes produced a picture during the meeting. The price of the powders as prepared by the Berlin firm is esteed to be very low, and hence it is thought that they will readily come into general use. It would be of interest to learn tow the danger attending their storage and use to be grarded against. According to the Philiach is to be grarded against. According to the Philiach phis is to be grarded against. According to the Philiach is to be grarded against. According to the Philiach is to be grarded against. Among the other ingredients employed, in addition to the products from the essence of birch bark, are esoutings from the essence of birch bark, are esoutings, and an insulating ingredients employed, in addition to the products from the essence of birch bark, are esoutings, and parish and products from the essence of birch bark, are esoutings, and principles, kaolin, zino white and red ocher.

RARE MINERAL.—One of the rerest uninerals in the world has probably been discovered in the mountains along the river, directly below the city of Chattanooga, Tenn. It is the white, rust-proof iron ore, hitherto found only in gweden. It is said to contain 65 per cent of pure iron. The bed, distinctly marked by blose soms, is fully six feet thick and of great length. An assay is to be made in the East, where specimens have been sent.

Consoling with a fibrout special apparatus by at-bending with a fittle common sense to a few simple rules, Suppose we have a battery of first boiler, shut the damper nearly up and fire up one-half of the furnace, close the door, open the damper, and go to the next boiler and repeat the firing. Consumme Smore,—Nearly all smoke may

#### Scientific Progress.

Why Some Lakes Are Salt.

Why Some Lakes Are Salt, where she saltes as one American Igles, says Populor Science Monkly for July, it is too patent to require many words of explanation. It is probable that, when the sea, the lake beams had been already formed, and came up, therefore, boinfuring of water. In the northern and castem part of the continent, where the supply from point of the solf, being continuously carried asserting to be an imperceptible continuously carried as yesporation, as the Pacific Slope and the country about the salt, being continuously carried as gions, as the Pacific Slope and the country about the caste in the salt had been as diluted as continuously sark until, on accountry about the caste in the caste in the caste in the country about continuously sark until, on accountry of the district of the district of the case of the supply, the water level of the lake account of the table the case of the supply, the water of the Medicas of the case of the supply, the water of the Medicas of the case of the supply, the water of the Medicas of the case of the supply, the water of the Medicas of the case of the supply, the water of the Medicas and the current through the strait of the Case and one account of the table the scoeding the supply of the table the supply in the cannets as the current through the strait of the Medicas of the case of the supplies the more such and the supply and their supplies to being the most general of all redoubly we their salt the order of the table supply. The Usah bear and where the solic supply and their where must streams tall into supply, and their waters must solic the order of saline supply, and their waters must solvent has been reached. Fair progress has been material improvement. Fair progress for level. The vein is showing a much graster width than was developed by the drifts, requiring in width than was developed by the drifts, requiring in some places so-foot stulls. The usual grade and quantity of ore has been sent to the mill the past week.

IMPROVED FORM

DOORFE "ECONOMIC" STAMP MILL

We have here the Stamp Mill in a cheap and simple form. The high drop of the old stamps a more than compensated for by the great weight (1200 Hbs. each) of our stamps, and the pidity (300 strokes each per minute) with which they run. There are 4 shoes in each germp, so that there are 4500 strokes of the shoes on the dies per minute. Less power is required than in any other mill to do the same amount of work.

The Mortar has sereens at both ends, giving ample discharge. There are no cams or tappeet to wear or be adjusted. The stamps adjust themselves as the shoes wear.

Goes with each Mill. We also have a suitable AN AUTOMATIC ORE FEEDER

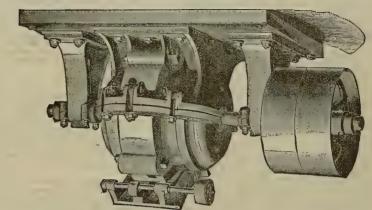

ROCK Breaker,

Several Mills are now in the mines doing excellent work. The ''Economic'' is not only a mill for small mines, but we believe it is destined to suverseder the old stamp in mills of the largest capacity.

#### The Chemehuevis Mountains.

The scarcity or water has been the great obsists of in prospecing and developing. A number of prospectors perished with thirts and in early days several were killed by hostile Indians. During the last four years we have noted the most important factor in bringing this section to notice was the discovery of a fine body of water adjacent to a mineral deposit, and, so far as known, the only available water within 60 miles. and silver in these rugged mountains in Arixons. The scarcity of water has been the great obstathere were rich and extensive deposits of gold For a number of years it has been known the

where, We are informed that the Chemehuevis Mine and Milling Co. have secured by patent a body of water, but of hard selient to this body of water, purchased the water right, and are erecting a mill to crush the one now on the dumpe. A leave enterprising men having taith in this section leave shown great tenacity in developing the olaries.

#### Notices of Recent Patents.

worthy of special mention: Among the patents recently obtained through Dewey & Co.'s Scientific Press U. S. and Foreign Patent Agency, the following are

Worthy of special mention:

PLUS-PROTECTOR.—R. W. Gorrill, Oakland.

No. 372,141. Dated Oct. 25, 1887. This improved device for protecting piles and obter protecting piles and obter finders from the ravages of marine insects consists of an inclosing covering of mire oloth, is larged as a short distance from the body of the polity of the plants of an inclosing covering or hydraulic cepting and a covering or filling of hydraulic cepting to the plants of the plan

Acoustic the state of salt waker.

Separative delivers of salt waker.

John L. Heald, Crockert, Contra Gosta Co.

Mo. 372,146. Dated Oct. 25, 1887. Almonds and similar nuts are separated from the outside hulls or overings by various mechines, but these machines leave the almonds and shells all mixed together, and the operation of separating mixed together, and the operation of separating them has hitherto been very tedious, as it has necessarily to be done by hand. Mr. Heald's device is intended for separating the loose hulls from almonds or similar nuts which are mixed together after the hulls have been stripped from almonds or similar nuts which are mixed from them uts. It consists of a table having which is given a shaking motion so that the operated opening or perforations, which is given a shaking motion so that the operate of the supplemental of the passage the hulls are discharged through the opening, while the nuts will pass off separate from them.

It was a strained to the supplemental of the strain opening, while the nuts will pass off separate from them.

Mental Maratic Latter.—Michael J. Donovan, S. 1837. It the passage of the passage of the state of the the state of the

FIVE HUNDRED AND FIFTY

# Room 7, No. 109 California Street,

The present improved form of the celebrated "Triumph" Ore Concentrator possesses many advantages over any other style of Varners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner, their trames being of iron, insures their solidity, durability, and perfect stackiness of motion when operated. They are compactly as their requisite strength will permit, weigh less, reservations when no perated. They are only as their requisite strength will permit, weigh less, replaced in froigh less, in provement in the case of transportation is reduced, and occupy less mill room when set up, have noted their construction, which consists of a Ritwilk Tabler, placed in front of and which takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal motion which is imparted to this table by the longitudinal motion of the shaking frame to which the table is attached to the shaking frame to which takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal in front of and which takes the discharge from the feed and amalgam bowl. The improvement is in the respiration of the United States, bearing evidence of the enforcement supportantly districts of the abstract of and which the statement of the constitution of the superiority of this form of Concentrator, and we shall be pleased to each Gronials covering gue the feeting my and operating these pleases the discharge group letters of testinony, and, as well, directions for setting up and operating these and Gronials prices for any considerable order.

An integral of the constitution of the enforcement is a subject of the state of the enforcement of the enforcement is a subject of the enforcement o

IRON IAOE.—Beautiful lace and other figures of the most delicate description are now made of the most delicate description are now made. A lack more increase of the mold into which the molten metal is to be poured. It is moud that molten iron ean be run upon the most delicate fiber, after it has been carbonized, without injuring the earbonized fabric, every without injuring the earbonized fabric, every thread of which is thus produced in delicate fiber as the earbonized in delicate increases.

The Mines and Miners.

BY PEDRO CASTERA,

[Translated for the Press from Et Minero Mexicano by M. M.]

(Vontinued From our last.)

Nothing is more monotonous than watching in more more more than in a mine, nothing which better illustrates the Cambrandt with dark ground and luminous, gives an exact ides of my surroundings that pieces the constructed with Agrees and minicularity. A great one constructed with planks

pives an exact idea of my autronidings that in the base of my autronidings that in the base of my autronidings that in the base cross of a forest room constructed with plants of the content of the content was filtrating, burn, and cashing in the chimney and cashing a reddish light; some beds, many arms and a state wood creeding in the content of the country of a protein, which are completed by the groundwork as picture, which was completed by the groundwork as picture, which was completed by the groundwork as time a picture, we were emptying from time to the table, we were emptying from time by the state of purch, and the state of the content of the coling the state of the content of the coling the state of the complete of the coling the state of the complete of the coling the truching the state the oracline of the coling the state of the complete of the content o eM behauoring on W snoinsquo of T

The Oompanions Who Surrounded Meeting to lorger train ton.

Had their families at the capital and were precladed from their conveniences, from all their concerns, in mestic snighments, from all their concerns, in order not to leave to other hands the exploitation of the treasures which an imagination, the fatigue, had auggested. It exclarge for the sweet peace of a tranquil freside they had the fever of ambition, the integes of the transport of angular developments. The fatigue of labor and the final fines a fatigue, the fatigue of labor and the fatigue and unchained in those and the fatigues of a fatigues of the fatigues of the peace of a fatigues and the fatigues of the fatigues of the fatigues weakly in a fatigue were also a fatigues of the fatigues of While In that Drowsy State,

There came to me these graphic lines of Cam-

"Y luego que le noche hubo pasado, Ella cerca de mi— ¿ Por que te alejas tanto de mi lado? Tengo miedo sin ti—"

"When the night of that day began, She, at a distance from me— Wby dost thou come so near me? she said, I am aftaid of thee.

"But as soon as the night had passed, She, near to me— Why dost thou get so far from my side? I am afraid without thee,"

Thus thinking, and guided by the hand of the pand of the angel who keeps the dots of the panets of the angel who keeps the dots of the panetstaing and dreams. I went to sleep, with the penetrating gazs of the blue eyes of that guardian upon me, £4 o' obtoick max morning, by the tramulous hight of the stare, I started for the City of Maxnos, and the condition of the confilms and I have, and I determined, and the stare, I have a super the condition of the mined to stop in order to say fareache the evening heppy couple from whom I parted the evening one of those delicious dawns which only our oil. The couple from whom I street the evening the earth, and with the exquisite fresh, moist fabe earth, and with the exquisite fresh, moist fabe earth, and with the exquisite fresh, moist oven the lawses, were discharging aromas, and impregnated with I know not what dor of howers. Hot only the buds, but I believe that cover the lawses of loaming the sorted the sorge of thousands of birds, and the earth where saluting the coming day.

Where a saluting the coming day.

Were saluting the coming day.

The Horlzon was Diaphanous,

The sky serence and bordered by light cirrus, white and spumons, which were passing through white and spumons, which were passing through that colors of the trainbow like immense opals that might have been incrusted in that sapphire of deepest blue. The snow of the volcanoes was needing the sun, and the distant hills and was greeting the sun, and the distant hills and walleys were covered with a kind of undulating verse.

"THE FOUR ELEMENTS."—The evolution of obsos into earth, sir, fire and water can be represented in the following manner: In a narrow plais of one-fourth of its capacity; for the next fourth, of one-fourth of its capacity; for the next fourth, red. On an abaking this mixture together, you wine, tinted blue; and leatly, turpentine, inted on relating this mixture together, you will have a representation of chaos; but soon, on resting, the elements will separate them on resting, the elements will separate them the plue spirit air, the red turpentine fire, and the nectoury will represent earth, the closure of chaos; but soon, will have a represented will separate them. Are often taken for any water outs, and strict, and solony where are solved outs. Siphonophores. Are often taken for animals analogous to the meduca. They have a great variety and profit alon of parts, each part being the equivalent of a hydra or meduca.

Besides the nourishers we find individuals in the neighborhood of which are only reproducers, in the neighborhood of which are escual individuals resembling meduca in form, All these individuals are fixed upon a common axis, which thosts like a serpent upon the water,

in a careless way they soon become reciprocally necessary. In the necessary, In the series of seathers seven different individuation of seathers are necessary stated in the necessary of individuals of both sexes 6, helses. 7. Februaries, 6. Hepproducers of individuals of both sexes 6, helses, 7. Februaries, 6. Helses, 7. Februaries, 6. Helses, 7. Februaries, 6. Helses, 7. Februaries, 6. Helses, 7. Februaries, 7. Februar LYSECT REPRODUCTION.—Pethaps no more apparation of the wonderful representation of the wonderful repreducive power of certain insects could be given ducive power of certain insects could be given that that that contained in a work recently published by Theodore Wood, an English entonologist. It is assumed, first, than a single grain molegist. It is assumed, first, than a single grain weigh no more, collectedy, that four a single grain and second, that fourly a very stout man can weigh as much as 2,000,000 grains. Then it is found that if multiplication were entirely unsuch of a single application were entirely unsuch of a single application of the descending of a single application of the human point of actual matter, to more than 500,000,000 acty stout men, or one-third of the human population of the globe, supposing each person weigh 280 pounds.

BINGULAR ILLUSION OF VISION,—Attention bas been called by a Frence described to a curimary account for the apparent oscillation of the vision which it is thought one illusion of the vision which it is thought may account for the apparent oscillation or the swingling and called by the Germans "sternsohwanken." When the eye looks for some time at a small, feelly the Gody apparent to escillate or to describe certain curves. M. de Parvelle says that this is a phenomenon of the subject of the same nature as the movement of a star observed when a person leans this second as the movement of a star observed when a person leans his head the star apparent to be spitated in its place, and the star apparent to be spitated in its place, and the star apparent of a spitated in its place, and the star apparent of a spitated in its place, and the star apparent of a spitated in the star apparent of a spitated in the star apparent motion.

The sty should be clear. A lunette takes away the spitate should be one, and the styre and a spitated in the spitate apparent motion.

Elling the wester by tearing it to pieces. The poison may be pressed out of the sting with the fingers or a pair of forceps, when it is found to be a milky white fluid with a very pungent smell resembling that of formic soid. THE SCONFION'S STIME,—Professor A. G.,
Dourne has made a number of experiments on
three species of scorpions found at Madras, with
the object of determining whether the popular
notion that scorpions can commit suicide is true.
He finds that it is undoubtedly physically impossible for a scorpion to sting itself in a vulnerable place, and when one is placed in very
unpleasant circumstances, it not unfrequently
in quite powerless to kill the same indridual or

Towner, the same animal, cells having different physiological properties assume different forms and contiguity does not modiffy them. According to Claude Bernard, we may kill all the cells of one kind without injuring the other.

USEFUL IMFORMATION.

Care of an Emery-Wheel,

The second of an Emery-Wheel, is a common oustom when an emery-woel is removed from its spindle to abuse it. Some harge it up on a mai, with one side expense it is to no on a mai, with one side expense it is to no on a mai, with one side expense the trup on a mai, with one side expense the trup on an uneven bearch, and others, against a demp ground and beach, one adge against the back of the back of

AMERICAN WORKNEN IN EDUCOFE.—The London of the N. Y. Workl, writing don correspondent of the N. Y. Workl, writing to that pept, asys there are large numbers of toolish Americans continually going to Europe to seek work. He says: "The fact cannot be too widely published that Europe is no place for American workingmen of any class. If they come over here with positions secured in advanced to proverty and claitrest. And if their places are to the said of airtrest. And if their places to poverty and claitrest. And if their places are lost, it seems almost impossible for them to poverty and claitrest. The competition in Europe anong the workingmen is so fiction, and to present a fact of the competition. He competition with those in the count of the competition with those in workingment and competition with those in would venture to come here without careful into won country, that it is hard to understand your own country, that it is hard to understand the while the immense tide of toreign immen that while the immense tide of toreign immen that while should teach American working men that while should teach American working in mean that while should teach American working mean that while should teach American working and seath and that we should be very cantions about exchanging a condition which is, perhaps, not all we could desire for one which is undoubtedly much worse.

Unexpected Explosions.

Persons in charge of poilers used for heating only cannot be too careful, as several cases have been reported which show that explosions can occur with a boiler coold and open. There are several cases on record where gas has accumulated in boilers, and the person in charge, on placing a lighted forch in or near the boilers, has produced an explosion that did damage.

GOOD MEALTH,

To Remove Sherherers' Marks,—As is well known, the removal of ahepherds' marks from the wool occasions great trouble. They are trequently cuts out with sheets. This, however, is difficult, costs which they remove these marks quickly by which they remove these and containing a sufficient quantity of watergales to 20 minutes in a bath heated to 104° Fahr, gas do containing a sufficient quantity of watergass to raise the solution to 2° B., and besides this four pounds of soap.

charge, on placing a lighted torch in or near the boilers, has produced an explosion that did boilers, has produced an explosion that did munge.

Several cases are reported where boilers have stood empty for a long time, with blow-off stood ones, with blow-off stood ones, with blow-off stood ones, and the boiler was filled with some gas, which, being carelessly ignited, produced an explosion of sufficient force to resemble a seam explosion, and do serious damage.

Another case: An engineer, to soften the scale in a boiler that was out of service, poured a few when ready to put the boiler in service, placed when ready to put the boiler in service, placed a light in it to observe its condition; the result when ready to put the boiler in service, placed a light of the light volatile gas, evapment and cuttle.

In the service for a time, be sure to accertain it there is minus hair and cuttle.

In all cases where a boiler has been out of service to a time, be sure to accretizin if there is a service for a time, be sure to accretizin if there of the interpretation of a time, be sure to accretizin if there are the service for a time, be sure to accretizin if there is any or a time, be sure to accretizin if there are the order of the interpretation of a time, be sure to accretizin if there are a commission of a time, but the search of a time, and the search of a time, and the search of a time, be sure to account and in the search of a time of a time, and the search of a time of a time, and the search of a time, and the search of a time of a time, and the search of th

HAPURITIES IN CITY AIR.—Prof. Tyndall has developed the fact, in his microscopic studies, that the slt of large towns and oities is silled above by the slt of large towns and oities is silled able to the slt of every inagin. The horse-cers and beavier teams grind the dust in the sir; there are also found disting with it dust and gasen contributed for sir is assily suspended in the sir; there are also found disting with it dust and gasen contributed by every industry, stoms of food, fine particles which abound wherever there is thrown off dusting the ingr of the inhabitants there is thrown off dust ingr of the inhabitants there is thrown off dust of cotton, linen, velvet, fur, wool, etc. All these and countlies other products dast in the atmosphere of all large oities. Surely, it is not difficult to understand why a residence in the country promises better health and a longer lease of life.

INOREASE IN THE DURATION OF HUMAN LIFE.

"Only 50 years ago," says Sir Spencer
I Wells, "the average duration of human life in
Great Britain was 30 years, to years the scoreding
to estitistics, it is 49 years. In 50 years the
population has increased by eight millions of the second was to work may be put

Stocktron Hill,—Mohave Minter, Nov. 5:

Altining matters continue quiet, but this may be accounted for, as this is the season for the annual assessment work, and many of those who have claims and do not believe in doing their work on the first and do not believe in doing their work on the first in the bills swinging the piek these warm, ballmy days. The C. O. D. is looking better than ever, Abl the different workings show good bodies of ore, and we can soon chronicle regular shipments. About 35 men are employed in the mine and works. About 35 men are employed in the mine and works. A contract has been detected when it to drive 5 of tert from the fire junction of the Tiger and Cupel veins, and great the juncation of the Tiger and Cupel veins, and great the juncation of the Tiger and Cupel veins, and great the juncation of the Tiger and Cupel veins, and great the juncation of the Tiger and Cupel veins, and great the juncation of the Tiger and Cupel veins, and great which yielded such rich retraches the ore chuuc which yielded such rich retraches the ore chuuc which yielded such rich retraches the ore chuuc. THE KENDAL BATTERIES must be seen to be appreciated. They deceive their looks, and the most most unus admit they are absed of stamps for medium bard quartt, at any rate, They started off medium bard quartt, at any rate, They started off as pretty as a quarter horse, do their work smoothly, as a quarter horse, do their work smoothly, and stee they as a stamp batteries cometimes indulge in. Their discharge is bettered sometimes indulge in. Their discharge is bettered sometimes indulge in. Their discharge is the sample. The main their oost is not one-fourth that of the stamps. The main their convincing proof of their best short in more in good of their discharge in good outbeart into as fast as men and dynamite can drive it.

Mr. Holland has been working for years upon them; be finally dropped complicated and intricate methods and sufficient reasons for keeping secret their construction for the present, but they will undoubtedly be in the best and largest mills on the coast in a short time.

ROCK Breaker Goes with each Mill. We also have a suitable

We have here the Seamp Mill in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the rapidity (300 strokes each per minute) with which they run. There are 4 shoes in each stamp, so that there are 4500 strokes of the shoes no ruhe dies per minute. Less power is required than in any other mill to do the same smount of work.

The Mortar has screens at both ends, giving ample discharge. There are no cams or tappaped to the stamps adjust themselves as the shoes wear.

#### Mining Share Market.

Although transactions in the mining share market are of small volume, and the prices low, there seems among dealers an expectation of theire are runous of irrelier times before long. There are runous of irrelier times before long. There are runous of irrelier times everal of the Comstock mines this week, thus adding to crushing facilities. The Carson Tyvèure says: "The water in the Ostson Tyvèure says: "The water in the not enough flows to help mill operations much, not enough all of them are in operations much, judging from the lengthy ore trains, the work-ingoing from the lengthy ore trains, the work-ing all the mills is an actual necessity."

MINERS, WAGES LOW ENOUGH,—The miner's life is a hard one, Such accidents as that of the Yest mine and worse ones are the King of the West mine and worse ones are of frequent occurrence. With the best of precautions a miner is lable at any time to be laid up with a broken limb or lose his life and to have his laften and the world. His work is hard and in many mines extremely unhealthy. His board coats from \$\frac{3}{2}\$ to \$\frac{3}{2}\$ to week. All his necessary expenses are a heavy drain upon his purse, He such mines extremely unhealthy. His board expenses are a heavy drain upon his purse, He fortunes that are made by the owners of the fortunes that are made by the owners of mines, surely the wages of their employes should be kept at the present figures, instead of reducing them to \$\frac{3}{2}\$ and \$\frac{2}{2}\$. So sad \$\frac{2}{2}\$ should be kept at the present figures, instead of reducing them to \$\frac{3}{2}\$ and \$\frac{2}{2}\$. So as is proposed, MINEES, MAGES LOW ENOUGH, -The miner's

Wews of the advance in copper was received with pleasure in Arizona, where the copper interests are large, Co., E The debts of the Monte Cries mine, Mono o., have been paid off and work has been remed.

#### Notices of Recent Patents.

Dewey & Co.'s Scientific Press U. S. and Foreign Patent Agency, the following are Among the patents recently obtained through

Weekey & Co. 8 Scientified Passa O. 5, 3 and Tronging Patent Agency, the following are worthy of special mention:

Loom Shuttle.—Chas. G. Root, San Quentin.

Loom Shuttle.—Chas. G. Root, San Quentin. Mo. 372,239. Dated Oct. 25, 1887. The invention relates to shuttles arms earned stabilities are and it consists in the combination with a shuttle sold it consists in the combination with a shuttle body of an improved tip and fastening bolt. In the manufacture of loom shuttles it is constituted by means of a flat plate which is variously boint projecting from one side thereof, which be protected to the shuttle body and are sometimed. We have a spen or erly between the threads of the shuttle proportion of the last plate severed to the shuttle proportion of the last plate severed to the end of the shuttle proform means of the spicker which throws the shuttle or magnitude by sometimes secured to the end of the shuttle or magnetic of two pins which project from the plates are sometimes secured to the end of the shuttle or magnetic of two pins which project from the plates are secured to send of the shuttle or trapid movement of the shuttle and the violent rapid movement of the shuttle and the violent rapid movement of the shuttle and the violent rapid movement of the shuttle shuttle is to be also the violent rapid movement of the shuttle shuttle in the violent rapid movement of the shuttle shuttle in the wood or loosen the plates, By peculiar constitution to the latter, and at the same time provide a simple and secure means for holding the same simple and secure means for holding the same time time provide a simple and secure means for holding the same the secure.

#### Bingham Canyon.

Hentors Press:—Bingham canyon, a mining camp with a population of about 1000, is situated at a the D. & R. G. R. R., R., S. miles from Salt Lake & R. Giy.

City.

This camp has seen better times than at the Toly.

This camp has seen better times than at present, but the Yosemite Co. are working a parge force of men and taking out good ore.

Your correspondent visited the Wast mine, two miles from fown. They have a tunnel in 775 feet, and are taking out ore which will average 40 per cent lead, 10 to 15 per cent allver, and worth about \$40 per ton.

The Nast Company, of which Chas. W. Watton is superintendent, are going to start snother tunnel lower down the canyon, and also erect a 10-stamp mill. Bingham is one of also erect a 10-stamp mill. Bingham is one of the best lead campon, and the best lead campon, and best best lead campon in Utah.

Salt Lake, Utah, Oct. Ze, 1887.

OLAYTON AIR - COMPRESSORS IN CALAGON WORK.—In a recent letter from Ool, Geo. S. Work.—In a recent letter from Ool, Geo. S. Work.—In a recent letter from Ool, Geo. S. Workson, C. E., to the Clayton Air-Compressors of the Working of your air-compressors, and just now, as you know, have four No. 4 Clayton Duplex air-compressors in actual work, two at Omaha and two at Kulo." Col. Morrison also used the compressors in actual work, two at Omaha and two at Kulo." Col. Morrison also used the Clayton air-compressors were also used the Bien railway, at Connoil Bluffs, on the Union on the Missouri Valley & Blair railway. The Clayton air-compressors were also used in cais on the Missouri Valley & Blair railway. The Clayton air-compressors were also used in cais on the Missouri Valley & Blair railway. The Clayton air-compressors were also used in cais work at the Arkansas Liver bridge, Lithtle Couplex of a large size at the Harlem River bridge, New York City. There are also three tunnel, Mew York City.

company of early states that the contribution of the contribution

when the confinement and pleased should not a but the velocity of a hard-down, cannot remain so but for a short time. The mines adjacent have an abundance shut-down, cannot remain so but for a short time. The mines adjacent have as about dance of rich ore in eight and but a short time before operations cassed the Manhattan mill shipped \$50,000 worth of bullian. The indebtedness the amount and value of the property. As expressive of the intrinsic ment of the property. As expressive of the intrinsic ment of the property men, would be only too anxious to be permitted to worth in the mines and sake out their mitted to worth in the mines and sake out their as is evident from the activity of the managers as evident from the activity of the managers are evident from the activity of the managers and owners in the matter of adjusting affairs attentions.

ecction.

In the southern extremity of Mye county
there is every symptom of a genuine land boom;
where is every symptom of a genuine land boom;
many hundreds of scree of land have been applied for and taken up, and several parties have
been active in preparing to meet the boom, inordent to the completion of a railroad through
that section from Salt Lake, to connect with
the Southern Pacific. There is hardly a doubt
but what the work of constructing this road will
soon be commenced and pushed through with
vigor.

is of the old-fashioned style and to the smalgamating funes of an actonishing silver ring.

It is certain that Ophir canyon will be soon
better known as Boom canyon, for the recent
greatest encouragement Mye county has received for a series of years. The discovered
ledge is six feet in width and of fabulous richness. Mr. Oliver, superintendent of the Ophir
property, has shown his capacity to handle a
property of such magnitude, and to his auperior
property of such magnitude, and to his auperior
property of such magnitude, and to his superior
ability is Mye county indebted for its present
prosperous indications, for now, no doubt,
prosperous indications, for now, no doubt,
others will imbibe confidence in the merit of the
mines of that section.

Union district, which in years past has produced millions, and about which we have frealiets are daily expected to arrive at lone for
talliets are daily expected to arrive at lone for

tions, an upward movement of the sir, with rain and winds blowing spirally around the conter. Thus, a storm is simply a great eddy center with an increasing pressure in all direcoharacteristics being a low barometer near the

ward. Thus the beromoter near the ascending A storm thus formed continues as long as the outenance of this ontward tend.

A storm thus formed continues as long as a long as the continues as long as the continues as long as the continues as long and we have a fully-developed atom, its

Causes of Rain.

[An address prepared by Lleut. J. E. Maxfeld, U. S. Signal Service, for the meeting of the State

understand the process by which this invisible moisture becomes rain, a knowledge of its natwhich is at all times present in the air. Of course all rain comes from the moisture

are is necessary. If there be a little water introduced into a glass vessel from which the air has been ex-

liquid etate to that of a gas; from visible moist-ure to invisible. If other small quanstantly. Its presence, however, can be detect-ed by the presence it exerts upon the sides of the vessel. It has simply obanged from the hausted, it will seem to disappear almost in-

ficiently, as in the case of the vapor in rain, it is only necessary to cool it sufvapor, and that this vapor may be turned into the form of clouds and eldisivai as es ris edt otai gaisesq si is constantly going on; water from the coerns, rivers, lakes and the earth itself noitsroqave to second sidt evatten ni then requiring considerable time. Now, have evaporated instantly, the process ton bluow beaudoutai retaw edt tadt containing perfectly dry air, the results would have been the same as in the case of the except the more it is cooled, the greater the amount of water. If these experi-ments had been made with a vessel ,bas nisge resqqs of saiged retew ed: If the vessel now be cooled, perature. as invisible state, and that this can are the temlearned that a given space will hold only a certain amount of moisture in andT .seair ernperature rises. Thus assume the gaseous state. If the ves-sel now be heated, the water remaining will gradually evaporate and disappear duced remains as water and does not a time, will seem to disappear like the first, but after a time the water introtities of water be introduced, they, for

this cooling may be brought about.

Air is cooled by mixture with colder There are a number of ways in which the glass vessel,

air, there we find rain, and such a current is believed to exist near the center of all storms, and to be the immediate cause of the formation and waintenance of them. turned to water. Thus, whenever we find a strong ascending current of moist gaied at has been cooled and is being means of an sir-pump, a mist is seen to gather, showing that the invisible ing moist air is rapidly exhausted by sion of air cools it may be seen from the fact, that when a vessel containdiminished pressure, expands, and con-sequently is cooled. That the expansome distance above it. In this case the sir as it rises is brought under ap from near the earth's surface to done only when air is forced or drawn large mass of the air must be suddenly cooled, and it is believed that this is ably never bring about more than thin a clouds, fogs and dew. To give rain, a causes act so gradually that they probair, by contact with the cooler earth, or by simple radiation; but these

consequently circulates around the ascending current with a spiral movement before it reaches the center and ascends. Now, just as a the earth on its axis, is constantly deflected to the right in the Morthern hemisphere. The air in straight lines, but, owing to the rotation of other air is drawn in from all sides toward the ascending current. This does not move inward To supply the place of the ascending air, air at the same level. Consequently the upward movement is thereby strengthened. keep the air in it warmer than the surrounding mation of rain in the ascending current tends to as we have seen, and, if the air be moist enough, rain falls. Now it can be shown that this forthe surrounding sir, it, from these very canses, becomes lighter and rises. In rising it is cooled, surface becomes warmer and more moist than

we say signification as the solution of the second of the solution of the solution of the second of over the ocean being warm and that over the ing air, the conditions are favorable for the birth of a storm. Now, in winter we get just birth of a second contrast to temperature, the air the six that the second is the second to the second the second to the second the second to the sec -banorane adt nadt telom erom bas remraw si ris we have a great many storms some in at that point. Secondly, it has already been stated that whenever over a considerable space the

it is found that all over the globe the frequency of storms increases as we go north from the equator into middle latitudes. As a result of equator into middle latitudes, as a result of that stores occuses, it is found, as already stated, that are not a stores in the state in the state of the state is the state of t

by the name of Dougherty, says the Calaversa Chronicle, was instantly killed by falling down the sheft, a distance of 700 feet. As we understand it, the main shaft was being retimbered, and, as a matter of course, staging was constructed and removed as the work progressed.

Dougherty was standing on the staging, which,

A miner working in the Sheep Ranch mine olean out blast-holes, and it plowed along his thigh and into it for a distance of about 10 inches, inflicting a painful ragged wound.

dropping his weight to the ground, he ran his thigh against an iron scraper which is used to

as he stepped lively from the bucket, slmost

was severely hurt in the winze sunk below the 1300 level in the north drift. He had just been lowered to the bottom of the winze, and

## SCIENTIFIC PROGRESS.

The Independence of Science.

We have before us simply the facts that hat a facts that have presents; our task is to see these in the most rational order possible, knowing well that, however enlarged our knowledge may become, a perfect interpretation of the facts will forever to:

To beyond our reach. Whatever view, therefore, may at any moment best colligate and harving monize the phenomena of the universe, that view—if we are going to concern ourselves with Vivine plans—we must regard as most nearly view—if we are going to concern ourselves with tevesting the Uvine plan. But to allow our interpretation of the phenomena to be overborne and controlled by any a priori conceptions, and controlled by any a priori conceptions, as Mr. Curtis seeks to force upon us, of the Uvine plans and attributes, is simply to abandon so so account and attributes, is simply to abandon so so account and sets the order of the abandon so so and a standard and attributes, is simply to abandon so so account and sets of the abandon so so account and sets of the consecuence and sets of the season of the sets of th

Divine nature and attributes, is simply to aban-don scione don sciones and done scioned and actributes, is simply to aban any deficiem.

Now, to be quite frank, we don't believe that any theologian is one bit better a judge of the any theologian is one bit better a judge of the mancely emperior burnant aculties will work. The merely emperior burnant aculties will work. The child cannot understand the mind of its father, actions. The most stellar own experience, and cannot see the mind of its father actions. The most stellar of the stellar own experience, and cannot see the mind of the father actions. The most stellar of the stellar of the most indeveloped minds to comprehend the workings or appraise more ridioulous, everlaint probling or appraise in the stellar of the most of the most order of the most of the most order of the properties of the distribute petween the most unit of the statucke problem of the father of the most unit of the statucke of season to interpret for us a Suculy, then, it is not without good reason that the leader conditions, or interpret for us a Suculy. They is and that mind which the processing to be conduction that the most unit orided on conducting their vesserches in entire independence of all theological assumptions. Degin to draw deductions from they begin to draw deductions from the neutron being to draw deductions from the science itself becomes a mere aborted appendage seions closes to have scientific validity, and that is not conducting the sucul the science itself becomes a mere aborted appendage to have deductions the science itself becomes a mere aborted appendage stelence itself becomes a mere aborted appendage.

The Uniform Energy of the Sun.

The Unilorm Energy of the Sun, the sun, Tries unilorm Energy of the Sun, the sun has been giving hears the sun has been giving heat are the sun has been giving heat and light to the earth as at present, possibly with some ocusiderable fluctuations, and the sun considerable fluctuations, and the yearth with some not very small progressive variation. The necords of sgriculture, and the natural history of plants and animals within the last 3000 desars, but for all the necessary of the sun's heat and considering that the intensity of the sun's heat of or the sun's heat of the sun's heat there may have been variations of quite as much as 5 or 10 per cent, as we may judge thom one identificating that the intensity of the solar radiation to the earth is 63 per cent greater aguator not in the northern or southern hemitian January blan in July, and neither at the equation to the earth in solutions of any kind. But as for the mere age of the sun, irrespective of the question of uniformity, we have provided by of the question of uniformity, we have provided by sometimity of like on the sarth in time peat for continuity of like on the earth in time peat for continuity of like on the earth in time past for tens of history, with its irrefragable avidence of constinuity of like on the earth in time past for tens of history, and probably for millions of years in the one of the intensity of the or the sarth in time past for the one of the sarth in time past for years in the or the sarth in time past for years in the or the or the past for years in the order of past and probably for millions of years in the past of the order of the sarth in time past for the or the order of past of the order of the sarth in time past for years in the order of the order of past of the order of the order

Here, then, we have a splendid subject for contemplation and research in natural philicaton of dead matter in contemplation and research in natural philicapolpy, or physics, the science of dead matter at the subject of the moder at edimensions which we know it to have, a dedimensions which we know it to have, brounded all around by cold ether, has been done seventy-six thousand million million million million million million million million poster, and as possibly nore, and est possibly for a few million years, and to physicist who is not engaged in trying to answer it can have any other justification, and no physicist who is not engaged in trying to answer it can have any other justification than that his thing to mence science any other million subjects of the physicist of the service of the service of the subjects o

form used for the same purpose as native copper, both for implements and ornament.)

Dr. Andree thinks there is no reason to believe that the tools employed in the great masonry work of Perr, such as the trainmance, were others than those in use in the rest of Peru, which were the champi, a species of bromso. The chiesls found in Peruvian graves soon become burnted when used on the hard strut; but it is suggested that there was some method of sharpening them essily. Indians have certainly worked a hard stone like nephrite with out iron, and there is no improbability, says out iron, and there is no improbability, says were employed.

Were employed,

MEW METHOD OF MELTING IRON,—A new method of melting iron has been devised in Germany. The cupols is supplied with blast blasts, or the other, bene of the other, there is the form of a vertical slat, and are directly with the form of a vertical slat, and are directly connected with a tuyer ring. The particular slath is that the form of a vertical slat, and are directly winch a slath, and are directly connected with a tuyer ring. The particular slath in the form of a vertical slat, and are directly openings, the cupols is that the bottom is a slightly inverted arch, which is the computed sareh, which is the cupols which be the dead of the cupols is that the underly one and the cupols above, the cannot be a seaso fine above the connected downward from the cupols above, the cannot be used by directly charter for diasolving it, or pushed into the bath for diasolving it. Of course, considerable quantities of sorap can be used by directly chartering an ordinary cupols, but it is claimed in this case the advantages to mead by directly chartering and a sused by directly observing it. The state is a sused by directly chartering an ordinary cupols, but it is claimed in this case the advantages put it is claimed in this case the advantages purer description of metal.

To Group of metal.

To Give Green Hardness and Ducklity to red description of makes an alloy which gives great hardness and ducility to red dress, and outsility to red dress, and ducility to red dress, and ducility to red dress, and ducility to red dress, a without having recourse to phosphor drones, a mixture of green bothle glass is recommended to be added to the other metals. To this end a say to a 50-pound or noishe charge, or two per cent, care being exercised to place the whole duantly of the glass is the bottom of the ornoiders, and the two per care, care being exercised to place the whole has a place of the glass at the bottom of the ornoiders, and the top. The drass for bring the other metals are on the top. The case obtained is exceedingly hard, and is not which purpose borings, flings, etc., can be used by which advantage. If the above alloy is to be used for parts of machings, etc., can be used one per cent of machings, etc., can be used one per cent of machings, to be used or getting of manganese should be maken on the proofed. To one per cent of maching hard, and to be used of place grained. Forous castings become almost and close grained. Porous castings become almost any when cast in green sand.

A Weinkle in Horseshoeder. If Gettings are only like a said of the said.

A WEINELE IN HORSESHOEING,—In Germany, the smith, when finishing the shoe, punches hole is cold, he taps in a screw thread, and, when the shoe is cold, he taps in a screw thread, and such such shoes the first of the horse can travel as a sarey-pointed stud of an inch in length, and with shoes thus fitted the horse can travel serews into the worst possible road, and I have never known one slip either when riding or a preventer known one slip pither when riding or diving; and draught horses are shod in the same way. When the horse comes home to as a same way. When the horse can creamage can and serews in a button, so that no damage can papea to the horse, and the serew-holes are prevented from filing. When the horse is good prevented from filing. When the horse is good the horse coming back with horders is no iest of the horse coming back with horders is no iest of the horse coming back with horders have is no lear with a suffice of the horse coming back with horders is no iest of the horse coming back with horders is no iest of the horse coming back with horders is no iest of the horse coming back with horders is no iest of the horse coming back with horders is no iest of the horse or sipping in all directions.

THE BERAKING OF STEEL.—The fact is familist to metallurgists that a steel which is very faithle when cold often breaks at the blue ancestible when cold often breaks at the blue ancestible when cold often breaks at the blue sense in a selfect. It appears to be defect. It appears to be defect, it appears to be considered that the workmen in the Ural pears, however, that the workmen in the Ural pears, however, that the workmen in the Ural has been so often observed the same fact. It has also been found on investigation that the metal in two often observed the same fact. It has also been found on investigation that the metal in would seem to explain a large number of sections would seem to explain a large number of sections would seem to explain a large number of sections of orders, as, for example, the breaking of tires under the action of brakes, and the fracture of under the action of brakes, and the fracture of order orders, as, for example, the bracking of tires orders, as, for example, the bracking of tires orders, as, for example, the bracking of the same bracked as the constant of the section of machine arbors, which become non-dear and of machine arbors, which are measured as a section of machine arbors, which become non-dear and the facture of the arbors, which are commenced as a section of machine arbors, which have measured to be a section of machine arbors, which are arbors, which are a section of machine arbors, and the fracture of machine arbors, and the factor of machine arbors, a

BESSEMER AND COMMON STEEL,—The difference between Bessemer steel and crucible steel in made from between Bessemer elseel is made from bar iron, while crucible steel is made from bar iron, which is first comented in chartence, which are afterward bested and rolled to the size wanted. The cementation in charcoal is done to charge it with the proper amount of carbon.

A New Gas Exerze is being put on the market in England ander the name of the Elland Silent engine. The mechanism is said to be exceedingly simple, the results obtained being excellent. It has an ignition at every revolution, instead of at every two or three revolutions, as in the Otto and other gas engines,

## MECHANIGAL PROGRESS.

Some Questions About Steel,

Some men who have been successful steelavorteint of the decision of the successful steelorder point of the successful steel of the successful stee

Lastly, the remark of the Vermont blacksmith, made last summer, is worth quoting: "When I finew all about steel, I know less now, and am deginning to think I do not know anything!"—Mechanical News.

Leipsic, according to Actury.—Dr. Andree of Leipsic, according to Actury, discussed before a recent meeting of the Anthropological Society of Vienns whether iron was known in America in pre-Columbian times. Meteoric iron was known in America cortainty in use among certain tribes and the Egyquinnax, but Dr. Andree thinks that they are the fact, among others, that the Indians (the art of forganinnax, but Dr. Andree thinks that they are under this conclusion is based on the fact, among others, that the Indians (the art of forgunder wholly unacquainted with the Assistant and employ the Colling the Mexicans and Peruvians) knew how to obtain and employ for iron mines in the history of the civilization of ancient America. The language test so ordinate the history of the particular in general. Moreveston for orivilization of ancient America, The language word "spalligue" as that for iron, but it really word "spalligue" as that for iron, but it really word "spalligue" as that for iron, but it really word to pre-Columbian grees, especially in the received means metal in general. Morevest, of the means metal in general. Moreceilly in the Johnstone of Peruvillization for your serious of Feru and Morthern from have been discovered, although the no facility tom have an easy are found in the Indiana placed their in the Peruvillization for the Columbian grave, here Indiana placed their in the Peruvillization for the Columbian grave, here Indiana placed subjects in their tomber several monade in Ohio by Mr. F. W. Putnam, of the Peabody Museum in Cambridge, both in a metural state and hammered; in the latter

USEFUL PLANTS AND ANIMALS,—Dr. Hook, a Cderman maturalist, finds their the Eastern form sighter affords 269 species of plants and 55 of animals useful to man, while the Western world contributes only 52 of plants and 13 of animals. UTILIZING STUMPS.—In Sweden the etumps and roots of trees remaining after a wood has and roots of trees remaining after a wood has tion of illuminating gas by dry distillation. Other products, such as turpentine, creesots acetic soid and ter, are also obtained. It is respected that this new industry promises to become very important.

TELEPHONIC CONDUCATVITY OF RED. HOT WIRE.—In late English experiments a red-hor wire was made to serve as a telephone transmitter. A fine platinum wire, several inches long, was placed in a circuit with a charged accumulator, and induction coil and a receiving telephone, and when the ourrent had heated the wire, words spoken to the latter were audible in the telephone.

PLUORESCENCE OF BISMUTH.—Engineering to M.—Engineering to M.—Engineering to M.—Engineering to M.—Engineering to M.—Engineering to B. Borbutten, does not horosee in a vacuum when aubmitted to the action of the electric discharge; but when mixed with sulphate of estermic mixed with sulphate of bismuth with aupliates of bismuth with discharge and with carbonate of strontium a blue light and with carbonate of strontium a blue light. With auphate of morescence. M. de Boisbardree an orange fluorescence. M. de Boisbardree and reagents of the laboratory, several of which were reported to be pure.

Mesers, Hurghanson or Hran Into Electricity.

Mesers, Hurghanson & Mernst have devised a most curious experiment from the scientific most curious experiment from the scientific point of view. A thin metalliclest is placed in point of view. A thin metalliclest is placed in tained at uneven temperatures, benefits at emain-covered that a difference of potential is manicovered that a difference of potential is manicovered that a difference of preciable. Moreover, the true, but quite appreciable. Moreover, the direction of the current varies with the lines of direction of the current varies with the lines of of perceip of the magnetic field. They used a piece for in a field of 5000 units. The difference of temmination of the magnetic day placing two pieces of temminations that the magnetic day placing two pieces of of which was secured by placing two pieces of of which was immersed in cold water and the off which was immersed in cold water and the contact where is a difference of the presence of the presence of the presence of the contact was incontact where we decided the cold water and the contact where we have a difference of contact where is a difference of the difference of the contact where we decided the contact where the contact was incontact where we decided the contact where we were contact where we were contact where we were contact where we were well as a difference of the contact where we were contact of the contact where we were contact where we were contact where we were contact when we were contact where we were

Good granife has been found near Raymond, on the Yosemite railroad, and some is being quarried for use in building the steps of the Presno courthouse,

USEFUL INFORMATION,

THIMMING KEROSKUR LAMPS,—Always fill and trim your oil lamps by daylight, and see that there is sufficient wick to reach the bottom of the reservoir. Haise the wick allightly above the stoop of the reservoir. Haise the top of the cone, and cut it evenly to the same shape as the cone, and til evenly to the same shape as the cone, out it evenly to the same shape as the cone, all the other de and discolored portions of the allies of the days and the solesors to remove any particles side with the solesors to remove any particles side with the solesors to remove any particles of the 'trimming'' that may have fallen into of the the other than the solesors to remove any particles of the 'trimming'' that may have fallen into of the bedy of the burner. Keep the top of the wick tube clean by frequently scraping off the balled oil which surrounds it.

ECONOMIZING OLD RAILWAY SLEEPEES,—80 greet has been the scaroity of railway sleepers in many parts of Europe, that various devices have been any parts of Europe, that various devices have been suggested to supply the dedocency. A plan is in vogue in the Netherlands of using a prise of scarolly tail jet that part where the rail rests, leaving a sound length of about three feet in the canter. Two such pieces are therefore tail resting on the channel iron, which thus prevents it from wearing into the sleeper. As these vents it from wearing into the sleeper. As these term more resistance to lateral motion than or-dimensional sections.

LOCKING CANAL BOATS,—The question bas oftenbeen seked, "Which takes the most water to lock, a light boat or a heavy one?" Super to lock in which the water as drawn down to be lock in which the water as drawn down to the lower level and the gates are chosed, the lower level and liled to the upper lovel. The guardness of the lock to contains between the two levels, and the work sontenes of water to the hight of lies center of gravity of water to the hight of lies center of gravity of water to the hight of lies center of gravity of water to the hight of lies center of gravity of water to the hight of lies center of gravity of water to the hight of lies center of gravity of water to the high lies and both will be exact.

In the same, whether there be dosting in the lock a big boat, a little boat, or no boat at all lock a big boat, a little boat, or no boat at all.

OLEANING SHOW WINDOWS.—A good cleaning powder for show windows, which leaves no dirk in the joints, is prepared by moistening calcined magnesis with pure benzine so that a drop form formed aufficiently moist to let a drop form showed in glass bothles with ground stoppers, in order to retain the easily volatile benzine. A little of the mixture is placed on a wad of cotton and applied to the glass plates. It may also be seed applied to the glass plates.

Herecor of Hear on Pianos,—The heat of an fine is very liable to put a piano out of tune. This is not due to the expanding and contracting of the strings, as generally supposed of the diversions produced in the sounding-boards of the air, seposially an tunesce-heated houses. Sounding-boards are made of spruce, because of the superior resonance of the the party of the strings of

A MEW LOCK AND A WEW KEY.—Mr. Dore-mus, a clerk in the Tressury Department at Washington, is said to have invented a new lock which it is thought will be used in post-offices, It is thought while any number of

for wood and material are being given out by the people who propose receiting a smeller is libilaboro.

This would ocratainly indicate that a smeller is to be creeded. W. P. Cowley is own tabling out shipping creeded. W. P. Cowley is own tabling out shipping the bas about 80 feet of work done and the claim out the bas about 80 feet of work done and the claim feet and the claim out with a profit, but could be reduced here and a feet a feet

THE SALMON CREEK MINES.—Bedrock Domocvat, Nov. 22: Mr. L. W. Blasdel, superintendent
of the Salmon creek mines, was in the city yesterday, Muton has been asid herotokree of them by a Calicers and of the recent purchase of them by a Calimoney. The purchase price has been paid over to
morey, The purchase price has been paid over to
mr. Velson, the former owner, and the new company have taken abroulte countrol of the property.

The superintendent is now making arrangements to
more taken abroulte countrol tester
the superintendent is now making arrangements to
woirs, directes, etc., to be in complete readiness for
the opening of next spring's mining season, and
hope to be able to earry on operations on the
most extensive scale ever before attempted in Otegon.

COLORADO.

ODD GUARD.—The new hoisting engine is in place, and the whistle blew yesterday for the first place, and the whistle blew yesterday ior the fit shaft is completed, and drifting will commence next week on three levels. The mill will be completed next month. By everything about this property is in perpendition.

By the Holy of the county of the county is in the county of the county is in the county of the co

We have here the Stamp Mill in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the rapidity (300 strokes each per minute) with which they run. There are 4 shoes in each stamp, so that there are 4300 strokes of the same shoes on the dies per minute. Less power is required than in The Morter mill to do the same amount of work.

The Morter has screens at both ends, giving ample discharge. There are no cams or tappaper of the stamps adjust themselves as the shoes wear.

DOUBLE "ECONOMIC" STAMP MILL

Goes with each Mill. We also have a suitable AUTOMATIC ORE

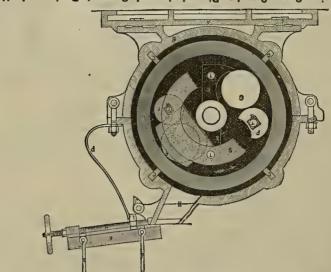

Breaker. ROCK

Several Mills are now in the mines doing excellent work. The "Economic" is not only a mill for small mines, but we believe it is destined to suversede the old stany in mills of the latest caloury.

The Progress of Kansas.

bions of the Great West, bidding high for imto the Republic. The increase of population here has for the past ten years been at the rate of nearly 100,000 per snnnn, and that with the rich mining state of Colorado, and other portion of the rate of the ra sionary labor, and later on the field of deadly conflict between freedom and slavery, should stand to-day one of the most prosperous States to only the trapper and those engaged in misgreatness as Kansas. It seems incredible that a country so recently the border-land of the West, the home of the Indian and interesting rapid advancement in every element of material over this panellet, of more than 100 pages, one is astoniaphed at the progress made by that State in population, wealth and improvements. Though in Statehood 11 years younger, Kansas contains more inhabitants than California; no member of the Union has, in fact, made such replaced the contains the conta Historical Society lies on our table. Looking The Fifth Biennial Report of the Kansas

over her, would be a desirable place of abode to those not apoiled by long residence in Caliwinters and the cyclone that occasionally dances growing; and were it not for her rather cold стевней attention. Kansas contains at least half a dozen large cities, all young and rapidly metals. Thus far agriculture and stock-raising have been the leading industries, though it is probable that mining will hereafter receive inknown to be rich in coal, iron, and lead, with no inconsiderable deposits of the precious term products resching over \$100,000,000, mean teaching of her manufacturing and products, also quite large. As yet submyord mining has been doen does of the State, stong it is been for an indicate the state. and from every quarter. Her property valuations exceed \$400,000,000, the total value of her anivarine mountains are tree from mountains and marsh lands, and lies on several of the great transcontinental highways, attording unwonted statilities for receiving and shipping Ireights to add the mountain and the mountain and the mountains. and even her mining resources consider-able; her climate is favorable; she is tolersoil, her agricultural possibilities being great, migration. But Kansas enjoys many advantages, both natural and acquired. She possesses a rich

## The Better Way.

their differences through recourse to some of their differences through recourse to some of their differences through recourse to she to the present plan of litigation. To us it seems that much might be gained by the set of the present plan of litigation. To us it seems that much might be party to be some that much might be to use to consideration and settlement. It ought to be a very grave interest that would warrant to be a very grave interest that would warrant the anxiety, suncyance and delay attendant on an ordinary lawant. As a rule, better abadon as briting to a trilling claim or suffer a perty wrong than seek redress by taking your case into court, where, it siter much vexatious delay you succeed in getting a favorable vertict, the fees of lawyers and witnessess and the other expenses incidental to the proceeding will, in three cases indicants to the proceeding will, in three cases out of four, more than equal the amount recovered. would not be better to seek an adjustment of Now that Peace Commissions and arbitra-tions are the order of the day, it might be well for the mining community to consider if it

out of four, more than equal the amount irecovered.

Nothing so embitters neighbors as a lawsuit,
Aching so embitters neighbors as a lawsuit,
especially where the amount involved is small,
or the case becomes protected. Men, and often
entire families, have by just such procedure
been made enemies for life; whereas, these hard
feelings, had the matter in issue been left to
referees for settlement, would have speedily disspecial. This latter is not only the most senspecial as as general thing, it proves also the
sible, but, as a general thing, it proves also the
sible, but, as a general thing, it proves also the
sible, but, as a general thing, it proves also the
sible, but, as a general thing, it proves also the
sible, but, as a general thing, it proves also the

VANNING MACHINE. CONCENTRATOR OBE THE FRUE

# "(OO'OGG\$) FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the colebrated "Triumph" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their frames being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built as compactly as their requisite strength will permit, weight less, regardiness of motion when operated. They are built as compactly as their requisite strength will permit, weight less, replaced in front of and which takes the discharge from the feed and amalgam bows. The improvements is in the recently been introduced into their construction, which consists of a Ripper Table.

An important imported to this table by the longitudinal motion of the stake in the reciprosidation which is imparted to the interfedenced and amalgam bows. The improvements is in the reciprosidation of one of united states are table is at the reciprosidation of the land of important in this districts are interfedenced in the single-factor of the state in the interfedence of the efficiency and superiority of this form of Concentrator, and we shall be bleased to send Ortculus evoluting such letters of testinony, and, as well, directions for sections for stopinons, and, as well, directions for sections to quote special prices for any considerable order.

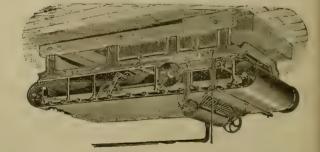

Some and of requisite evoluting such letters of testinony, and, as well, directions for setting up and operating these machines, and are ready to quote special prices for any considerable order.

Some and of requisite sovering and interfered to saved orders.

The principal mines at Georgetown are as follows: The Natiad Queen group was discovered lows: The Natiad Queen group was discovered about 1874 and now belongs to the Mimbres Mining Co. Millions have been taken out of this group. The mines now leased by T. B. Pheaby of California are producing has deadenedy. The ores are free milling, the company having a mill on the Mimbres, working the ores by a mill or the Mimbres, working the ores by a milling and principal and provided the mines are all worked on tribute; the silver ores are oblorides. The commercial, adjoining the Maiad Queen, is about the best mine, just now having the some of our Asitiornia miners. The Parapet Mining by C. O. Smith, who rose from the ranks of or our Asitiornia miners. The Parapet Mining Co., joining the Commercial, is now owned by the lease. The seeping a Do-stamp mill constantly in operation. Several other good mines are worked by the lease. From here to the new samp Viitness of the laster of the mines are worked by the lease. From here to the new camp Viitness is a mineral belt 10 miles in length.

Looks well. The miners are shipping some ore which yields about 32 ounces in silver and 40 per cent lead. A great many of the miners, after doing their assessment work, are now earnp is destined to come to the front as soon camp is destined to come to the front as soon as reduction works are put on the ground. Foley, MacKeen & Co. have struck very rich ore between the new camp and Georgetown, ore between the new camp and Georgetown, dothing has been said about it, but the owners have ore which they claim will run 2000 ounces. The New Camp

The Santa Ritta copper mines are aix miles from Georgetown. These famous mines were from Georgetown. These famous mines were garbening Mexico with its copper coinage. They were closed by the hostlity of the Apaches in Mexico with a few opened with any system. They have been opened with any system. The mines in 1882 were bought by Jerome B. The mines in 1882 were bounded a large cash capital for developing them. The Santa Lita copper mines were once considered the richest capital for developing them. The Santa Lita copper mines were once considered the richest in the world, but now the camp is almost described with the company did not seem to be succepted. MINES MOT FOUND, BUT MADE.—Mining in Manes of peatoreurs, and Cunnison county is as yet in its infancy, and those people who were impatient to see bonser years ago without any effort on the part of man years ago without any effort on the part of man will see some very rich mines yet developed. Experience has tonch from the part once are not found, but made. It is true that once in great while very rich mine, but the great made, of the search of jority of rich mines to-day are the result of stilled labor guided by experienced men, which before any return is given, It is a mistaken before any return is given, It is a mistaken before any return is given, It is a mistaken hid mine will he be other hand, we arroth mine will he be other hand, we contend that one never learns too munch and contend that one never learns too much about minning,—Eik Mountain Pilot. Santa Rita.

THE DAVY MINERS' LAMP,—It is a shock to all our youthful prejudices, but it is need out of all our youthful prejudices, but it is endoubtered and self y a face, that the Bavy hamp no longer tignes among the safety apparatus of our mines, point. An alteration made in the bill when it point. An alteration made in the bill when it was before the House of Lords left us doubtful was before the House of Lords left us doubtful demned, but Mr. A. H. Stokes, a Government the Obesterfield and Midland Counties Institute the Chesterfield and Midland Counties Institute the computer of the lamp that the lamp is doormed. At the same meeting the fairt prate was bear to examine the workings for gas; but, as the to examine the mines will constity of air feet names in a number only candles have less by the fact that the lamp is accounted the miners walk and the conticute of the considence that explosions have been been of the miner will consequence of the addensity it is explained rate of the miners walk and allowed the conticute of the miner will consequence of the bary lamp. The discovery is useful, but it is a case of good by to another illusion.—

sucher; a station has been cut over the shatt state or and are been calified 250 feet 590 feet in the station as been cut over the shatt been such each of the station or out out is 20x32 feet, 28 feet and a been piaced as steam boilst which dump fibe as been piaced as steam boilst which dump fibe as been piaced as steam boilst which dump fibe as the control of the tunnel and steam is carried in mouth of the tunnel and steam is carried in the station of the tunnel and steam is carried in the country protected pipes. Ample buildings for the country protected, and everything gotten ready for starts at a some colose for the present. All of this work was done or came to close down long's mouth of the country at an office, when word came to close down for the present. All of this work was done or the present. All of this work was done to the present. All of this work was done to the present, besides laying in 780 cords of the present. All of this work was done walse of three improvements amounts to about a samples 120 conces aliver and strain the town of the compartment of the search of ore which assays 110 conces aliver and strain the core, and are down on the compartment wind be conformed to be only temporary. At the bone of the control of the search of the conces aliver and \$3.4 conces aliver and sto found on the past about \$300,000 according to wind deep. The mine has two veins on the above, wind the past about \$300,000 according to the need to make a profitable in very mine as proved on the past about \$300,000 according to the need to make a profitable in very wind the past about \$300,000 according to the need to make a profitable in very worked down deep. The man are aliver and \$4.5 conces aliver and \$3.4 conces alive

There is so much in this Yankee Fork country.

There is so much in this Yankee Fork country to commend it that some day it must become a good mining district. Wood and waster are good mining district. Wood and waster stated and nonly isolation and long winters are the real obstacles to development. People trun off to more inaccessible camps because they are new and required richer than they are, while here the country is only slightly prostroid and good mines such as I have described are in the bands of men needing more are in the bands of men men described are in the bands of men men eating for capital to work them, or are waiting for capital to the them off their heads. This is a good country and should attract more attention. A Fine Mining Country.

and their wild eyes blaxing with anger, movered to the words of an agitated sees in the content of a forest, Bandered desperate by the contents of the fear, they pressed resolutely covered. Hand been killed; but they were now neglected by their companions, who evidently thought that human flesh and that of which companions, who evidently thought that human flesh and that of the words are to intentify the companions. However, the mole more desirable. For every one that they were sure of their triumph. By instinct, they comprehended it. The amel to book had intentify they were sure of their triumph. By instinct, they comprehended it. The areal of blood had where the danger was greatest. He had where the danger was greatest. He had intentify of the outsel, so rapidly did be more from the extensity of the correit to the other. Whenever these hydrophoirs days, they coung man flew to bis success, the seemed to have multiplied in their blood at his feet. Horrible lies thoughter; their blood at his teek. Horrible slaughter; their blood at his each morn dew to slaughter; their blood at his each word on the word and her to the or their blood at his each flew to be seen that and the word was an actor, as a ferman, but in several. Legions to the man had a several. Legions were attacking the palisade, Human skill and very and success the seasemblage of parts. A second was the action and were attacking the palisade. Human skill and very and the surgestime were attacking the palisade. Human skill and the start of the surface was an actor.

Two Mew Vecerater Perrumes are said to have lately become articles of commerce. One of these is a kind of xylopia from the province of Chirigui, in Costs. Rices. The odor closely resembles that of Canaga advanta, and the flow the meantiscture of ylang-ylang. The other lately and of sther plant, in the meantiscture of ylang-ylang. The other plant, in amed owco, and is the highly odoriferous blosmom of a kind of sacais tree which is found in the standard was the Central Africa, and which Serpa Pinta was the Gentral Africa, and which Serpa Pinta was the down the Cubangin river for saie. They cover the trees on which they grow with such profusion that they flow they grow with such over the trees on which they grow with such over the trees on which they grow with such over the trees on which they grow with the

New Solder for Telegraph Wires.—A new and rapid method of soldering these wires now and rapid method of soldering these wires has recently been introduced and is now to be be already and replained to the saving of time required vantage consists in the saving of time required for the work and in the avoidance of any for the work and in the avoidance of any duce the strength of the wire. The two ends of the wire already embraced by binding of the wire already embraced by binding to one standard the strength of the wire and of the wire and of the strength of the wire selected by or which there is sufficient powdered saltoned, however third salt. The ends of the wire pressed into this quickly joined, however dirty they may be are quickly joined, however dirty they may be.

A DAMGEROUS INVENTOR.—A Russian lieutenand I DAMGEROUS INVENTOR.—A Bussian lieutenant to engineers has perfected an apparatus for infercepting telegraph and telephone messages in time of war. The apparatus is contained in a small oblong box and weighs rather less in fast three pounds. The telegraphic receiver is of the recording type, and a battery for returning the recording type, and a battery for returning the messages to the enemy forms part of the quipment. An invention of the nature above described cannot fail to be dangerous in the hands of unserrupulous persons.

## Scientific Progress.

Paychic. The Three Forces—Physical, Vital and

NUMBER IS.]

In the Azalma and other Bessel.

In the Azalma and other diplomiferze, though true societies, most of the individuals cannot separate themselves without the danger of seath, and usually they so co-ordinate their movements that the colony may perform certain acts; for instance, the caramen (Physales) of the Fortuguess men-of-war frequently change their course, and then all the individuals of the colony concur in the act. We have here a unit trom the Psychic points of view; they have a unit which controls them—a will which decides for them by what Perrier calls a kind of social conwince the controls them—a will which decides for the second controls them—a will which decides for the second controls them—a will which decides for the second controls them.

The Hydras and Medures, living free, are sufficient to represent the second considered as a sufficient to represent the considered as they are sufficient to represent the second considered as a sufficient to represent the second considered as a sufficient to represent the second considered as a strength and the second constant and

UNDERGROUND CARLES,—Detroit has three underground cables, each 1900 feet in length, for the use of the fire department. They are asserted work perfectly. This experiment seems to prove that there is no serious difficulty in placing electric wires and estimate.

USEFUL INFORMATION,

Orontehone Losing Electrity.—Very elastic esoutchoue tabing gradually loses some of its elasticity. Later, the tubes break on its elasticity. Later, the tubes break on stretching, even if previously laid in warm water, and finally they crack if pressed between the flow formation of sulphuric soid by the action of moist air or the sulphur contained in the caoutchouc. By frequent washing with slightly alkaline water, the sction of the soid is prevented. Tubes washed five or six times a year vented. Tubes washed five or six times a year meaning of perfectly elastic.

rope-making had been acquired, so that it must be cleased among the oldest of the arts. The carking the anoing the process of must showing the process of manufacture practiced more than 4000 years ago, while the oldest records of the process of t

directly if the water is warm, and indirectly in a rescitonary way if it is oold, wates it up to it is oold, wates it up periatals of the slimentary tract, wates it up periatals of the slimentary tract, wates it up and water when the circulation, either local or old water when the circulation, either local or old water when the circulation, either local or old or young, age, nor in the feeble as to coal troubles, like nor thouse it is esten in local troubles, like obtained to great in local troubles, like of the coal or old or young, of salt is very beneficial. Such a time-honored coals of the coal could only have been so persistently advected to because of it laving been found by bered to be the most appropriate time, or persistently advected to because of it laving been found by bered to be the most appropriate time, or persistently and the coals of the sactory what warm or bot water, with the eadlition of a labt, does, and more, in that it is the coal of or and a salt does, and more, in that it is not the addition of a salt, does, and more, in that it is not not and savites and according to a neutritive and excites the slow of gastric juice." The Chinese Coning with Bereaters.

Even the conservative Chinese appear to be appear to date, The regular Chinese troops are being armed with a repeats. In principle it is very similar to the Lee, the boils action and magaratheatheath below the breech being unmistrates attachment below the breech being unmistrated attachment below the troop articles is small, and the rifle is sighted to 600 yards.

Grass is a bad conductor of heat, yet the plates used are so thin as to oppose but a very slight barrier to its escape; on the other hand, it is an excellent absorber and radiator—so that, in fact, it permits the escape of heat almost as readily as plates of iron of equal thickness. The loss of heat in winter by single windows is enormous.

DELTA METAL STONAL ROPES —Signal ropes for mines in Europe are made of delta metal, for the reason that this metal strongly resiste corrosion from sulphur-impregnated weter of the injures. The metal of which the ropes are made is said to have a tensile strength of more than 50 tons per square inch of section.

PRIVIED matter may be copied on any paper of an absorbent nature by dampening the surface with a wet solution of society of press. Old pressing it in an ordinary copying press. Old writing may also be copied on uneased paper, if wet with solution of sulphate of iron mixed with a simple solution of sulphate of iron mixed with a simple solution of sulphate surface.

A RAZOR STROPPING MACHINE.—We must give honor to whom honor is due, and it is apparent that the inventive Yankee has been outcase to the fine inventive Yankee has invented a dane tor one. An Englishman has invented a tracor-stropping machine. You put your dull resor into a rest prepared for it, turn a crank, and the thing is done.

PETROLEUM UNDER BOILERS.—Bassis takes the lead in utilizing petroleum for steam boilers. It is reported that thore are in use in that country as many as 50 different types of appa-ratus to burn petroleum under boilers.

A very large number of adults form the babt of eleopurg in one particular position, and babt of eleopurg in one particular position, such as lebep upon the back. "Some obedens sleep upon the back." Some obedens it is flaced upon the back. "Some open the sleep with the back of eleopurg in one particular position, such others can only aleay the head greatly ackended; more offere one it is flaced considerably upon the truck. Watership of the based very low. Some observations made by Dr. G. Mosovitch of the control of the based very low. Some observations made by Dr. G. Mosovitch of the based very low. workings of this mine are in vein matter.

CHOLLAR.—The mil will not start until after the electric works are up and furnish light. This will reselv in the coming week. The mill itself is ready to start so stamps any moment.

OEST.—This mine is looking well and yielding its cent gold per ton. It would keep a ro-stamp mill running steadily.

HAYWOOD.—Are sinking in the winze, stoping above the tunnel and driving the tunnel. The recent gold per ton whose improves as depth is attained.

PARDORA.—Are sinking the shaft from the 50-foot workings. It will be sun!; to a depth of about soo leet, when drifts will be run in the vein. All the workings of this mine are in vein matter. Chot, a Land will will not established the after the start until after the

a portion of it.

CROWN POINT,—The goo-level south drift from the shalt has been cleaned 35 feet aince last report, and it now has about 80 feet turther to go before it will be where they will commence to crossout, Its total length is now 300 feet.

BROWN AND LECRUITS,—This mine keeps all the astatras on the Carson river tunning, and could keep a to-stamp null, if it only had one. The ore west drift on the Carson river tunning, and could keep a to-stamp null, if it only had one. The ore west drift on the Carson river tuning from the main gest drift on the 50 level.

BULLION,—The southwest drift from the main total distance, 130 feet; The stand stand attained a feet, and distance, 130 feet.

The main south drift was advanced 25 feet; total distance, 230 feet, 130 fee

machinety, at a considerable reduction using the horsting machinety, at a considerable reduction in the tand monthly expenses.

HALE MUD MORGEOSS.—On the top of level have started Mo, 4 exat crosscut from the face of the being in quartz giving low assays. The last 12 feet from the bottom of the winze on the 1350 level has going from the bottom of the winze on the 1350 level has going except.

UTAH,—On the 472 level exat crosscut Mo 6 beet cold length, 455 feet.

UTAH,—On the 472 level exat crosscut Mo 6 durit and the wall at the west wall of the velta.

UTAH,—On the 472 level exat crosscut Mo 6 durit and cap.

The crosscut has cut into the west wall of the velta.

ALTA.—The mill is now running night and day, from the card of the crosscut have advanced a north and at the mechinety is running night and day, and all the machinety is running night and day.

ALTA.—The mill is now running night and day, and all the machinety is running nightly and the ballety of the sating on the ross of 150 or on the 232 level is advanced a total distance of 150 or the capitage of 150 or the capitage of 150 or on the 234 level is advanced a total distance of 150 or the capitage of 150 or on the 250 levels.

The shalt is impected down 150 feet.

ALTHA AND EXCHIGUER.—West crosscut No. 1 or the capitage or the cold divise on the capitage or the cold caston irro feet. The now in soo feet, and the south drift is in 30 feet.

The shalt is impected down 150 feet as a level and 150 levels.

The shalt have the consecut have a consider the last of or one on the one of 150 or one of

Canyon. This connection, besides answering for an the capte from the shalt and as a drain tunnel from the mine, will enable them to prospect the ground to a depth of 300 feet without using the hoising machinery, at a considerable reduction in the monthly expenses.

Here we will be a supplementation of the considerable reduction in the monthly expenses.

MATURAL GAS STRIKE,—Georgetown Courter, Mov. 20. A by gathle of neutral gas was made in Melon. A of the Florence Oil Refining Company in Melon. So the Britan of Melon. So the Melon of Melon. Melon.

AN IMPORTANT STRIKE - Silver State, Mov. 16: George feets and their, Died, who returned from Kye Ealth feets and their Judy, as a very important strike has been made by W. T. Hales in the Reno mine. A large board of high-grade ore has been cut in the lunnel, and excitement tunns high among those owning claims in the vicinity. The mines is owned by Reno men, who commenced to develop it a short lime ago.

## Rye Patch District.

Biossom, aided by Eastern capitalists. In order to long, and why such valuable property abould lie idle so long, I was informed that over half a million dollars had been expended on the surface for the ratioad, he mills on of water, before a single pound of one was curbed. Now, however, nexotations are pending through which the whole country will be opened up.

THE GEORGETOWN STRIKE.—Cor. Southwest/Sem-tived, Nov. 16: Having visited a new strike four to five miles south of this place frequently of late, I will give you some items of interest. In the first will give you some items of interest. In the first camp, as the ore is not only exceedingly rich but it lies in streaks and deposits in the silutian lime and on the contacts between the lime and porphyry dikes

## NEA WEXICO.

regularity.

(Grante: —Phillipsburg Math, Nov. 17: Everything it are not of stockient glade and tentate of production thing is running smoothly and the rate of production continues the same. The output for last week was some continues the same. The output for last week was 871 oz. silver.

Hope: —The mine and mill continue to produce their regular amount.

GEORGETOWA AND CARLE DISTRICT. — The main shalt too feet deeper, was started up again shout the middle of last month and is now running. Pyrenees mill, which was shut down to sink the Pyrenees mill, which was shut down to sink the heart too feet deeper, was started up again main shalt too feet deeper, was started up again from the point to about so days. The Georgetown Conition of the started works on the second run after a cleaning thom the being on the second run after a cleaning thom the bond to Messra. Wattenweiler & Brainnober, is now young idle again, the negotiations undertaken by hond to Messra. Wattenweiler & Brainnober, is now these gentlemen having been killed by the alien law, these gentlemen paving been killed by the alien law, these gentlemen paving been killed by the alien law.

In 1885.

The POORMAN.—Inter-Mountain, Nov. 14: B.

C. Kingsbury yesterday received from Supt. Clark
of the Poorman mire some obsering information in
regard to that valuable property. The face of the
middle tunned, where the ore had been squeezed for
a few feet, has opened out a wider ore body than
ever, with an increasing proportion of the coarseever, with an increasing proportion of the coarsegrained galents, assaying 570 in silver and 70 per
cont lead. The face of the lower tunnel is being
cont lead. The face of the lower tunnel is being
driven all in ore of excellent grade and remarkable
regularity.

AROUND PHILLIPSBURG,—Phillipsburg Mail. The miners and prospectors of the district surroundaring Phillipsburg are less willing to suspend operations during the coming winter than they ever have tions during the coming winter than they ever have as more of an interruption than ever before. Many of the small veins and prospects are in just such of the small veins and prospects are in just such will commence upon them, and the activity through will commence upon them, and the activity through the winter can continue. With this state of through the winter can continue. With this state of through the winter can continue. With this state of the winter can continue. With this state of the control of the sample of

## .ANATHOM

M'CALLUM MOTES.—Elikenburgh Capital, Nov. 14: Mr. McCallum, who is keeping store at McCallum, was in the city yesterday. He reports great ceitivity in the placer to this distruct and asys consider estable gold is being faken out. His store is in the center of thate the mans creek and the center of thate for await, Williams creek and the ceives over his country, and in the course of trade he receives over his country, and in the course of trade he repulsed more development this year than for several years more development this year than for several years once development this year than for several years more development this year than for several years of the indications are that there will be a pact, and the placer mires. In the past lew weeks the placer mires. In the past lew weeks to county has been a lively flurty in iron mines, and the county has been a located for miles around. Twelve me placer ilocations have also made, and the man and the me with the placer incations have also been a located for miles around. Twelve

We have here the Stamp Mill in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the rapidity (300 strokes each per minute) which which they run. There are 4 shoes in each stamp, so that there are 4500 strokes of the shoes on the dies per minute, Less power is required than in that their mill to do the same smount of work.

The Mortar has screens at both ends, giving ample discharge. There are no cams or tappeets to wear or he adjusted. The stamps adjust themselves as the shoes wear.

DOABLE "ECONOMIC" STAMP MILL

AUTOMATIC ORE FEEDER

Goes with each Mill. We also have a suitable

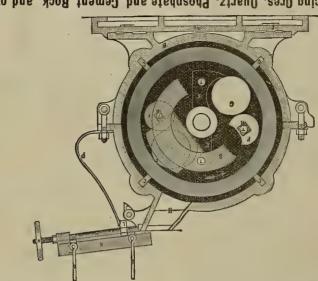

Several Mills are now in the mines doing excellent work. The "Economic" is not only a mill for small mines, but we believe it is destined to superseder the old stamp in mills or the Breaker.

We will not too often the statute of or soon of the paper to any one who does not not have a latter and the paper to any one who does not not have a latter and the statute of statute

## The Arizona Gold Mine.

ure the yield of a whole vein on the basis stamps, the rock does not now sversge much over \$6 to \$7 per ton. So it will not do to figmine is still ranning and paying, working 80 rock came from the surface of this mine, one of the largest nurgets ever found here having been picked up in the canyon. But though the Buttes of California. It is true some very rich is richer than any he ever saw, mentioning at the same time, as a means of comparison, sev-eral other mines which have produced rich rock. Among them he refers to the Sierra should be reserved to pay the national debt. The Prescott Courier speaks of the new mines in glowing terms, and the editor says the rock there was some idea in Congress that the mines has been applied to many other mines which showed rich surface ore. It may be remembered that when California was first discovered torial and Mational debts is not a new one, as it however, of this being a very rich mine, though the idea of its being able to pay Terrifor the whole ore body. There is little doubt, rich gold rock are so very deceptive when se a basis afraid to repeat, more especially as assays of been made, and the assay values quoted we are Two men have pounded out several thousand dollars in gold in a few days. Wonderful estimates of the mine have The richest gold quartz ever found in Arianos and Englands for a discovered in the formation of the season of the season of the formation of t

sincerely hope the new ledge will turn out all that is expected, and that more of a similar character will be found in the violatity.

The ledge is from 8 to 78 more and 25 m mine is found to pay best in the long run. We so very large and lasting. Miners in these days rather prefer a good ledge of regular rock without much "specimen ore." This kind of pocket, such as we have had many instances of in this State. These pockets and chimneys are good, but in gold-mines they are not generally and "paying Mational debt" are rather caloulated to impress mining men unfavorably than the other way. It looks too much like a Arizina in any way. But statements about "many tons of rock worth \$75,000 per ton," rich croppings. This is not said to belittle the new find in

count or depression in price of product. rather than silver, copper or lead. They get what the gold is worth, and suffer from no dissibilities there, and miners are looking for gold settract more attention to the gold-mining pos mate to the ledge already discovered. Whether the rich pocket holds out well or not, the dis-covery is a good thing for Arizona, as it will region very thoroughly to try and find the presents every appearance of continuing. Good offers for the property have already been refused. Of course prospectors will scour that

## Encouragement to Mining.

works. Both these things have stimulated prospecting and development work among the guilqmas to tnemdsildstee edt bna beorlier boring sections is owing to the advent of the ments in gold and silver ores near Prescott, on Lynch creek, Big Bug and Hassayampa creeks, They agree that the activity in all the neigh-The Arizona mining community seems to have become "enthused" over recent develop-

ing matters in a general way. Mot only are new mines being found, but very large ship-ments of ores are being made to the smelters in meeting, the dovernor of the Territory pre-siding, and discussed the project of taking united action to further develop the mineral resources of the region. The Three Dimensions were refere-

"The Cueva del Oristo."

The Three Dimensions Were Enlarging

For about an hour Manuel had been trying to tracks, but at a short distance he lost them and tracke, but at a short distance he lost them and was obliged to stop. Hunger and thirst, excited was obliged to stop. Hunger and thirst, excited The hours were slowly slipping by. The darkness to could not be more dense. The solemn silence shriet of some bat, that with its hong wings was somethings but the that disagreeable the immense tomb, as Victor Hugo would the immense tomb, as Victor Hugo would the immense tomp, as victor Hugo would the immense tomp, as Victor Hugo would the immense tomp, as levent mournful monor, water continued salling with mournful monor, of the superiority shat third in the serent manner; step by sele, but solemn, seerent manner; step by sele, but solemn, seerent manner; step by sele, the solemn, late abyes which had devent in a was in this enormous crypt. Sunister concess, was in this enormous crypt. Sunister concest and in the sund placid brow, has I know not what of sign of the abyes which had elected me for anything. I was something. Manuelolem of a gant, in the sund of the sund of mournful that abyes which had elected me for its and a sund in the sund of the sund o Seligman, economical in the reduction of sulphides and refractory ores in general, and that the sincky nature of ores does not increase the cost of treatment as it does with lead smelters.

Revival of an Old Mining Camp.

hese sein stirred with such life and vigor during hese seins and the pioneer days of that seethon, the peast few months that brief and vigor during with sheir much larger populations, bayed with months that be bade. The busy with their sears, the wastly loaded with lumber, meaniner, beans, searly loaded with lumber, meaniner, beans, searly loaded with lumber, meaniner, search and the lively reports which his growing camp, have prompted that paper to send a related out can be seld, in order to obtain a relieve samp have prompted that a paper to send a related out can be seld, in order to obtain a relieve samp have, be seld, in order to obtain a relieve camp, large and the field, in order to obtain a relieve samp have be seld at the candon of the candon of the sender of the sender of the sender of the candon of the candon of the candon of the sender of the sender of the candon of the can want of capital and the application of modern and coientific improvements in machinery, was Pine Mountain, an old mining camp, which, for In a southerly direction, 33 miles from the town of Enreka, Nev., and situated at the head of Sammill Canyon, on the west side of White

has been stirred with such life and vigor during neglected in the pioneer days of that section,

As seen from the Pine Mountship, As seen from the head of the canyon, running north and south, rises gradually from its base, but further up the ascent is rugged and steep, towering to a tremendous hight in grandent that can hardly be described. The formation of the canyon is a dyke of porphyty, the footwall the canyon is a dyke of porphyty, the footwall the canyon is a dyke of porphyty, the footwall the canyon is a dyke of porphyty, the footwall the canyon is a dyke of porphyty, the footwall for the mines, which forms one of the spure of the canyon, as well as everything in the canyon, textion, as well as everything in the canyon, whose hear absorbed by Mr. Robinson, whose textion, as well as everything in the canyon, whom mines and mining in Eastern Mevada are taminist than by those who do not understand whom mines and mining in Eastern Mevada are taken in the contraint of the meter and water rights, is obvious to all, as one of the necession, and the spure of securing times to all, as one of the necessary adjuncts to a large mining property.

White Pine Mountain,

The Principal Mines

( To be Continued.)

Developing mines,

The Denver Tvibune-Kepublican says: The Denver Tvibune-Kepublican says: The manager or superintendent of a property in process of transition from a prospect to a mine process of transition from a prospect to a mine property is at a loss which form of a different of greape. It is no easy mach to lay out the developments of an embryotic mine so that every part of the underground work will serve the greatest purpose when the property has eventually been developed, and property has eventually been developed, and still leave it free from seeming unnecessary work and consequent expense. A prospecting still leave it free from seeming unnecessary diff of dimensions that will prove acceptable for a working seems that will prove acceptable for a working seems and observed the same is true of the regularity through. The same is true of the regularity through. The same is true of the regularity ore body opened up in securate, square, or ore body opened up in securate, square, or note body opened up in securate, square, or ore body opened up in securate, square, or tectargular blocks, provided the openings successing and course or elevation of levels. A mine or ore body opened up in securate, square, or tectargular blocks, provided the openings successing in the secures and loss if used to see the orestored in the points, presents a model ore bodies at practical that shows one on all sides, its better than one took.

Took the decision of levels is only the transit and disclosing only barren for the secure of a diording the paretical shows one on all sides, is one only barrent one. In most instance, or one of seed of the seed only barrent one of the seed of the stance of the seed of the stance of the seed of the seed of the seed of the secure of the seed of the seed of the seed of the seed of the secure of the seed of the se

rock.

In most instances, however, a happy medium rock.

In most instances, however, a happy medium should be available, affording the practical grainstaining of an ore body, and still maintaining the firequiarity in the course and elevation of levels. A system of work that will bring within of a mine, and not leave the impression that of a mine, and not leave the impression that the ore bodies and not leave the impression that years, system or regularity. Prettily and adventure and state of comparagness, system or regularity. Prettily and adventure has a system or regularity. Prettily and adventure has a without any distinct and be a wise as ere are. In large papers and the same are the large considered and immession or ore bodies, and as a wise as trace. In large lists are the first and square has to be laid saide and the differ the first diriven to where the ore exists. This is particularly true of mines that is asside and the dirits diriven to where the ore exists. This is particularly true of mines that saide and the dirits diriven to most one except of the only limit that can discuss the should always be large enough to allow a miner ample room to work treely. A man cannot work accomined to the early diritous work accessfully in a cramped position, without room to swing hammer or pick, and a most work accessfully in a cramped position, as a miserable little hole that has bas to be entered the original pays he is a miserable little in the degraded manner of a same a miserable little in the degraded manner of a sure of the contered as a miserable little in the degraded meaner of a series as miserable little in the degraded meaner of a series of the original as a miserable little in the degraded meaner of a series of the original as a miserable little in the degraded meaner of a series of the original and a series of the original and a series of the original and as a miserable little with the series of the original as a miserable little with the series of the original and a series of the original and a serie

The canelle water the caree, ve week watering switch. The cave, to me, appeared to be endless, dismal and horrible. The cave, to me, appeared to be endless, dismal and horrible. The cave, to a speaked to be endless, dismal and horrible as the deader. If he can lead to be ender he and in the mean time was diminishing. If do not here, "We onght to be near the door," said here," In fact the loathsome vespertillos were germinating. So little was now left to the can germinating. So little was now left to the can germinating. So little was now left to the can germinating. So little was now left to the can germinating. So little was now left to the can little was now left to the can letter, the dame died out. I drew forth some wax tapers, and holding one, and the can letter the can letter the same of the same dead out. I have the same to the same of the last nesource for salvation. With the expanse of getting out vanished, and with the expanse of the from fatigue. "I am the midst of a supple of the order of the midst of the say it without a light, it was not from the fatigue." I said in a be midst of the most one that the same and the significant of terror; but in the standard the saying a seison of terror; but in that night of darkness, estion of terror; but in that night of darkness, estion of terror; but in that night of darkness, estion of terror; but in the same and measured nies of the doors of water and the secured of the doors of water and the secured of the stage of the monotone and measured and searced and the searced and searced and searced and searced and searced aneaded and searced and searced and searced and searced and searced

A cold swest broke from the roots of my holds of my holds of my bair. To retrace the passage in which three candles had been expended, with only one, was more than difficult; it was almost impossible.

"You told me you brought a handful I Un youro sox sistes, shor amo." [A handful I Un seven, massler, shor und." [A handful I mure even, massler, shor moi, "A honght of the voice, and suiting the action to the word mine; then in a high voice, and suiting the action to the word mine in the word; "Backward, backward; and in a hurry, or we shall be buried alive; "I began to go back the same way rapidly. Manuel followed me, saying: "I was the store way rapidly. Manuel followed me, saying: "I was the sir should not consume it so the soot back the same of the candle with my hand so that the sir should not consume it so quicking the fash of the dame of the candle with my hand discouraing nor meditating. It was not discouraing nor meditating. It was earning me to hasten on. To get out, to discouraing nor meditating. It was to the soil by our steps, I was not the sair should make in the soil by our seley. It was the opposes of the conty idea, To get out, to was causing me to have to lay, that hind me with a struction on. To get out, to breach on the with a struction of the orderine was walking to use yearding in order not to be detained a single garding. We were well and the with a struction of the detained a single sarding. In order not to be detained a single in the sulfar was diare-walking her was diare-walking her walking gailing swiftly.

But with days of the sulfar the consume of the sulfar the consume of the sulfar and the sulfar and order and longer the consumer. We were sulfar and order and to be detained a single of the contrance all O be detained a single order walking and of the sulfar and order and was diare-walking and O be detained a single order walking all O be detained as single and the sulfar and the

".omA tonic ,asst, ent stat."

But with Equal Celerity

The Three Dimensions Were Enlictging was penetrated, were visible. Again we stopped in an estonishing manner, and an hour afterward distinct the root nor the walls of the care were visible. Again we stopped in an ocean of darkness. "What are you doing?" I saked darkness. "What are you doing?" I saked Mannel, seeing him unloses a cord and take out the sling to get the size of it." Turning his right a little stone from his pures. "I am going his gives the sling to get the size of it." Turning his right the sling the stone, which went whizzing in a direction almost vertical. I listened attentively, but did not hear the stone strike against the root. Soon atterward it fell near us. The altitude and the stop his stop has a strike and discharged it in a lateral course against the companion has been the stop of the subjustion of darkness that surrounded us. In the meaning we were greated that the sling any shock. This indicated that the dimensions were proceed as the find out the stop of the care any shock. This indicated that the dimensions were introneasing out; we can follow our tracks." And in tact that any shock. This indicated that the dimensions were increasing the equal proportion. Some any shock. This indicated that the dimensions were increasing the equal proportion. Some any shock. This have been very late, because he said. "Here meaning heave on the first another candle," I said, and lighting it, the first another candle," I said, and lighting it, the first trom the root, producing a metallic sound which baying been walking two hours and a half and blorstion? Orbit canded in the department to the caver was falling the exploring a metallic sound which right exploration? Orbit and help with the stand of the cavern. We had been walking two hours and a half a believed to be battled. When the caver was the caye, of the caver was the substance of the caver.

The Poistade show become vot interesting with offerest mythology the Pleiades were the seven daughters of Akies and Pleione. Their history varies writing on the A B C of astronomy, not daughwith therent mythologists, and as we are writing on the A B C of astronomy, not dreck into tit. STEAM AND EXHAUST PIPES.—It is recommended that all pipes, steam, exhaust and discharge, be made as straight as possible, but always of ample area. Keep the steam-end well onled. The exhaust should have an area double the steam-pipe. The pump should be firmly secured on a rock or masonay foundation, and mail cases be easily accessible for use. REAL DOLLARS.—Colonel Robert G. Ingersoll says: "I have been told that during the war we had plenty of money. I never saw it. I lived years without seeing a dollar. I saw promises for dollars, but not dollars, and the coin back of it. You cannot make a paper dollar without a dollar worth of paper. We must have the paper dollar worth of paper. We must have paper that represents money. I want it issued by the Covernment, and I want behind every one of these dollars either a gold or silver dollar, so that every greenback under the flag can lift up its lead and awear, 'I know that ny redeement its head and swear, 'I know that my redeement liveth."

It does not reduce an alkaline copper solution, but, like glycerine, liberates boracic soid from borax, the latter salt disconsioning ascobarin readily in aqueous solution, due no donbt to a displacement of the boracic soid from borax, the latter salt disconsioning acceptarin readily in aqueous solution, due no donbt to a displacement of the boracic soid from borax, the latter solution, acid.

Telephonic Connection Between Ships,

Edward D. Graville, F. C. S., in the course of a series of notes on seconarin, says:

The sample to which the first supply that are peepled to the first sample to which the first supply that have for the first supply that the sample of the wide difference I have seen the countries. It is the first supply that the sample of the wide difference I have seen the countries. It is the sumple to expend the sample of the wide difference I have seen the supply of the sample of the wide difference I have seen the supply of the sample of the wide difference I have seen the sample of the wide difference I have seen the supply of the sample of the wide difference I have seen the sumple to supply of the potential article, and the sample of the wide difference I have seen the supply of the supple of the wide difference I have seen the supple of the wide difference I have seen the supple of the wide difference I have seen the supple of the wide difference I have seen the supple of the wide difference I have seen the supple of the wide difference I have seen the supple of the wide At the recent meeting of the American Association for the Advancement of School 
Science has always benefited by aktention to the control of the co

ment. The axies are tested under a heavy triptammer, three blows in succession being the bammer, three blows in succession being the audjocked to this test. The inspector is required to witness every blow. On the occasion ed to witness every blow. On the occasion was called saids, and much a being the fair occasion was called saids, and upon his returns the third blow was given, when the exte broke. This surprised every one, as there had been no break. Then the operator began to think the same heat. Then the operator began to think the matter over, and inably he decided to make a trist when the said broke. Again and again was the and the axis broke. Again and again was the attempt made with invariably the same result, there were no breaks. The facts suggests ome atthere were no breaks. The facts suggests some there were no breaks. The facts suggests one peculiar changes in the conditions of the steel while the axies are enforced not to call the inspector away while the axies are undergeneous of the product of the inspector away while the axies are undergone of the product of the inspector away while the axies are undergone of the product of th

## Night-Work in Machine Shops.

After a great deal of discussion on the subject of night-work, asys a cotemporary, employers have not resched any uniform conclusion,
apparently because they have allowed their deaires to bias all their observations. Night-work,
or that which has to be performed by lamplight,
or that which has to be performed by lamplight,
or that which has to be performed by lamplight,
do good work by any light which has yet been
used for the purpose of shop illuminstion.
beto say that such work is not as good in quality as that done by daylight. How great a
falling off there is likely to be, any one may
falling off there is likely to be, any one may
metal work in the evening, and again in the
metal work in the evening, and again in the
daytime.

The following to do any little delicate piece of deep by trying to do any little delicate piece of deep by trying to do any little delicate piece of deep dyvime.

The following conclusions may be set down as facts, having been deduced from a long experience: Might-work does not pay for the say work done at night-is not satisfactory in quality of work done at light-in that that that done by daylight. The quantity of work done at let lighted done after lamps are lighted quantity of work done after lamps are lighted different as compared with what the end of the daylight. The facts place all the same. Might any little coning of in the daylight work, the same shift on the daylight work as compared with what the same shifts coming to in the daylight work as compared with what the same shifts only on the daylight of the mark. Whiter and annumer the men could do in the daylight work and not the dayle work and not the light up in the winter months, but close when it shows the contracter was made, it was the nabit not to have a scoonne daylight and and not only saved the captain in December, January and Rebrary exceeded the contracter was made, it was the manner the men fook and for nine hours' work, the early close and found that he had not only saved the except by year. At the end of the year the manger of not between daylight on the man december. The number of men, observed the except of old and little in wulker.

To or even full time in wulker.

# FIVE HUNDRED AND FIFTY DOLLARS

San Francisco, C

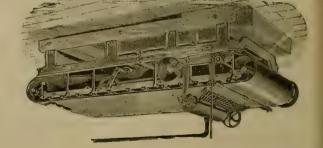

"(00°0gg\$)

The present improved form of the colebrated "Triumfff" Ore Concentrator possesses many advantages over any other style of Varmers, Varning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their cost of tron, insures their solidity, durability, and perfect dure of motion when operated. They are built as compactly as their requisits estength will permit, weigh less, respect in motion when operated. They are built as compactly as their requisits estength will permit, weigh less, replaced in front of and which takes the discharge from the feed and smalgam bowl. The improvement has recently been introduced and smalgam bowl. The improvement is in the rectiprocal in front of and which takes the discharge from the feed and smalgam bowl. The improvement is in the rectiprocal in front of and which takes the discharge from the feed and smalgam bowl. The improvement is in the rectiprocal in front of and which takes the discharge from the feed and smalgam bowl. Attempts the condense of the best of the best of timber the best of timber resources of the belt. The best of timber resources of the belt. The best of the best of the best made by Mr. John Dolbeer and submitted to Col, E. S. Williamson, United States Engineer Corps, in 1880—certainly States Engineer Corps, in 1880—tertainly many of the prominent mill-owners slong the coast, which entitles it to consideration. This coast, which each end of the prominent will-owner show the second of the prominent will owner the second of the condense as of the condense as follows:

The Lumber Resource.

Redwood Resources.

one resources of the countries above named, which consistents the object redwood belts of California; no cleaved of timber would, in most parts of the object redwood belts of timber would, in most parts of the belts of timber would, in most parts of the total times of the consistent ince times the best lates consistent was most about the streams, always taking when the ceeding along the streams, always taking when the ceeding was most according as each operation. The streams along the consistent of the ceeding when the streams are consistent of the ceeding when the streams are consistent of the ceeding when the streams of the ceeding when the ceeding we will be served to the ceeding of the ceeding which along the belt have not been insignificant, may worked over were embraced in or totally excepting an exaggeration of an understatement of the index drom the belt have not been insignificant, may be indexed by the distance from which parts along the best camps are 39 miles from which the attack of the miles of man to often transported to the mills.

The Mendocino Lumber Company's advanced the Michael ly water had along the Albino mill draws its logs 19 miles, of water logging camps are 39 miles from which had shown as tretches.

The Mendocino Lumber description of time spring only the most promessed the stretches, and the highs of the rings of times of times of times ports. Belt of or supplies of the supports on the like split materials of the supports on the like split maters beet destruction with his into waste, who had along the tree entire waste, it its grain proved refractory or its texture the feet mills of the miles of the supports of the constitute the chief redwood belt of California.

Del Morte, Humboldt, Mendocino and 80-noma Counties.

We condente from the Ukiah City Press the following account of the lumber yield and pres-ent resources of the counties above named, which constitute the other redword pets of California.

ried as follows: Gold, \$58,188,953; silver, Sof,481,811.

The silver dollar coinage was 29,433,342.

Standard ounces, at a cost of \$25,986,981.

The silver dollar coinage was 29,433,342.

"Aumber of silver dollars made was 33,266,821.

Silver dollars to the amount of 10,901,922 were distributed from the mitse during the year and distributed from the mitse during the year and 10,500,000 transferred to the Treasury.

Tunnber of trade dollars redeemed by the Act to September 4, 1887, was 7,689,036. The Treasury from the date of the passage of the random of the Act to September 4, 1887, was 7,689,036. The Act to September 4, 1887, was 7,689,036. The Act to September 4, 1887, was 830,561, The Trade of the passage of the passage of the passage of the cope of the passage of the cope of the passage of the folder of the total standard assage of the cope of the passage of \$5,842,819, and the total expenditures of the mitse and assay offices dollars.

The sume of the gold and silver bars issued from the United States and olders of the passage of the mitsed standard spin, for use in the industrial arts during the year, was \$81, 189, 509.

York and the Mint at Phriladelpina, for use in the industrial arts during the year, was \$81, 189, 509, and \$85,71,825.

The since of the gold sud \$4,471,646 silver.

S95,710 gold and \$4,471,646 silver.

STOREY COUNTY MINES.—The assessor's abstract statement of the bullion product of mines abstract statement of the bullion product of mines and virgin is shown filed with the county during the only one it concludes.

Sulforing and Virginis is the only one it concentring as the other ore-producing mines on the concentring as the other ore-producing mines on the collibration and Virginis statement reads as lack of a lack of careing prover, due to the the chone statement reads as lack of such the Careon river. The Consolidated California and Virginis attement reads as follows:

Tokal number of tone 50.25 55; gross Vield or value, \$584,614.99; oost of extraction, \$21,924, value, \$584,614.99; oost of statement reads as follows:

yield, \$183,661.24; tax, \$5489.75. The gross vield, \$181,468.006; total cost, \$255,745. The gross of one of the decete safely transport transport.

S21,82 per ton. Lack of the preceding quarter, anding Julion product of ore extracted was average bullion product to ore extracted was average bullion product to ore extracted was was the cause of the decrease in the bullion product transport of ore extracted was product from the mines in the bullion product from stempting facilities were the cause of the decrease in the bullion force or extracted was the cause of the decrease in the bullion ground than the mines in the total bullion product from the mines in the solid bullion product from the mines in the total bullion product from the mines in the gors. Both below that ended June 30, 1837, was 1,072,902.80.

In addition to the coinage executed during the year, gold and silver bars were manufact-nred as follows: Gold, \$55,188,953; silver, \$6,481,611.

the value of the gold and silver received at the mints and assay offices during the fiscal year the mints and assay offices during the fiscal year since 1881.

Worm-Forms.

Great flaxibility is given to this type by its form, which is more pighty onaditioned than form, which is more pighty conditioned that any two-axed form, when the extremities, one being in contact with the ground and the other dittons. We noticed a tendency in the compare types to lengthen; in the worm types there pact types to lengthen; in the worm type there their protective covering, the other to retrograde and become slow of movement. Thus requiring a shelly or horny armor for their protection, and become slow of movement. Thus requiring a shelly or horny armor for their protection, and become slow of movement. Thus requiring a shelly or horny armor for their protection, and become slow of movement, articulated worms. Segmented forms appear to have originally. The segmente in the higher genera are so speciallized that they now exist but as organic parts of a single snimal.

(To be Continued.)

#### Racts About Lightning.

Every one is familiar with the fact that lighting does not spring direct from cloud to cloud
to the earth, but pursues a zig-zag course,
This is due to the fact that the air is not equalthe path which offers least resistance to its passage. Damp air is a better conducting medium
then thy numid throughout. Electricity always takes
the path which offers least resistance to its passage. Damp air is a better conducting medium
than dry air; consequently, the lightning
selects the dampest route, avoiding the drier
strets and cones it encounters, and advances,
the opposite cloud, where it subdivides into a

To Break Open Large Preces of Cast Irons.—Drill a hole in the part to be broken, as you can in the part to be broken, it a steel plug fairly tight to the hole, then plug the hole is of with water, and insert the plug and drive down hard with a heavy sledge; it will do the business every time.—Ex. MEW DEVICE FOR FILING.—A new idea is that of an Eoglish mechanic who, in the English Backenic, shows a device for filing flat surfaces "tearly and quickly." It consists of a framework fixed on the bench behind the vise, and by means of which a small wooden roller is pressed upon the file over the center

The results indicate that the strength of iron increases uniformly up to 500 degrees Fahr., while the ductility diminishes up to soout 300 degrees Fahr. It then increases until a somewhat higher temperature is reached, and then 500 degrees. Steel, subjected to a temperature of 500 degrees. Steel, subjected to a temperature of 500 degrees, but at this point its ductility was reduced to the steel of steels.

MECHANIGAL PROGRESS.

The Development of Steel.

Many deciring the standard of the American Many deciries as follows: The remaining the same found of the American Many deciries as follows: The remaining place in the production and more general adoption of steel production and more general adoption of steel arrow was recently very prominently referred to by Sir Charles Sir Charles Palmer, M. P., of the great Jarrow Shipbuilding and Iron Company. Sir Charles Shipbuilding and Iron Company. Sir Charles chested to impress the the the theory and in the deciring the steel was of a series of their calculations, and they could searchy settimate to what it." The introduction of a material giving a castent she hippured from the introduction of a material giving a higher arrength and greater safety, and flow might look forward to the sime when steel might look forward to the sime when steel build ships, and not only abide they would be the only material of which they would be the only material of which they would similar constructions. The Reduced Cost of Steel Production

The Reduced Cost of Steel Production Was greatly to be simed at, and when it was remembered how enormously the cost of turning out pig from had of late years been reduced, further economy in steel production might be alcemed a certainty. I may remark here that already we are promised a new afteel puddling furnace for which most remarkable results are bisimed. This durance the inventors, Messre, tons of mild steel in eight hours, with three tons of mild steel in eight hours, with three mean to the working of the furnace, on eight hours per shift, "at a cost much below any cost per ton ever made." It will, they boast, meet all the requirements to making any kind of iron or steel for shipbuilding, boiler-making, and iron or steel for shipbuilding, boiler-making, and likewise iron for chair, also gun iron.

and likewise iron for chain, slso gun iron.

Cost of Manutacturing Iron and Steel Reduced 30 Per Com.

Among the other claims of the inventors, it is said that the away turnace will be shown to produce 21 tons of iron or steel in 24 hours, at a marvelously small cost. There is a great save ing in manual labor, and the utmost concommy ingular labor, and the total cost of working ing in manual labor, and the total cost of working the patent process, including cost of pig iron, ingular, cost, labor for working turnace, appears, os all contracts, on the incention and including the process, general changes, etc., and allowing for wear of mach allowing for wear of mach charactery, can, the inventors assert, be made 30 per cent cheaper than any other working for made 30 per cent cheaper than any other order of process working st the present time. The steel process working down one of the patent furnaces is wery small.

The March of Steel.

The growing adoption of steel.

The growing adoption of steel is very apparent when comparison is made between the ourent but when comparison is made between the ourent bi-mouthly returns of the associated massisted material states of a few years ago.

Eugland, and the returns of a few years ago.

Eugland, and the returns of a few years ago.

Eugland, and the returns of 50,000 few to a see see of 50,000 per ton, but now the rate of production has fallen ton; but now the rate of production has fallen average price as low as \$22.75 per ton.

Therefore is as low as \$22.75 per ton.

Therefore is as low as \$22.75 per ton.

Two-Thirds Reduction in Four Years.

Since 1883 the production of iron by the associated makers has declined nearly two-thirds, and should this rate of declenation continue, a total extinction of the iron tracks is incretized. This condition may be fully grasped by comparing an average bi-monthly return of 1883 with the return just issued. They are as follows:

2017 Railes 220 Railes

edt at leest ot nori mora egnand edT ed anstament eroM Total. Total. Total and To

When it is remembered that in 1883 the price of iron plates was as high as \$32, and they are now down to \$22,75; while the fall in the price of angles has been nearly as complete.

NEW METHOD OF FORGING IRON AND STEEL.

Decours Agnue — North San Juan Timer, Dec. 2:
Discours Agnue.—North San Juan Timer, Dec. 2:
Business called us to French Corrisl last Monday.
We found the place almost as dull as it is at North
San Juan. The closing down of the Milton mine
threw almost every man in that once thiving town
out of employment. It is enough to drive men distracted to bave their homes made desolate by an unrighteous decree forbidding the working of all
righteous decree forbidding the working of all
righteous decree forbidding the working of all
rested to bave their Dydandic process. The inhabitants of French Corrisl, Sweetland and Birchville
are sadly discouraged.

Placen.

to separate the gold from the quartz, and be was rewarded by getting gold from the quartz, and he was rewarded by getting gold for which he obtained 570.

In a little while thereafter, Thos. Daily, a 15-year-cadam from the waste dump of the same mine, and do doing he realized 4,0 from his discussory. The old dump has been culled over for many years, but those doing has been culled over for many years, but those doing has been culled over for a many years, but those doing has been culled over for a many years, but those doing has been culled over for a many years, but those doing has been called over for many years, but those doing has been called over for many years, but those doing has been called over for many years, but those doing has a many fire searchers and the character of the total of the character of

waenoe uterrior.

Con. Cal. Va.—Enterprist, Dec. 3: Good headway has been made during the week in the several
duits and winzes on the 1300 and 1400 levels. On
the 1435 level the west drift from the bottom of the
winze sunk below west crosscut Mo. 2: is in highriess has been made in the several drifts and
winzes. The one assays will average about the same
sa last week, and about the usual quantity has been
spisch week, and about the usual quantity has been
shipped to the several mills. Washoe District.

## MEVADA.

RAIN.—Tuolumme Independent, Dec. 3: The rain bas encouraged a hope of renewed propertly in cycyty branch of business, miners and farmers being especially joylul of expected results. The new co-stamp mill on Black Oak mine, at Soulsbyville, started up on Wednesday. It is expected that this started up on Wednesday, It is expected that this mine will come to the front yery shortly.

pay. Under-Sheriff Tompkins has some very rich pays. And you were advanged to the Education of quarts from the Quarts Hill mine, Scott Bar.

Looking Well.—Journal, Dec. 3: It is reported that the Bead working on very rich ore; the chick the Linde Gem in the Deadwood district from the Ghson from a seam to 18 inches in width and is seen taken from it, the ore goes about \$\$\frac{1}{2}\$\$ Some result of the ton.

TATUM & BOWEN,

Several Mills are now in the mines doing excellent work. The "Economic" is not only a mill for small mines, but we believe it is destined to supersede the old stamp in mills of the language.

Goes with each Mill. We also have a suitable

We have here the Stamp Mill in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the rate pidity (300 strokes each per minute) which they run. There are 4 shoes in each stamp, so that there are 4300 strokes of the shoes on the dies per minute. Less power is required than in any other mill to do the same smount of work.

The Mortar has screens at both ends, giving ample discharge. There are no cams or tappets to wear or be adjusted. The stamps adjust themselves as the shoes wear.

STEEL CASTINGS.—There is no doubt that steel castings are daily finding new markets engineers we find that a very large number point out as an inducement to buyers that appears in the casting parts of their machines are now made of cast asteel. In all perusasion, we find the castings are made of steels wore the week we had the perusasion and the casting are made of billty of wrunght iron and east steel when used as arms to pulverize minerals. The arms made of wrunght iron atoed with steels. The named of twought iron steed with steels. The arms made of wrunght iron steed with steels. The arms made of wrunght iron steed with steels. The arms made of wrunght iron steed with steels. The sum of the unionists was strong, and steels wore out much of dismemberment,—Boston showed least sign of dismemberment,—Boston Journal of Commerce. Ingenious Inprovement in the Manutracture of the observing in the manufacture of tin casa for preserving food is being introduced, the plan consisting food is being introduced, the plan consisting food is being introduced, the plan consisting presend on, and the can is hermetically scaled, presend on, and the can is hermetically scaled, water boiled in a fin thus closed has failed to force it off, although the steam pressure has burst the can itself. A penny piece, however, formed around the top of the cover, with the formed around the top of the cover, with the formed around the top of the cover, with the formed around the top of the cover, with the the can as a fulcrum, raises the lid formed around the top of the cover, with the the can be cover, with the shoulds of the can as a fulcrum, raises the lid formed around the top of the cover, with the her one of the tin on with the lid fits is formed at a very slight is made at a corresponding angle, no older being made at a corresponding angle, no older being used to form the joint, By means of this is made at a corresponding sngle, no older being undered a remarkably clean, quick and simple operation, contrasting greatly in these respects operation, contrasting greatly in these respects in vogue.

Colorand O commerce.

Colorand Colore may be communicated that II different colore may be communicated to well-cleaned copper, and eight to nickelt well-cleaned copper, and eight to nickelt colore may be communicated to well-cleaned copper, and eight to fixed add, 500 grains; water, one quart. After the cellistion and the metal is afterward immersed therein. At first a gray color is obtained, and their and encessively to maroon, red, etc., and finally to blue, which is the last color. As out for such and ancessively to maroon, red, etc., and ancessively to maroon, red, etc., and finally to blue, which is the last color. As consultance and stances that enter into the composition of the solution cost very little, the process is a clean one. It is especially applicable in the manufacture of buttons.

STEAM VS. WATER POWER.—The cost of steamer power in small amounts is greater than a steam-power in small amounts is greater than in large amounts, but for mills requiring 500-borse power or more as economical results can more beobtsined which steam as with water, in almost every case. To this add the advantage of the every case. To this add the advantage of this may mean, also consider the better results this may mean, also consider the better results this may mean, also consider the better results as why this estatement is practically proved at the land we can plainly the statement is practically proved at the consider why this estatement is practically proved at the land with a statement is practically proved at the land with a statement is practically proved at the land with a statement is practically proved at the land with a state of the land with other mills can enconsequently of the land with other mills drives by water-power.

Glass and Mancaness in Brass Oastings.—
(Glass and Mancaness in Brass Oastings)

It is said that two per cent by weight of finely pounded bottle glass, placed at the being melted for castings, gives great hardness and at the same time ductility to the metal. Porous cast ings are said to be almost an impossibility when this is done, and the product is likely to be of great service in parts of machinery subject when this is done, and the product is likely to be strength an impossibility to strain. An addition of one per cent of oxide of machinery subject of strain, and disting of one per cent of oxide and of seamhers and disting in the lating an objection.

Berlin Castrings.—The superiority and delitation of the products of the Berlin founders is accounted for in a great measure by the fact accounted for in a great measure by the fact state for the founder's purposes. These sands are found in the brown coal formation or in the Slettin and other places.

Slettin and other places.

The standard is successfully were the street successfully and the successfully and the successfully and the successfully are successfully and the successfully and the successfully are successfully as the section of the power used or the successfully.

THE LARGEST ELECTRIC LIGHT IN

Would have been placed in the Sydney (Australia) lighthouse. It has a power of 180,000 candles, and may be seen from ships 50 miles out at seas. The next largest is the Palais d'Industrie, and has a power of 150,000 candles. The largest light in America is 24,000 candles. The largest light in America is 24,000 candles.

WORK OF MATURE'S SCULTOR. We are accousing the water accousing the water account of the water

Rainfall at Sacramento.

It is also a somewhat singular fact that Penn-sylvania potroleum, which was the first to be developed, is superior to any that has been developed elsewhere. Compared with the oils produced in Northwestern Ohio, Canada or Reussia, the Pennsylvania article is far superior. This also suggests the facts that Pennsylvania roles and oas have the early is and it is doubting to the court in the object of the decident to the Cornwall, while as to the uproariousness of her grantly, while as to the uproariousness of her grantly is done of the cornwalls, while as to the uproariousness of her grantle of the cornwalls, while as to the uproariousness of her grantle of the cornwalls, while as to the uproariousness of her grantle of the cornwalls, while as to the uproariousness of her grantle of the cornwalls, while as to the uproariousness of her grantle of the cornwalls, while as the uproariousness of her grantle of the cornwalls, while as the uproariousness of her grantle of the order of the order of the cornwalls, while as the upper order of the order or

TO TAKE THE "SMELL" FROM BLANKETS.—
Will you us kind enough to let us know it there
is anything that will take the smell out of a
woolen blanket after it is finished? We are
worken some all-wool blankets and use lard oil,
which leaves a smell after it. If there is anything that will take it out, will you kindly inform us?

OAST-IRON PULLEYS may be lagged with least-leave the use of rivets, by first brushing over the surface with scotic soid, which will quickly rust it sand give a rough surface; when attach the leasther to the face of the pulley with composed of one pound of fish glue and one-half pound of common glue.

Los Anderres.—It is said that the full name of Los Angeles is Pueblo de la Rejna de los Angeles, which means, in English, Town of the Queen of Angels. A Grass Brozrend des dess made at a Bir-miegdam, England, tactory for a Calcutta mill-ionaire. It is of solid glass, the legs, rails, etc., being richly cut. The King of Burmah also das

"GAS HAMERS" are being introduced into England, and it seems are making considerable beadway in competition with the steam ham-mer.

"The Krely Moror," still drage its slow length along. It is eaid that efforts are being made to "to on" it in England.

## GOOD MEALTH,

Monntain-Olimbing Healthful.

The Value of Pure Air.

The Value of Industriang and invigorating and invigorating attentioning, its well recognized, yet it would seem took to be superfluous to examine a little more closely this most precious of remedies, which, by the residence in a healthful locality, by the relief it gives from the earse of business, combined with residence in a healthful locality, a control of pure air, and drinking of pure water, sately leads to a serie of business of pure water, and drinking of pure water, and drinking of pure air, and drinking of pure water, and drinking of pure water, and drinking of pure air, and drinking of pure water, leads to a performance of the condent of pure water, and drinking of pure air, and drinking of pure air, and drinking to professes and sleep the call in the dark.

According to Professors Sennetor and Fluegge, but as the classes of an ender innoctory conding to professor and research to be seen to soil can render innoctory pure at its able, probably by means regards the disease germs received into the old—the windows in almost over the oxygen of combrastion, to render more or less innocuble to the disease germs received into the blood—of combrastion, to render more or less innocuble to the disease germs received into the blood—of the west of combrastion, to render more or less innocuble. A lavorite experiment of ming the less of serving in the distance of saw any but favorable one from which I never saw any of cours and drink the windows in almost every none in my lead of the west diseases at distance of saw any but favorable one from which I never saw any in the same of condenses of one to my of cours of cours of cours of cours of cours of cours was, in the every precartion was observed to prevent and every precartion was one exposed. The Value of Pure Air.

way.

Way.

Te is wall known that not every one exposed to way.

Ye is way.

Ye is way.

Ye is a contagious disease acquires that disease, and may it not be that disease, and may it to to be that those escape entirely or suffer from a mild form of the disease, who, after exposure, spend a consideration the incomplex that the denser of contagion depends also somewhat upon the position that the very consideration the couples when at the such heart of pure air. It is of somewhat upon the position that the visitor occupies when at the subsect of pure air. It is of especial efficacy in elevated regions, and its confirmer accents, and the heart secents, and its he puts forth in the accent. The best incomplex secents, and the confirmer secents, and the best account. The best incomplex secents, and the puts forth in the accent. The best incomplex secents, and the confirmer are of the peat and restion the best secents of the feat and of muscular tone, especially fact of the heart and vessels; if the confirmer are of vitiality and other organs in the giands and other organs does not yield to an increased flow of blood in

Jan.
Jan. We present the tabular etatement of rainfall at Sacramento for the hat 38 years. It is very valuable, not merely to those who live in the great valley of California, but a le silve the general athders of meteorology, as it affords the means of comparing the rainfalls in the interior and upon the coast as recorded in this city. We are nucler obligations to Sergeant Barwick of the U. S. Signal Service for his kindness in furnishing revised figures to date.

BLINDWESS INCREASING.—It is stated on good authority that binduces in the United States is increasing. While the population during the ten years from 1870 to 1880 increased at the rate of 30 per cent, blindness increased over 140 per cent. FINGER-WAILS AND TEMPERANEUT.—The fingernails, like every other part of the physical
organization, possess temperamental evidences.
Their length, breadth, thickness, toughness,
constitutional properties. The coarse type of
the motive has strong, somewhat irregular

A COMMON AFFECTION.—Not infrequently nurses, by reason of negleco or ignorance, fail to wash the heads of infants properly during the wash the heads of infants properly during the wash the heads of infants properly during the which should have been removed goes on accumulating, dust and dirt are intermingled, it grows discolored and thicker. It eventually the name is not a cruet, which interferes with the natural action of the oild parties, and nurse according in the consent of the soilor is decomposed. This ablaced secretion is it their product by the action of the secret of the disease known as conservable in the consent in washing, new-born children is the consent in washing new-born children is the consent in the consent in washing new-born children is followed by very troublesome results.

HEART DISEASE AND INDIGERTION,—There is it is doubt of the truth of the statement of a New York physician that half the cases of so and a fact disease are only indigeablen, and make a tree scared to death than die any other way. Dyspepsis causes a pine in the other tree in a resease the part of these that he heart be the tree in the tree to give up tea, outlets of these things—sat however head and a present of the care of the case of

Poisoning by Alcohol.—Cases of poisoning by alcohol, which prove fatal, most commonly occur among children, on whom it seeks as a powerful natrobite. The symptoms are brief, but wild—excitement, then stupor, delinium and profound insensibility, which not infrequently terminates in desth. For treatment, it should be held in the bread placed under a fancet or mans and the bread placed under a fancet or pump, and a douching of cold water be persistent and the bread placed with a persistent of mustard or ipecae should be given, and followed by the aromatic spirit of amonia and followed by the aromatic spirit of amonia in doses adjusted to the age of the child. It a physician is not called, the druggiet from whom the amonia is obtained will advise them whom the amonia is obtained will advise what quantity to give.

Skiin Diskass.—The laity believe, as a rule, that cutants.—The laity believe, as a rule, that cutancous diseases result from "blod", blod," the impurities of which find exit through the skin, and in so doing take the thin come of an eruption. Obsequently it is harmful to remove them. Obsequently it is harmful to sealers our of a disease of the sealer cut of a disease of the sealer of the obsequence, in their opinion, might be diseastoned by the "drive out" and internal organ. Mother, could be more absurd, for it is absorbantly in the sense to either "drive into "or "drive out" are sind incease. The blood incease as peonitar to this organ as to any other, entirely localized, depending upon other, entirely localized, entirely entirely localized entirely entir

does not rest and veine; if the thinded blood does not become thicker and more rich in albumen; if the accountabring carbonic soid is not soid a not become thicker and more repelled by a more plential apply of cyggen; if the let deposited in the body is not cyggen; if the let deposited in the body is not more repidly oxidized; and if the let deposited is the body is not repelled to coroning to Jacobi. Join, Olerla and other authorities, Loin, Olerla and other authorities, Loin, Olerla and other authorities, not more generally by mount-more certainly and more generally by mount-in the certainly and more generally by mounties, Loin, Olerla and other authorities, in many other way whetever, it is necessary to have a very bing arranged and it is necessary to have a very bing arranged and the otherin preliminary defails. Hegulation to the established as to the gradual increase in the extent of the daily ascents, the protection of the established as to the gradual increase in the extent of the daily ascents, the protection of the fertain and a fine formation of the protection of the reed, legs and nates against the protection of the formation of the necessary defails and the formation of bisters, the protection of the neces, legs and nates against the mountain up which the selection of the mountain up which the selection of the neces, and finelly the selection of the mountain up which the secent is to be made of the formation which we have the consideration.—L. DOUBLE "ECONOMIC" STAMP MILL.

We have here the Scamp Mell in a cute, pand stuppe form. The bigh diop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the rapidity (300 strokes each per minute) with which they run. There are 4 shoes in each stamp, so that there are 4500 strokes of the shoes on the dies per minute. Less power is required than in that there are 4500 strokes of the smoont of work.

The Mortar has screens at both ends, giving ample discharge. There are no cams or tappped to wear or be adjusted. The stamps adjust themselves as the shoes wear.

AN AUTOMATIC ORE FEEDER

Goes with each Mill. We also have a suitable

Several Mills are now in the mines doing excellent work. The "Economic" is not only a mill for small mines, but we believe it is destined to supersent the old stand in mills of the table.

# Mining Share Market. COMBINED STEAM TRACTION HEADER AND COMBINED STEAM TRACTION HEADER NO. THRASHER.—George S. Berry, Visslia. No. 374,539. Dated Dec. 6, 1887. This is one of the control of t

STAYSAIL HANK.—Johan O. Wikiman, Educke, Humboldt Co. No. 374,530. Dated Dec. 6, 1887. This is an improved staysail harb, conseising of a section having one end halved with a staple projecting from said halved halved with a staple projecting from said halved to the lower part of the inst section, and have and solvest of the inst section, and said staple as typ formed on the first ecciton, and a cord passing through said scape, whereby the sections are secured. By this construction it is easy to remove the staple, whereby the sections are secured. By this construction it is easy to remove the stay said whenever it is not needed, instead of bread or cap, and it can be easily replaced at any bead or cap, and it can be easily replaced at any time in the same manner.

STAYSAIL HANK, -Johan O. 'Wikman, Eu-

Quinn and Samuel Crossley, Deggett, San Ber.

1857. The danyer eignal is automatic. It, 1857. The danyer eignal is automatic. It consists of signals or lights situated at a sufficient of danger, since of signals or lights situated at a sufficient distance either side of a point of danger, and connected by wires with suitable weight or stonathig mechanism which will serve to distant the signal to the engineer of an approach. The device is approached the play the signal to the engineer of an approach at the point. The device is specially nacin or bridges or culverts rendering portions of the road invisible from the approaching train. It is also visible from the approaching train. It is also visible from the approaching train. It is also blaces.

FOR WEEK ENDING DECEMBER 6, 1887. From the official report of U. S. Patents in Dewny & Co.'s Patent Office Library, 220 Market St., S. E. Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

Inventors,

List of U. S. Patents for Pacific Coast

worthy of special mention:

There are several large mines on the Gomestock which are now producing paying ore, and as a result the stock market does not seem dependent on the news from any one mine. Still the state of the market is not very strong, and fluctuations are not great. The Virginia Extery fore any that the minorance of the work forces, but alone by the Savage Hale & Vorcross, Chollar, Portes, Jacket, Orown Piont, Belongh they done by the Savage Hale & Vorcross, Chollar, Portes, Jacket, Orown Piont, Belongh they define the manner and developing their mines on their not viridends and developing their mines on their own resources, is difficult to overseit.

The series of the product of the product of the mines above to develop the product of the produ There are several large mines on the Comstock

SAN FRANCISCO, CAL. Room 7, No. 109 California Street,

\*(00°0gg\$) FIVE HUNDRED AND FIFTY DOLLARS

The present improved form of the colebrated "Triumph" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their trames being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built trames being of iron, insures their solidity, durability, and perfect steadiness of motion when operated. They are built as compactly as their requisits strength will permit, weigh less, regular less freight space in boxes, by which their cost of transportation is reduced, and occupy less mill room when set up, his miportant improvement has recently been introduced into their construction, which consists of a kirwick Tank, placed in front of and which takes the discharge from the feed and amalgam bowl. The improvements is in the reciprocal motion which is imparted to this take in the reciprocal motion which is imparted to this take in the sample of the sample of the state of the sample

MECHANIGAL PROGRESS.

Soda Engines—The Philosophy of Their

The following appears in Wood and Iron, a technical paper published in Minneapolis, in Minneapolis, and be of sods in the following appears in Mood and Mood and Iron, concerning the streets are published in Minneapolis are beinger in that tity.

Some of our cotemporaries are publishing as are being run on the streets of Minneapolis because the law forbids the area of ateas are periments were made with a so-called sods engines.

During last winter and early spring some experiments were made with a so-called sods engines. These sods engines were work manual and the sods engine are triply a stranger of more than 250,000 in a viring strain out of difficulties. These sods engines were about the sold of the sods and worse workmanthy. And worse workmanthy.

The sod to make the failure was due to the triple of the sods of sods, but to poor management, bad designs, and worse workmanthly.

The strain and worse workmanthly.

Strain and worse workmanthly.

The strain and has the property of condensing the steam itself. The strain and worse workmanthly.

The strain and worse work in the sods and worse work in the sods are received thom the strain the strain transporters the sods will near the former than the strain and 
COVERNOR FOR STEAM ENGINE, -A nOVEL

trailly it will not generate any more heat after the at all, at all, at all, at all and the solar and a condensed at the trace of a certain chemic cal action within the soda itself. When the soda itself, which is some become saturated it must be used again. The regenerating process before it can be used again. The regenerating process before it can be used a spain to run the ordinary entries more beat that to run the ordinary entries more the start and a condition of the soda motor is not economical.

The advantages to be derived from a soda mober or steam is allowed to escape. It may be be in the fact that no fire is used and no rates to any place where the streets, in tunnels, or steam would be especially objectionable.

In the soda motor experimented upon here, the boilers were designed to lurnish steam to erases the size of the cylindral, which they decided to use low pressure and investment, increasing the boiler capacity. Hence the boiler were designed to lurnish atternance or any high pressure to small cylindrae, but they decided to use low pressure and increase it is not the difficulties and chose of the soda motor and regenerating the bridge the soda from the this the difficulties and regenerating of time.

In addition to this the difficulties anrrounding save endless trouble, so that the upshot of it in the contine of the difficulties and regenerating of the soda where the continual control is all that had been done.

hydrogen, 3 of nitrogen, 5 of ethylic hydrate, I do dolefnet, gas and the remaining 2 of oxygen, and other profits gas and the remaining 2 of oxygen, carbonic cacid, and carbonic oxide. The gas found at Findlay, O., another prolific gas-field in the northwestern portions of that State, analyses thus: Marsh gas, 93, nitrogen, 4; by-drogen, 2, and the remainder small portions of Pittsburg gas the heat units are calculated at the other gases above mentioned. In 100 litres asks of comparison, in the same quantity of Sienesse, of comparison, in the same quantity of Sieness, of comparison, in the same quantity of Sieness, of comparison, and the same quantity of Sieness, of comparison, in the same quantity of Sieness, producer gas, at 113,000. In generating power to from 80 to 183 pounds of distensive policies and the same carbinates and coal equal in heating power to matural gas. The later explodes violently when mixed with 9 to 14 parts of str. When burned with pure oxygen, the fame temperature of the natural gas is estimated at 7100 degrees outliers. When the natural gas is estimated at 7100 degrees outliers are estimated at 2333 degrees centifyrade at the same temperature at the secure perfect onen burned with in the anough at the same centing at the same contraction and 1700 degrees centifyrade for matural gas, and 17000 degrees centifyrade for matural gas, and 17000 degrees centif

MEW TREATMENT FOR DIABETES,—The Paris correspondent of the London Loncet writes that, at a recent meeting of the Societe de Therepeutics, M. Martineau reported that he Therepeutics, M. Martineau reported that he had been treating cases of diabetes for the last 10 years, with almost invariable success, by a method he had borrowed from a practitioner to with or premature. The restingent is conclusions were not premature. The restingent is in the administration of a carbonite of lithia solution with arceniate of acadea, in acrated water, to the administration of a carbonite of lithia solution with his meals, the patient uses the sing this with his meals, the patient uses the sing this with his meals, the patient uses the sing this with his meals, the patient enes as a boverage when thirtes, begine as as a solution. NEW TREATMENT FOR DIABETES. - The Paris

carefully mix one dozen thoroughly beaten egge. Into this sift and mix a sufficient quantity of fine Graham flour, to reduce the same to a consistency which will admit of its being rolled out very thin; then out into a convenient size, and dry under a very low heat antil the moist auticient heat for drying. This preparation may be eaten dry, or it may be curmbed into a sufficient heat for drying. This preparation may be eaten dry, or it may be curmbed into a sufficient heat, when it makes a very palatable of hot water, when it makes a very palatable from weight than one preparation that way will probably furnish more nourish.

any other manner.

OLO PARILY IRON WORKS.—Among the mondatains and hills of Pennsylvania, out "iron State," the furnaces and works whose origin year in the long ago of America gather each year an added picturesquences from the fact plats they are being rapidly superseded by more modern establishments. Stock companies on modern establishments. Stock companies on modern establishments. Stock companies on properties which have been handed down from penses or the bear down from parties of the other parties of the farth and Hannes, with its outlous to trace up the call Hannes, and the other parties of the trace up perchance in has now almost died out the family name, but the works long since bore the family name, but the one or two maden ladies, of antiponer, "none possessory," but time has wrought the obsessory," but time has wrought obsessory, and one of aughters of the themselves or appears as a baptiemal prefix to the may be one or two maden ladies, to any possessory," one possessory," but time has wrought themselves or appears as a baptiemal prefix to a new preferers in the dear old Juric by the clam, and in a specific or one, which represents the search of the clam, and old a new of the clam, and old the time anamers and fancies give way to the modern time.

HARDEMING AND INCOMENTAL TEMPERING.—What is the theory of bardening liquors? To see the effect depend upon cooling shore, and the speed with which it is done? If that is the speed with which it is done? If that is the seed, with which it is done? If that is the case, there is the case, in the waster to make tempering seem there is a seed that is the contact with the long seem of the seem there will be in contact with the hot liquids. As the boiling point is relied the less steam there will be in contact with the hot liquids. As the boiling point is relied the less shout bardown will be in contact with the hot hardening when he was young, fells about bardown of the was just because the long seed a light seed in the following of himself when he was just because the long point it on top of the almost that the frough one end of the about the one of the sarvil was hot be put it on top of the large the case one of the sarvil. The stream had a two-foot head shove the bottom of the flume. Now he 'had above the bottom of the flume. Then he tried again, and when the sarvil was to see. Then he tried again, and when the sarvil was to see. Then he was just to see. Then he tried again, and when the sarvil was to seed only wish to see. Then he tried again, and when the sarvil was to the dumped it side down, point up wish to see. Then he sarvil the sarvil as hard as any that any one had some think the result! He was foolish each the dumped it side down, point up with the result? He was foolish enough to do with the result? He was some other cause at ference in the quantity of the waster have to do with the result? He was some other cause at the case of the was right.

THE CANDLE FLAME tends upward; its hot gases and the survounded heated air rising in a vertical atream which illustrates the universal bendency of warmed air. No matter bow it is and is pressed upward by that which aurrounds and is pressed upward by that which aurrounds draught: the temperature, length and size of the sir, column within the chimney. The various devices for warming are to be considered in a two-fold relation, as generating heat and affecting the breathing qualities of the air.

LOCOMOTIVE MANUFACTORIES.—There are 16 United manufactories of locomotives in the United States, axclusive of the shops owned by railroad companies. They employ about 14,000 mes and annually turn out about 2500 locomotives to be added to the number already in use. Without exception all these manufactories, at the present time, are overcrowded with orders. The business of the country in many places is fairly blocked, from the lack of ears and locomotives to move the freight which is presented.

A MOVEL MONUMENT FOR GEN. GRANT.—A grand monument for General Grant might be eread monument for General Grant might per detected from a grante shall feet long and 10 feet Vinal Haven. It is 115 feet long and to read on gquare at the base. Its plain abatt reared on the would better serve the purpose of indicating the site of the simple-hearted soldier's grave than of the prefentious and unartistic monumental designs as aubmitted to tardy contributions in New York.

LARGE BRIDGES.—One of the big bridges of the world will soon be ready for treffic. This is the iron railroad bridge across the Missouri, a few miles below Kanasa City. It is 7392 feet long, is 50 feet above high water, with towers reaching to a hight of 200 feet.

## USEFUL INFORMATION,

A FORTURE IN AN ACCIDENT.—A rather laughable story is that energy the origin of blue laughable story is that energy to control in the of paper, once so muod in voges of room manufacturer, named William Back, going into the factorial uses. The wife of an Faglish paper meruial uses. The wife of an Faglish paper manufacturer, named William Back, going into dentally let the back and its contents fall into a content later hand, scori-dent, and content is either to accident, and said nothing about it either to accident, and said nothing about it either to accident, and said nothing about it either the content in the part of some of the hands. He was the out, while the master was the content of the manufacturer of some of the hands. The interference of segarded as gross carelesences of paper was regarded as gross carelesences to of paper was regarded as gross carelesences to all the to one of paper was regarded as gross carelesences of paper was regarded as gross carelesences of paper was disponed on the paper was accepted as a protect with the unitody paper was accepted as a protect of the manufacture of the manufacture, and was for the manufacture, and was for the manufacture, and was for the manufacture of the manufacture, and was for years the manufacture.

Science.

A NOVEL ELEVATOR.—A our ious elevator has been proposed to race in the Eiff-st tower, which here proposed to race in the Eiff-st tower, which highton. The tower is to be 984 feet high and high said none of the ordinary forms of elevators could be used with a steely. The plan proposed is to conserved in the interior of a cylindrical tower a construct in the interior of a cylindrical tower a spiral railway track, on which shall run a truck of the whole interior space. This cir. Occupying the whole interior space. This cir. I straiged by the latter's revolution. Motion is railed by the latter's revolution, Motion is replication by the latter's revolution. Motion is replication to the truck carries a double-decked car which diviven by a stationary engine of the truck, and these caple friction pulleys, which communicate their motion to the trucks through a worm-gear and profed by the wheels of the truck, and these rapid profed by the wheels of the truck, and these are only to be revolved by the worm-gear and be the car would not descend, and these to the salong consequently, it anything should happen to the salong anotion on the gear and solid repair of the gear and would then descend as long as motion continued to be given to the car would not descend as long as long is run as a high speed, which the gear to be is run as a long speed, which the gear requires a motion at thus it is possible to use quite a small asble to give motion to a car containing the gear in the descend and the small asble to give motion to a car containing and longer and the given to the given to the gear results and the given to the gear containing and the supplies.

MORE TROUBLE FROM TIM CRAS.—It is reported that in a cargo of oil in tins which recently artived at Calcutta from Mow York
nearly all the tins were lesky on account of
some new soid used with the solder that atscore have and a soon as the time were litted the oil
the tin. As soon as the time were litted the oil
literally poured out, and the greatest difficulty
was encountered in getting men to land the
oil, as a kerosene shower-bath in the sun is

the Dest ones, studeng not me 756-1001 [svet], and it for the rest ore ever found in the mine.

A STRIKE IN THE CAMAS FRACTION.—]ack Measures, who came in roday from the Gold Belt, states that yearerday, while doing the annual holding backer and the clamas fraction, adjuning the Camas Work on the Camas fraction, adjuning the Camas Work on the Camas fraction, adjuning the Camas Work on the Camas Most of the Camas of the Most of the Mos

JUBILANT OVER THE STRIKE.—General Roberta, who wished Electory to proceed to the cook of the Gate Chiy and Broaddroid deal very jubilant over the feet of high-grade or in the Gues of the Hills. It was made as a very strong depility of only 350 feet, although on the Thills. It was made as a very local condition of the Fills. It was made as a very a deal of only 350 feet, although on the Stochook of the man of the Manual China of the Manual Chi

THE LEAD BELT.—Inter-Idaho, Dec. 10: Mr. Mesgot of Era, from the Carbonate group on the bead of Antelope creek, gives us the following repeated to the short of some of the mines there. When we remember the some of the mines there. When we remember the short time that has elapsed since this lead bett was discovered, we shall see that the developments are very flattering and give fair promise of making this, as many old prospectors claim it will be, the liveliest camp in Idaho next year. There is the liveliest camp in Idaho next year, There is plenty of wood and water. The Cliff No. 1, Mesers.

C. A. STETEFELDT,

C. A. STETEF

We have here the Scamp Mail in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the rapidity (300 strokes each per minute) which they true. There are 4 shoes in each stamp, so plats there are 4500 strokes of the shoes on the dies per minute. Less power is required than in any other mill to do the same amount of work.

The Mortar has screene at both ends, giving ample discharge. There are no cams or tappped to wear or he adjusted. The stamps adjust themselves as the shoes wear.

AN AUTOMATIC ORE FEEDER

Goes with each Mill. We also have a suitable

Rock Breaker.

Several Mills are now in the mines doing excellent work. The "Economia" is not only a mill for small mines, but we believe it is destined to superseder the old stamp in mills or the Lagorat Oardonard.

#### Mining Share Market.

Stooks got rather a "black eye", this week, and went backward instead of advancing. There was no special reason for this break as and went backward instead of advancing face was no special reason for this break as the Comstook mines themselves are concerned. All the Virginis Enterprise says that Hale and Mortores has exposed twice says that Hale and Mortores has exposed twice say much ore as was shown at the time the stock sold for \$100. They now have at least \$1,000,000 worth of high grade or in sight, and the stock of the whole have at least \$1,000,000 worth of high. At the Segregated Belcher and Belcher and his har of the whole of the or reports are flactering, and the order the contained.

PASTERRIZING THE AUSTRALIAN RABBITS.—
It is said that Pesteur proposes to kill off the rabbits in New Zesland and New South Wales by turning loose among them a few of their own species incoulated with the microbes of oblicken-cholers, which, he claims, will breed so much faster than even the prolific rodents that the latter will soon be exterminated.

CIAMY FOR SECURING STERECTAYE PLAKES.

OILAMY FOR SECURING STERECTAYE PLAKES.

OLAMY FIRMEY, S. F. No. 374,667. Dated of such series everal means for classing the stereotype plate to its supporting bed in such a manner that the plate may be readily removed from said bed; but there are readily removed from said bed; but there shows the strick of the several methods.

The object of this may invention is to overcome the control of the series of previous fibe stricks of previous discussing the cadvantage of previous and more extensive has increased for better and more extensive ness. It will permit the use advantages, but will be as a peted for better and more extensive ness. It will permit the use of single blocks of an inexpensive obstactively of securing any streets on account of their chestocype plate of the practically the same size as the block; thereby particular and way with the necessity for variation.

Blower for STALSS. The STALSS.—Cear. J. Salands. J. Sackus, S. F. No. 374,384. Dated Dec. 6, 1887. This is a combination with an open representation with my manning size.

Backus, S. F. Mo. 374,334. Dated Deo. 6, 1877. This is a combination with an open it crone stove or grafe, of a vertically moving frome stove or grafe, of a vertically moving slide or plate, by which the opening may be olosed. The plate or ''blower." has projecting uge on plate-lugs may be supported when desired. The guides or obannels are curved outwardly at the bottom so as to throw the lower edge of the plate-lugs may be supported when desired. The guides or obannels are curved outwardly the blower toward the tothrom, when it is at its in the blower toward the from the blower toward the from the blower toward the forted may be supported upon any pair of steps at any pear of steps at any pear of steps at any of the interesting the from the ontirely out of the way, thus leaving the front of the interesting the front of the way, thus leaving the front of the interesting the interesting the front of the interesting the front of the interesting the front of the interesting the material front the material front the material cases to that class of driers for intil. MACHINE FOR MAKING TOR-CALKS.—John C. Kaled Judes against the Really, Austin, Nev. No. 374,631. Dated Dec. 13, 1887. This oalk-making machine consists essentially in a movable obised of cutter and as nuclerlying table or arvil provided with a gists essentially in a movable of the outside with a depressed portion and an elevated portion are day as a clevated with coming in the shoulder made by the elevated portion in the cutting edge of the outside in cutter. The invention further consists in out from the edge of the work. The elevated portion a recess to permit the calk to be drawn out from the edge of the work. The object is portion at the shoulder made by the elevated portion are elecated for the work. The object is chine for making toe-calks.

Mill.-Stock ferebra.—Clifford F. Kendall, according to the preparation of the consiste milliers of various kinds to rolls or rolls, pullifiers, etc. The stock of various kinds to rolls and accomplination of davices. There is a great accomplination of davices. There is a great accomplination of davices. There is a great accomplination to consider the patent covers construction and a commine the area from the factor of davices. There is a great area gener to the rolls or other in a strangement of the patent covers construction and a commine the patent of davices. There is a great area from the fall takes about its lowes tor of elivery edge as a compliant of the rolls or other in a strangement of the patent of davices. The stocker and available is so that when the longer and even altered and broken up as to avoid all imarps.

Commine of W. Peck, San Luis Obispo.

Construen Blacking Brush and Blacking Boxering Boxering Box.—George W. Peck, San Luis Obispo. No. 374,696. Dated Dec. 13, 1887. This invention consists in a breah, the frame or effock of which on its back is provided with a spring metal plate, forming a clamp, and a spring metal plate, forming a clamp, and a

He traced the history of the art, showing that the traced the history of the professions. He traced the poldest of the professions. He traced whe had been accomplished with iron, used in manutateruring a nail and a locomotive; with cost, of which 400,000,000 tons are mined with perfoleum, "the world's and vith perfoleum," the world's said, the greatest beginner has overcome, he said, the greatest obstacles; rivers, mountains, and oceans have alleged to him. He then and oceans have alleged to him. He then the hord Cenis and SE. Cotentains, and oceans have alleged the practice of the Month of the said. "The median is not only unique, but a briefly described the latter, "the approaches to stroke of genius."

The mechanical engineer, Mr. Babcook, said, but a succession of the Pharache and irigates but a latter of the Pharache, when Barr Morbaly in the time of the Pharache, when Barr Morbaly in the time of the Pharache, when Barr Morbaly in the tiver of the Pharache, when Barr Morbaly in the time of the Pharache, when Barr Morbaly in the tiver of the Pharache, when Barr Morbaly in the tiver of the Pharache, when Barr Morbaly in the the Wile Them.

[From our Special Correspondent.]

Proceedings of the American Society.

Месбаліса Евдіпентя.

A MUSHROOM PLANTATION has been established in a disused railway tunnel at Edinburgh. The mushroom beds occupy about 800 yards of the tunnel, whose total length is about three-quarters of a mile.

Since and power of the blastechine and long size and power of the blastechine and mind and which were, at that the ability and the blastechine and bloom on the blastechine and bloom on the bound of gluonite have been hauled from the a distance of 80 miles, to ship away. Thirty-four thires are of 80 miles, to ship away. Thirty-four carloads, or nearly three-fourths from whence it has been seint to make that of manufacthas been seint to make that of manufacthas and such as been seint of the that of manufacthas and such as been seint send that of manufacthas and such as the state of the person of the thirty of the

modifications as experience should prove necessing the modifications as experience and proved modifications as experience should prove necessary.

Before the furnace was entirely finished I was called out of the country, and was absent done in a way very different from what was underplated in the planning of the furnace. Indeed, it was all done from one side. Ore, the throat. Naturally, there was eastfolding and out the amount of fuel consumed and dux were dumped into one segment of the amount of fuel consumed and dux west the only trial with the cyling and the amount of fuel consumed excessive; the furnace soon became deformed, was uneven, and the amount of the furnace of any other of such effect a short campaign, was put out of along the furnace of any other. It proved that a furnace of any other of such form would fail with neother the other of such other furnace of any other. The subsequent exceptional performance of the furnace on any and the furnace of any other furnace on the furnace of any other was not an unnuant of any other furnace, and to the formation was any of the furnace of any other furnace, and to the great proportionate also and power of the plast-engine and boilers, which were, at that that there are the only only which were, at that that there are the order of the plast-engine and boilers, which were, at that the at that the at the thine at least, unnaual.

difference of the formation of the following of the following oncolusions from comparisons of refliger with the following from the following paper, the season and following from the fo

rection was in the form of a communication to the society, by James E. Wells of Quincy, Plumas Co., Cal. His remarks were as folin the transactions of the institute. The cor-12th, was cited the experience at the Midland blast furnace. There were some errors which were corrected when the paper was published shove subject, published in the PRESS of Nov. In the extract from Mr. Walsh's paper on the

#### Irregularities of the Blast Furnace.

the days of the prospector are employed in drillling and picking, inekead of simbestly wandering
over mountains and through guiches and parks
which an eye to the next good camping place,
the season and so the next good camping place,
has disappeared from view. Then, too, the
depth of the sheft or length of the tunnel must
best witness to the amount of work done, and
not a meandering line drawn over a soiled map,
to abow an alleged traveled route. No, the

To Know Pure Gilling.—A solution of the coloride of copper will show the difference between gilding for which gold has been used the gilding with alloys of inferior metals. It is said gilding; is imitation gold, a brouch of the solution gives a black mark, copper separating solution gives a black mark, copper separating solutions gives a black mark, copper separating burne metal no discoloration cocure. The test call with a solution or or interts of silver, the first of which gives a brown aport, the answer gold goods of It start gold do not nitrate of silver, the first gold do not change their color with nitrate of silver, Lesf. gold is tested by being shaken up in a closed change at no alteration, while "heaft gold is tested by mills of silver, Lesf. shottle with any being shaken up in a closed bottle with any wills "while "heaft gold with a pottle with any being shaken up in a closed should be solved while "heaft" lesfer gold gold to bottle with any baing while "metal" lesves grow gradually black.

To QUENCH THEST.—A physician writes to a contemporary that ice-water does not demond a contemporary that ice-water does not quench thirst, but increases it. "I remember a little story," said he, ""which, I think, might do much good, if published during the hot water good, if published during the hot water that I heard from an old sailor. He said that is suppreceded companions lived for days on three pints of water, and were not a bit thirsty. When I saked him to water down, they each took a teaspoonful and water down, they each took a teaspoonful and gargled it well in their mouths. It say one wall quench his thirst as effected we are until that the experiment, no matter mouth with not over a tablesononful or water, he will duch the thirst the contently as a quart of water heatily swallowed, and will not that it of water heatily swallowed, and will not that the furth with were the well in the forth of the cash during the heated seeson are, if the dearth suring the heated seeson are, if the transfer were the cown, directly or the teach were known, directly or the theory of the wester."

MARING A PAIR OF SHOES IN LESS THAN ONE MACHING A PAIR OF SHOES IN LESS THAN ONE HOUR AND A HALF. ". "Yes," said the propriet for of one of the largest shoe manufactories in the oity of Portland, Me., "it doesn't take long to make a pair of ladies' shoes. Some time sgo a gentleman and his wife walked into our factory, and in just one house waring a pair of the forty, and in just one house waring a pair of the shoes which were made for the from the scook while shoes, which were made for the from the scook while set of machinery. These acts of machinery and passed through the lands of the different operatives at their manifes ever of machinery. The shoes shoes at their manifes of the different operatives at their manifes of the different operatives at their manifes (600 pair of shoes in a day, or one pair of shoes per minute, That is six pair of shoes per minute. That is six pair of shoes to a machinery."

ARTHOIAL QUINIER.—The British and Colonial Druggist has investigated Dr. Hewitt's olding a sar artificial quinine manufacturer, and claims as an artificial quinine manufacturer, and nes arrived at the following conculation: The act outcome of all the inquiries made is what ascens to be conclusive evidence that Hewitt is not making artificial quinine here or elsewhere; that he has never made any; and that he has rever made any; and that he has received considerable aums of money for the with which, having procketed the cash, he refuses to proceed. This supplies the motive, the amount of Hewitt in the earlier stages of his nucleit of Hewitt in the earlier stages of his career as a "discoverr." Bosn.—A New York scientist says that the earth's polar ice is penetrating the interior of reaches the furthere will be an explosion that will split the world into pieces too small for truck patches. A PLUMP ARM.—A meager, skinny arm is objectionshie, not only because it offends against all conditions of beauty—plump roundeness, softness, fresh color, smoothness, gradual sepering to the wrist—but because it is associated with the sepert of old age and disease; and, again, because it suggests man's kinship to the age. Sweeping is excellent exercise to program, again, because it suggests man's kinship to the aduce a plump arm. Three hours of housework if she wears thimbles on her furgers and sleeps with her bands in gloves lined with cold cream, with her bands in gloves lined with cold cream, violin playing has a tendency to make pretty plump, with a searcily observable depression over the joints. The fingers taper gently, and plump, with a searcily observable depression over the joints. The fingers taper gently, and over the joints. The fingers taper gently, and to make a soft, clear skin. Lemon removes to make a soft, clear skin. Lemon removes the little and the search of the stands in the wash as a soft, clear skin. Lemon removes the stains.—Christian at Work.

OMARA MINING WORKS.—Grass Valley Union,
Dec. 221. The new hoising and pumping works of
the Omaka and Lone Jeck Consolidation attented up
yesterday, and was made the occasion by many
yesterday, and was made the occasion by many
well-wishers of the enterprise being present to congranulate Superintendent Mainbast upon the auspicious event. The machinery is driven by waster, and
Pelton wheels are used for power, and everything
pumps will drain the mine in a few weeks, after
pumps will drain the mine in a few weeks, after
pumps will drain the mine in a few weeks, after
which the work of drifting and stoping on the vein
will be commenced.

THE GENERAL GRANT.—North San Juan Jisses,

to be only a small stringer, but very rich. Now it base the seperatence of widening out to a good-sixed base the specience, a few hundred feet farther down stream, Milton A. Baugh, one of the most persevering of good ore. A few hundred feet farther down stream, Milton A. Baugh, one of the most persevering of properties as new find that looked or a father down and near the junction of Canyon creek and the Cauth Yuba viver is the Washington creek and the South Yuba viver is the Washington maine and milling at their full capacity—so work so the good-paying mines of it bids state the pure state of the good-paying mines of it bids state of the properties which have made several starts and state of the properties which have made several starts and out died singer with the properties which have made several starts and outside inprovements. The work now will be stopwork so far hear all been what is called deadwork work so far hear all been what is called deadwork subgesting by the party that is going to work it. The base is the properties which has been so much preside the party that is going to work it. The base is the present time an unlimited amount of the most acceptable present time and reditors. It is good ore in sight, is yet standing tide on secount of the present time and the second of the present time and the second of the present time and the second of the properties of the management of the good of all independence of the management of the present ti

scarcity of water, only ten stamps are running. The mine, however, is being thoroughly developed, present mine, however, is being thoroughly developed, present search starting of the entire number of samps Seco, who took out as poolever of good cor two years are good for a huge distribute, the present set of believes, from independent of the control of the search starting search of the search of the control of the search of the sear

ALPHA,—The work of sinking the main shaft to the level with the Sutto tunnel is progressing well. BULLION.—Good progress is making in sinking the shaft from the 300 to the 500 level. Porpayry.

SCORPION.—On the 300 level the south drift is advanced a8 feet, and the north drift 39 feet in the advanced a8 feet, and the north drift 39 feet in the POTOSI.—The mill is doing good work and the ore is averaging well. A great deal of ore is opened and ready for mining,

OEST.—The lower levels of this mine are showing much right over levels of this mine are showing much righ of some new developments having lately much righ ore. HAYWOOD.—Much fine milling ore is being taken out from the several ore-producing sections. A good surke was made as few days ago in a drift too feet below the tunnel level.

YELLOW JACKET.—An average of 300 tons a day is being shipped to mills on the Carson river. This ore is being shipped to mills on the Carson river. This or is being shipped to mills on the describe the too levels.

BEST & BELCHER.—On the two level the east crosscut near the north line has been extended 46 etc.; total, safe feet, This crosscut continues in porphyly.

EXCHEQUER.—On the 122 level two crosscuts are being run just north of the line of the Alpha. The north drift on this level is fast nearing the south line of the Bullion.

Segregated Beligher.—The ore body that is soing explored by an upraise and crossout at a point to love well so fevel above the 1300 level continues to look well

GOULD & CURRY.—On the 425 level, from the pot the upraise in the east curoscout, a west drift is been advanced eight feet, and as south drift as a. This drift has been showing streaks of good

CROWN POINT.—The southwest drift on the Goo evel has not yet reached the point where it is ex-pected to cut the body of good ore found on the evel above. The crosscut on the 300 level has cut ow-grade ore.

UTAH.—On the 478 level the north drift from the and of west crossout No. 6 has been extended 36 leet, This drift has been extended 36 vein porphyry, clay and quarts. During the coming week will start an east crossout.

SIERRA NEVARA—On the S20 level the southwest drift than the main north drift has been advanced 45 feet and is now out a total distance of into feet. It still shows a mixture of clay and purity on the west side.

CHOLLAR,—Good headway is making in the prospecting drifts on the 650 level; also in the sinking and timbering of the incline. The usual amount at ore is being extracted, and all the ore-producing sections are looking well with much ore in sight.

SERRA MEMBA.—On the seo level the sufficient in the continuous and the sufficient in the continuous and the sufficient in the sections are looking well with the seo level the sufficient in the section and the sufficient in the section and the sufficient in the section and the sufficient in the sufficient

ALTA,—Ate extracting ore from the 785, 885 and 1150 [evels. The mill is crushing an average of 24 ons a day. There are in use four Frue concentrations as a day. There are in use four Frue concentrations is will be necessary to put them through a roasting turnace.

NEADA.

Weahold is Chievary.

Weahold is Chievary.

Weahold in the vein, and will extend it northwest to connect the vein in set a child northwest to connect in the vein, and will extend it northwest to connect stated a drift south on this level which is in fair ore.

Bullion Shipments.

The stock market has continued dull and inactive. Halle & Wortones and one or two others have shown some little advances, but otherwise there has been iltered for deveroes and one or two others have shown its of interest to record. The Virginis Embergh no says: The people are losing their sacceles through no says: The people are losing their sacceles through no deterroration in the value of the mines pleaselves, but simply because of their own greediness and the though they know that at the first decline of price, though they know that at the first decline of price, though they know that at the first decline of price, though they know that at the first decline of price, though they know that at his first decline of price, a rival broker to be slaughtered. The broker who honest advice in regard to this light margin business would win in the long run.

The big fash are barings a regalar holiday least of honest advice in regard to this light margin business at saccks at almost their own prices, and in less than two weeks lokey will be ready to again start everything booming.

In the mines all is looking well—better than when the highest prices we have had this winter were rulines the mines all a mines all an interest in the lower levels.

In the mines all is looking well—better than when the highest prices we have bad this winter were rulines. There is no trouble in the lower levels.

Mining Share Market.

REATED.—Jacksonville Times, Dec. 23: Anton Rose and Win. Crow have rented a portion of Gameron & Ennis mines in Galice creek district, and streek district, and streek district, and streek district, and con & Ennis mines in Galice creek district, and Cheek, who has some of the best placer mines in beginning to the case there is plenty of it. Work is properly a feedly and will operate long of the resing steadily and quies asiafactorily at Coulter & general greatils and construction of the way. The Wagner creek quarts are being crushed daily at the mill, with has suspended operations temporarily, but prospecting of the nines is still under way. This promises to be one of the best groups in the State, Messre Engaged in the development of the Wagner creek Engled and Brentano of Evanaville, Ind., who are Engaged in the development of the Wagner creek mines, paid this section a visit during the week. They seemed satisfied with the work which has been mines, paid this section a visit during the week. They seemed satisfied with the work which has been one gate of the best floors and may conclude to continue it on a sleger done, and may conclude to continue it on a sleger continue of the case of the best floor. It will require the expenditure scale than derelofore. It will require the expenditure of large sums of money before any returns are made.

OFEGON.

ORE AND BULLION SHIPMENTS.—During the past ten days the Greecent shipped 80,685 pounds of first-lease ore. Our the toph inst, 8 bars of Day bullion, 8588 fine ounces of silver, were shipped from the Mersec mill, and on Thursday the product was 6 silver bars, containing 7859 fine product was 6 silver bars, containing 7859 fine ounces. For the week just ended the Mackintosh once, 233,640 pounds of Dayy ore; lotal, 423,300 ore, 133,640 pounds of Dayly ore; lotal, 423,300 pounds. This morning the Ontario shipped 45 pars of bullion, 21,401.89 fine ounces of silver.

IMPROVING.—Silvey Bell, Dec. 17: One of the McMillen group of mines, the Hannibal, has lately above such states of improvement, conclusively proving that the grand mineral ledge on the original mines are located is decreased to be one of the foremost producers of silver when sufficiently opened. More light has been brought into the construction of the vein lately than for years past, and apparently with good results. MORK.—Prescolt Courter, Dec. soc. Now that copper is high and likely to get higher, miners are marked and likely to get higher, miners are miners and many others, whose equals do not we want to see a thousand or not we want to see a thousand or not we want to see a thousand or more miners taking our copper, not only in mines we have mentioned, but in Copper Basin and elsewhere. Mining Turbine Water Wheel. JAMES LEFFEL'S

These Wheels are designed for all purposes where limited quantities of water and high backs are utilized, and he generated to get more power with less webr than any other wheel made, Being placed on horizontal shaft, the power is transmitted direct to shafting by holes, dispensing with gearing.

Estimates furnished on application for wheels specially built and adapted in capacity to suit any particular case.

Enther information can be obtained of this form of construction, as well as the aring the construction, as well as the collaborated form of the construction, and the construction of the construction as well as the polynog to the manufacturers.

DOORFE "ECONOMIC" STAMP MILL

We have here the Stamp Mill in a cheap and simple form. The high drop of the old stamp is more than compensated for by the great weight (1200 fbs. each) of our stamps, and the repidity (300 extokes each per minute) with which they run. There are 4500 strokes of the shoes on the dise per minute. Less power is required than in that there are 4500 strokes of the snees mount of work.

The Morter has screene at both ends, giving ample discharge. There are no cams or tappets to wear or be adjusted. The stamps adjust themselves as the shoes wear.

AUTOMATIC ORE FEEDER

ROCK Breaker, Goes with each Mill. We also have a suitable

Several Mills are now in the mines doing excellent work. The "Economic" is not only a mill for small mines, but we believe it is destined to suversede the old stamp in mills of the language capacity.

ADAMS & CARTER, Agents Frue Vanning Machine Co.,

VAUNING MACHINE. OE OBE THE FRUE CONCENTRATOR

# FIVE HUNDRED AND FIFTY DOLLARS

Room 7, No. 109 California Street, . .

The present improved form of the celebrated "Triumfie" Ore Concentrator possesses many advantages over any other style of Vanners, Vanning Machines, or Concentrators, yet introduced to the notice of mining men. These advantages consist in the superior features which enter into their construction, and facilitate their operation.

They are constructed in the best manner; their trames being of fron, insures their solidity, durability, and perfect quire in constructed in the best manner; their trames being of fron, insures their solidity, durability, and perfect quire less freight space in boxes, by which their cost of transportation is reduced, and occupy less mill room when set up.

An important improvement has recently been introduced into their construction, which consists of a litrer of transportation is reduced, and occupy less mill room when set up, placed in front of and which takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal motion which is imparted to this takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal motion which is imparted to their take one their construction, which takes the discharge from the feed and amalgam bowl. The improvement is in the reciprocal motion which is imparted to the first from the feed and amalgam bowl. The improvement is in the respire is at the cash of the United States, bearing evidence of the efficiency and superiority of this form of Concentrator, and we shall be pleased to send Oirculars covering such letters of testimony, and, as well, directions for setting up and operating these of so send Oirculars covering such letters of restimony, and, as well, directions for setting up and operating these to send Oirculars of or quote special prices for any considerable order.
